Fresh Vegetables Priceless For Flavor and Health Value

EVERY private estate has a vegetable garden. At the big flower shows, private gardeners exhibit marvelous collections of vegetables grown to perfection.

So far superior are freshly harvested vegetables in flavor and tenderness to those which can be purchased in the market, that most estate owners allow no green vegetables to be served on their tables which have not been grown in their own gardens; and competent gardeners are expected to provide a constant succession of crops to supply the table.

Any garden owner who has room for a vegetable plot, and who neglects his opportunity should carefully consider whether the use to which he puts his land gives returns in pleasure and health to himself and family equal to those which a vegetable garden would give. If you have any doubt about it ask your doctor what he thinks.

The importance of fresh vegetables in the diet has been demonstrated by medical research, which is even now only at the beginning of its task. Every year new information is developed as to the effect of diet upon health. One of the recent discoveries is that tooth decay is checked by a plentiful supply of vitamins. Studies are now being made to determine the effect upon vitamin content of staleness in vegetables. While there has been no definite finding on this point as yet, the impression is strong with students of dietetics that in general there is a loss of vitamin content beginning as soon as vegetables are harvested and continuing progressively unless checked by cooking or refrigeration, until decay appears.

Fresh vegetables are especially important to children, because of the vital part which vitamins play in growth. There is seldom any difficulty in persuading children to eat vegetables which they have seen growing, and which they can help select from the garden. And the spinach, carrots, lettuce, and cabbage which are home grown have a tenderness and flavor which is as welcome to the child as to the adult.

Following the war garden period, during which home vegetable gardening was expanded in this country to an unprecedented extent, there came a time when to some garden owners it seemed that growing vegetables at home was too much work, or if they employed labor, too expensive; or perhaps that flower growing was more fun. But now a definite swing back is being noticed. Labor costs are down. Work in the vegetable garden can be reduced to a negligible amount (if one would reduce the work) by the use of paper mulch. (See Page 105.) But above all, an appreciation of the superior table quality of home grown vegetables, and an understanding of their health value, are beginning to spread.

Country and suburban life today is chosen deliberately by those who seek a manner of life which is impossible in city apartments. They enjoy the fresh air, spacious surroundings, and the fun of gardening, and other outdoor activities. The pleasure of eating freshly picked, finely flavored vegetables from the home garden is one of the important rewards of country or suburban living, which gardeners who drop their vegetable plot a season or two, soon come to realize more keenly than before.

So please consider most carefully this year devoting some of your garden space to vegetables.

Mr. Cropp Recommends these New Varieties of Flowers from Seed

MR. CARL CROPP, vice president of Vaughan's Seed Store, who has been in charge of our flower seed department since it was founded, is known to flower seed producers all over the world. He in turn knows every flower seed producer of note in this country and Europe, and keeps informed about their methods and their latest productions by periodical trips of inspection. Mr. Cropp passed last summer in Europe where he completed selections for the list of novelties which are described on pages 1 to 6 of our 1931 catalogue.

From Mr. Cropp's notes we have selected ten varieties, five annuals and five perennials, which he especially recommends. They are described below as he has reported upon them, and for those who wish to try them all, special collection offers are listed below.

Special Offer A 1931

1 pkt. each of the 5 Annuals listed on this page for..... **\$2.00**

Special Offer P 1931

1 pkt. each of the 5 Perennials listed on this page for **\$1.00**

Annuals

"ASTER (941) Surprise Salmongold. When starting to flower the blossom is a pure salmon-yellow color. The fully developed blossom shows a radiating salmon-pink shade. The blossoms resemble the Peony flowered type with the long stems of the American Beauty. Each plant carries on the average of 40 to 50 blooms and the cut flowers remain in water fresh from two to three weeks. Pkt. (about 50 seeds), 35c.

"PANSY (3792) Maple Leaf Giants Mixed. A distinct variety which we have only been able to offer privately heretofore. It has large leaves and flowers of giant size and substance with a wonderful color range. Has been grown by a few of our North Shore gardeners who have secured prizes when exhibited at shows. Pkt. (100 seeds), \$1.00.

"PETUNIAS (3945) Double Shepherd's Pride. True salmon pink of peony flowered type, flowers 4 inches in diameter and will produce 50% double flowers. This is a marvelous new color and one of the prettiest yet produced. Very compact grower and a profuse bloomer. Pkt. (120 seeds), 50c.

"SCABIOSA (4727) Loveliness. Is unsurpassed as a cut flower. It has long, stiff stems and a delightful fragrance, but its crowning beauty is its glorious salmon-rose color. Pkt., 25c.

"ZINNIA (6016) Crown O' Gold, derives its name and distinction from the fact that each petal of the flower is overlaid with a deep golden-yellow at the base, while carrying out the individual flower color at the tip. The color range comprises the more popular shades; including old rose, cream, yellow, carmine and burnished red. Pkt., 25c.

Perennials

"ASTER (7228A) Sub-Coeruleus Star of Eisenach. A new giant flowered race of these popular spring Asters. Bright lavender-blue Marguerites with yellow-centers measuring more than four inches across and in flower end of May and June. Pkt., 25c.

"CARNATION (7396) Grenadin Tausendschon. This new variety shows a wonderful play of color, from soft rose and salmon rose to bright pink. Brings a high percentage of double flowers. Pkt., 25c.

"GAILLARDIA (7812) Burgundy. Shining wine-red flowers about 2½ in. in diameter, on long stiff stems, from June until Fall. Blooms from seed the same year, if sown early comes 60% to 70% true from seed. Pkt., 25c.

"HOLLYHOCK (8008) Double Imperator Improved. 4 to 5 ft. Flowers measure 5 to 6 in. across with an entirely new formation. The blooms are composed of a very broad collar of frilled and fringed petals in many attractive shades; very vigorous branching type. Pkt. 25c.

"ICELAND POPPIES (8276) El Monte. This is a deep tangerine orange selection from some giant Australian hybrids. The flowers are of enormous size, borne on long wiry stems. Novelties and Specialties of 1931

ON this December day, when our catalogue goes to press, our 1930 gardens are happy memories of the past and our 1931 gardens pleasant dreams of the future. To make these dreams come true we must have faith and the ability to work. These will endow our gardens with the spirit of success. Novelties add beauty and increase the interest in a garden. We are specially fortunate this year in having four of our staff in Europe and many on this list are the net result of their travels. May we suggest you select as many as possible for your 1931 garden?

ACROCLINIUM ROSEUM

166 **Double Giant Mixture.** These pretty graceful flowers are too little known in American gardens; they are attractive in bouquets and may also be dried like *Helichrysum* for winter decoration. This large-flowering type is twice the size of the old one, with long stiff stems; flowers are double and semi-double; white, chamois, flesh color and bright rose; about $\frac{3}{4}$ of the seed will bring the large-flowering type; the smaller older type is also attractive. Pkt., 25c.

AGERATUM

196 **Mexicanum Nanum Compactum. Blue Ball.** New deep, dark blue. The plant is dwarf and symmetrical in shape and when in full bloom the foliage is literally covered with small flowers giving the appearance of a closely formed blue ball. Pkt., 15c.

197 **Mexicanum. Venus.** Forms a dense bush about one foot high (varies) which is profusely covered with flowers. The buds are red, the petals are white and the center of the flower red; a plant in full bloom is very charming. Pkt., 25c.

CACTUS

In view of the great interest in Cacti at the present time, we are offering seeds of some of the most popular types in mixture, and a few of the better known varieties separately; also a collection of ten varieties in separate packets.

Cacti can easily be grown from seed and it is an interesting pastime, each miniature plant being as perfect as the parent, and most of the varieties offered developing comparatively fast. The seeds germinate irregularly, over a period of from 14 to 40 days. All the bags have cultural directions.

We also offer a booklet "Cacti in the Home" containing much valuable information on Cacti. Price, 25c.

Novelties and Specialties of 1931

ASTER Giant California Sunshine

ASTER

559 **Giant California Sunshine Mixed.** They are the result of a direct cross between the now well-known California Giants and the dwarf, much-branched Sunshine type, hence the name. Plants of this new race grow 3 feet high and bear blossoms on long, stiff stems, admirable for cutting. The individual blossoms are enormous, 4 to 5 and 6 inches in diameter.

With the disk a lovely light-yellow and the encircling guard petals varying shades of Enchantress-pink, apple blossom, deep-rose, blue and lavender, there are produced color contrasts at once startlingly beautiful in the ensemble, stamping this glorious new strain as one of the outstanding acquisitions of modern times to floriculture. 500 seeds, per packet, \$1.00; small packet, 200 seeds, 50c.

601 **Heart of France Wilt Resistant Strain.** The same variety as listed in our colored section only these have proved themselves absolutely free from the wilt disease, having been grown in the sickest of soils successfully. Pkt., 25c.

606 **Lemon Ball.** Most distinct yellow aster, a light canary yellow, quilled and so double that it has the appearance of a perfect hemisphere; very lasting when cut, and the plants remain in bloom for a long time; upright growing; 20 in. Pkt., 25c.

646 **Scarlet King.** The most beautiful and distinct of all red Asters, more brilliant even than Heart of France, blooms profusely and lasts long when cut. 20 in. Pkt., 25c.

934 **Swan's Down.** An enormous white peony flowered Aster. Flowers beautifully incurved about $4\frac{1}{2}$ to $5\frac{1}{2}$ inches in diameter with straight, rigid stems non-lateral branching. Pkt., 35c.

935 **Maiden's Blush.** A sister of the above only the flower is a lovely shade of soft appleblossom pink. Pkt., 35c.

941 **Surprise "Salmongold."** An entirely new color and new form. When starting to flower the blossom is a pure salmon-yellow color. The fully developed blossom shows a radiating salmon-pink shade. The single blossom is $2\frac{1}{2}$ to $3\frac{1}{2}$ inches in diameter, of a noble, circular form. The blossoms resemble to a certain degree the Peony flowered type with the long stems of the American Beauty. Each plant carries on the average of 40 to 50 blossoms and the cut flowers remain fresh in water from two to three weeks. This is one of the outstanding novelties of the year in asters. Pkt. (about 50 seeds), 35c.

929 **Victoria Micaela.** Salmon-pink, overspread with white. 20 in. Pkt., 25c.

CHRYSANTHEMUM

Should be grown in hanging basket or in a pot set high to allow the plant to develop to full beauty. Pkt., \$1.00.

1660 **Coronaria Nanum Single Coronet.** Flowers cream, edged lemon. Flowers last very long when cut and are charming in combination with blue corn flowers. Pkt., 15c.

COLEUS

1863 **Large-Leaved Dwarf Mixture.** The Coleus are grown for brilliancy of their foliage rather than for beauty of flowers which are insignificant. This variety is dwarf in growth which makes it a good pot plant. The coloring is very attractive with many shades and tints of yellow, copper, red, white and green. Pkt., 35c.

COSMOS

1956 **Early Express Pink.** An extra early Cosmos flowering in from 45 to 50 days from the time seed is planted. Plant grows about $2\frac{1}{2}$ to 3 ft. high and is covered with medium sized bright pink flowers. Pkt., 25c.

2886 **Ornamental Grasses** (12 varieties) in one collection for 50c.

DIANTHUS

2250 **Sweet Wivelsfield.** This is an outstanding novelty of easy culture. It is the result of a cross of the Dianthus Allwoodi on the Dianthus Barbatus. The growth is not unlike the Sweet William but the flowers are larger and it has a much wider range of color. Besides retaining the brilliant coloring of the Heddegi strain, which was one of its ancestors, it has many of the dainty markings of the same. Some of the flowers have a honey perfume. Blooms the first year from seed. Secured a Reward of Merit at Wisley. Pkt., 25c.

ESCHOLTZIA

FREESIA

2456 **Hybrida Tuberengii (Cross between Freesia Leichtlini, Freesia Aurea and Armstrongii).** Richest shades, very large flowering hybrids. Sow seed beginning of April in pots or flats in a mixture of good hot-bed soil and rotted sod. These flats are placed in greenhouse or hot-beds. With a temperature of 10 to 15 degrees the seed will germinate in 4 to 6 weeks if the watering has been properly taken care of. When the seedlings are of sufficient size to be handled they are pricked off in pots or flats or placed $2\frac{1}{2}$ inches apart—here they can remain until the blooming season. Good drainage is of importance; otherwise, treatment is the same as when raised from bulbs. If sown in April, the plants will bloom in December to January. In order to lengthen the blooming period several sowings 2 to 3 weeks apart can be made. Pkt., 35c.

HELIOPHILA

2819 **Linearifolia.** Charming new annual from the Cape, with pretty blue white-eyed flowers in long racemes. Pretty with Ursinia or other orange flowers. 18 in. Pkt., 35c.

MARIGOLD □

- 3134 **Alldouble Orange African.** Exactly like tall African Orange Queen in size and color and comes 100% double from seed. Pkt., 25c.

ORNITHOGALUM □

Ornithogalum is a bulbous plant belonging to the lily family and came originally from South Africa. Several varieties have been available in bulbs for years, but this is the first time we have been able to offer seeds. The seeds, if planted in a seed bed in rather a cool temperature and transplanted when large enough, about 50% will flower the second year, full flowering takes place the third year. It is wonderful cut-flower material, the outstanding feature is their lasting quality after being cut.

- 3431 **Lacteam (Darling Chinchierchee).** Pure white flowers with dark eyes, and stems 1½ to 2 ft. It is said to be a hardier variety and a very prolific bloomer with smaller flower spikes. Pkt., 25c.

- 3432 **Thrysoides.** Flowers appear in dense raceme of thirty to forty star-like flowers, each one-inch across, clustered in somewhat triangular form. It has a distinctive but not unpleasant odor. Ascending in florescence, the flower spikes persist during a long period. This produces probably the largest flower spike, but is perhaps not so prolific of bloom. Pkt., 25c.

PRIMULA ÷

- 4503 **Obconica Grandiflora Rose Queen.** The largest and most vigorous Primula Obconica in existence. The immense trusses of flowers are freely borne on long stout stems and are of great size and substance. The color is the purest rose. Pkt. (100 seeds), \$1.00.

We recommend this strain as distinct and very desirable. Pkt., 75c.

ers, which are marked with a purple-black zone at the base of the petals. The flowers average four to five inches across, and make a most striking display in the border. This variety is best treated as a half-hardy annual, sowing the seed in March or April, as germination is difficult if started earlier. The plants deserve the most sunny position in the garden. Pkt. 35c.

VERBENA □

5716 **Royal Bouquet Mixed**. 15 to 18 in. tall. A new departure in growth of Verbena Hybrida. Heretofore this family had a roving, creeping habit being used principally as a ground cover. ZINNIA □

6017 **Early Wonder**. The first of a new race of dwarf, early flowering Zinnias. When in full bloom the plants stand between 12 and 15 inches high, producing flowers similar to the Pumila type, borne on medium size, long stems, making it a very fine flower for cutting. The color is a fiery salmon-cerise pink. The stems start from the ground, have no laterals and very few leaves, and when growing in mass could be described as leafless, producing a solid block of flower which is most attractive and desirable for bedding. Pkt., 25c.

6016 **Crown O' Gold**, derives its name and distinction from the fact that each petal of the flower is overlaid with a deep golden-yellow at the base, while carrying out the individual flower color at the tip. The effect is a very pleasing two-tone color harmony, especially lovely and scintillating under artificial light. The color range comprises the more popular shades, including old rose, cream, yellow, carmine and burnished red—the latter a new shade in Zinnias. Pkt., 25c.

TROLLIUS (Globe Flower)

- 8553 **Ledebouri. Golden Queen.** The plant is very vigorous, grows from three to four feet in height, but its chief value lies in the size of the flowers and the intense orange color, the extreme floriferousness and the constancy with which it flowers in autumn as well as early summer. It comes practically true to type from seed. Any slight variation which may appear is only in the number of petals but the fewer petals is amply compensated for by their being of such size and substance as not to be noticeable. Pkt., 50c.

VIOLA

- 8581 **XBosniaca.** Free-blooming, small deep purple flowers. Pkt., 25c.
 8584A **XFlorariense.** This variety forms large compact plants producing a continuous profusion of bloom for a long period, considerably longer than other Violas.  8579A **XJohnny-Jump-Up or Viola Tricolor.** The probable ancestor of the pansy, whose native habitat is the cooler parts of Europe, has long been known to us as the ladies' delight, or none-so-pretty of our grandmothers' gardens and is still a precious possession, even though we have to weed out the plants where they take possession and crowd out more delicate kinds. They make a braver show than their aristocratic relative, the viola, which does not always survive our Winter changes, and if allowed to seed will carpet the rose or iris bed with a sheet of tiny flowers facing the sun in May. They are persistent bloomers and one may even find blossoms on some plant in mid-winter, although the stems are then hardly long enough to pick. Purple, blue and yellow are the three colors that give them their name and the combinations are variable; sometimes there will be a yellow blossom and below it on the same stalk one of yellow and blue. Pkt., 25c.

SCABIOSA Caucasica, House's New Hybrids

Water Lilies

INTEREST in water gardens is growing rapidly, and there are sound reasons for it. As the principal feature of interest in the small garden, a pool answers admirably. It can be made to harmonize with either natural or formal styles, and fits well into most designs. It will furnish a home for gold fish, and other aquatic animal life, while the bog plants and water lilies which can be grown in it have both beauty and strangeness to attract all. Garden makers are learning how easy it is to grow water plants and how richly they reward them. Complete list of water lilies, oxygenating and bog plants with directions for pool making and plant culture are given in our circular which will be mailed on request.

Every Garden Should Grow These

HEALTH, ECONOMY, QUALITY AND INTEREST ARE REAPED FROM HOME VEGETABLE PLOT

Mr. Leonard H. Vaughan, President:

You have asked me to tell you about some of the newer and finer vegetables tested in our trial grounds, which I can especially recommend for the home garden.

First I wish to say that anyone who has the space and does not grow at least some vegetables, is passing up much of the keenest pleasure which gardening can give, and also an opportunity to improve his own health and that of his family, and save money beside.

Vegetables belong in the garden picture. They are part of the flavor of country or suburban living. All large estates have vegetable gardens; their owners would not be without the superlative food which they yield. Vegetable gardens can be made beautiful; they never lack interest. Nowadays they need not involve labor, as paper mulch does away with the need of cultivation.

Of course, most of us can run to the store and carry home all we need in vegetables for two or three meals, but there is something lacking in them besides that withered look your eye catches. Something that the dietitian has had to discover for us, little things called vitamins that are so essential in the upbuilding and maintaining of our body machinery. Vitamins can be had at their best only in vegetables served with the shortest possible delay.

And there is a flavor and tenderness in home-grown things not to be had in store vegetables. Just try two ears of sweet corn, the one fresh from the stalk, the other fresh from the grocer (having been off the stalk at least 24 hours) boil them in the same kettle, serve on the same dish and you will not have to be told which came from your garden. The difference in flavor is vast.

Asparagus Chicory—This is a favorite in Italy and has been grown successfully in our trials. A member of the chicory family, it is cultivated for its fresh green shoots which are boiled in salt water and served hot, or in cold salad. They are tender and suggest the flavor of asparagus. New sprouts continually spring from the base, to be harvested and enjoyed. Pkt., 25c; $\frac{1}{2}$ oz., 50c; oz., 75c.

BROCCOLI, ITALIAN GREEN
SPROUTING

Bean, Monster Stringless Green Pod—This is a giant green bean. The pods are round, very long, and stringless. The vines are tall, strong-growing, and prolific. Seeds are large and black. An outstanding variety. Pkt., 15c; $\frac{1}{2}$ lb. 35c; lb., 60c; 2 lbs., \$1.00.

Bean, Vaughan's Monster Stringless Wax—This variety has no superior as to quality and flavor. It is so stringless and tender (without any linen in the pod) that it can be used on the table up to the time the bean is almost ripe. It is a light yellow; and in size it is the largest of all Bush Beans; about half an inch thick and 5 to 8 inches in length. It is early and matures its beans evenly and well together. Pkt., 15c; $\frac{1}{2}$ lb., 35c; lb., 60c. 2 lbs., \$1.00.

Bean, New Stringless White Wax—This is a perfectly stringless variety with a long, straight pod, and a white seed which may be eaten dry if desired. It is early, of excellent flavor, produces heavily and is strongly recommended for home gardens. Pkt., 15c; $\frac{1}{2}$ lb., 35c; lb., 60c; 2 lbs., \$1.00.

Broccoli, Italian Green Sprouting—A plant of the cauliflower family which, after the first head has been harvested produces branching sprouts on which are small loose heads, two inches in diameter, which are cooked like cauliflower. The flavor is delicate and delicious. Pkt., 25c; $\frac{1}{2}$ oz., 75c; oz., \$1.25; $\frac{1}{4}$ lb., \$4.00.

Cabbages, Yellows Disease Resistant—We list on page 17, proved varieties of disease resistant cabbages, which have become so important to sections in which the cabbage yellows disease is prevalent. No claim is made of freedom or immunity from other diseases, such as clubfoot, stem rot or black rot. We offer only varieties which have been tested in the diseased cabbage fields of Wisconsin and found to be 80% to 90% resistant.

Well, assuming you would like a garden this year, how are you going to know what to plant so as to get the most and best out of it? Some of those beans the grocer has are tough and have strings that get in your teeth. Those peas he sold you had wonderfully large pods, but there were few peas in comparison. The radishes were beautiful but so hollow and pithy they were only good in looks. Those vegetables were grown by market gardeners who reasoned like this: The beans must be tough to stand shipping or trucking and be in containers 24 hours and yet be presentable to the eye. The peas must have large pods so they will fill the basket and not take too long to pick. The radishes must be large enough to look good and must grow quickly so he can raise two or more crops off the same ground.

So the market grower must select varieties which stand the shipping test, and pass over the kinds which excel in the table test. In most cases, those which are tenderest and have the finest flavor, lack the qualities which are essential in market varieties.

Home gardeners can and should grow vegetables which excel in table quality. They will get lots more pleasure out of their gardens if they also grow some varieties which are new, and not generally known. All through this catalogue home garden varieties are indicated and recommended; and on this and the following page I am listing some of these which are new, not generally known or have some special excellence, as proved in our trial grounds. As you know, we never recommend to our customers any variety of vegetable which we have not grown one or more years, and tested exhaustively so we know what it will do.

SCOTT REDFERN,

Manager, Vegetable Seed Dept.

Carrot, Red Core Chantenay—The shape is the same as regular Chantenay. The core is more red, giving it the appearance of being coreless. This carrot is more tender and better flavored than the standard Chantenay, but it is also influenced to a great degree by weather and soil conditions. In an unusual season the core may be so nearly like regular Chantenay that it is difficult to tell them apart. It is however, a desirable improvement over the regular Chantenay. Pkt., 10c; oz., 25c; $\frac{1}{4}$ lb., 75c; lb., \$2.50.

Carrot, Vaughan's Chicago Forcing—A nearly cylindrical, blunt pointed coreless carrot, from 1 to 1 $\frac{1}{2}$ inches in diameter, carrying its size nearly to the point. The best flavored and most tender variety, being far superior to any other for the home gardener. Pkt., 15c; oz., 25c; $\frac{1}{4}$ lb., 75c; lb., \$2.50.

Celery Cabbage or Chinese Pe Tsai—The VAUGHAN Strain. This exceptionally fine vegetable is rapidly growing in public favor. Its growth resembles the Cos lettuce, but the outer leaves have the general texture of ordinary cabbage. When the outside leaves are stripped away the cabbage presents a well nigh irresistible appearance. Our strain of this seed is grown in China by a specialist whose family has raised and selected this particular type for many years. The heads blanch without tying. July is the proper planting time. Pkt., 10c; oz., 60c; $\frac{1}{4}$ lb., \$2.00.

Celery, Golden Phenomenal—

A new celery having the growing characteristics of Golden Plume. Taller, growing longer to the first leaf and heavier stalk. Free from any strings, fine flavor and excellent quality. Pkt., 25c; $\frac{1}{2}$ oz., \$1.75; oz., \$3.00.

Cucumber, "The Vaughan"—

This is as much in advance over the Davis Perfect variety as the "Davis" was over the old extra Long White Spine sorts. Compared to the other (Long White Spine varieties) it is much darker in color, more uniform in shape and size, thinner, and more prolific. It is the ideal American forcing variety, as well as an outdoor sort. Our customers who grow it have greenhouse cucumbers raised outdoors. J. C. Robinson of Waterloo, Nebraska, writes: "We have tried the Vaughan Cucumber out for two years in our trials. It certainly will displace most other kinds, in our opinion." Pkt., 15c; oz., 40c; $\frac{1}{4}$ lb., \$1.25; lb., \$4.50.

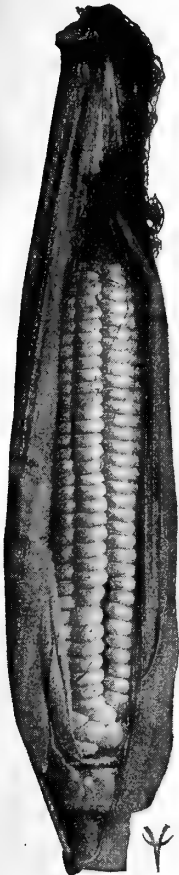

Marrow, New Italian—When matured it is 2

feet long, 3 to 4 inches in diameter and very dark green. A bush type and very productive. There is nothing better for slicing in its early growth and if kept picked, will continue to bear until frost. A variety once tried will become a favorite in the home garden. Pkt., 10c; oz., 35c; $\frac{1}{4}$ lb., \$1.00.

CARROT, RED CORE
CHANTENAY

Newer and Improved Vegetables

VAUGHAN'S
EARLIEST
SWEET CORN

better quality. 12 inches long, 6 inches in diameter, tapering at either end. Gray green color. Pkt., 15c; oz., 25c; ¼ lb., 75c; lb., \$2.50.

Melon, Honey Rock (or Sugar Rock)—A wonderfully sweet melon with thick orange flesh and a distinctive flavor, suggesting the Honey Dew taste. It produces heavily and matures in 85 days. Oval fruits of medium size, not ribbed. An excellent home garden variety. Pkt., 10c; oz., 35c; ¼ lb., \$1.00; lb., \$3.00.

Pepper, California Wonder—A mild, sweet, midseason variety, very large, measuring 4½ inches in length by 4 inches in diameter. It resembles Chinese Giant in form, but has an extremely thick flesh which that variety does not; crimson fruit. Pkt., 20c; ½ oz., 60c; oz., \$1.10; ¼ lb., \$3.75.

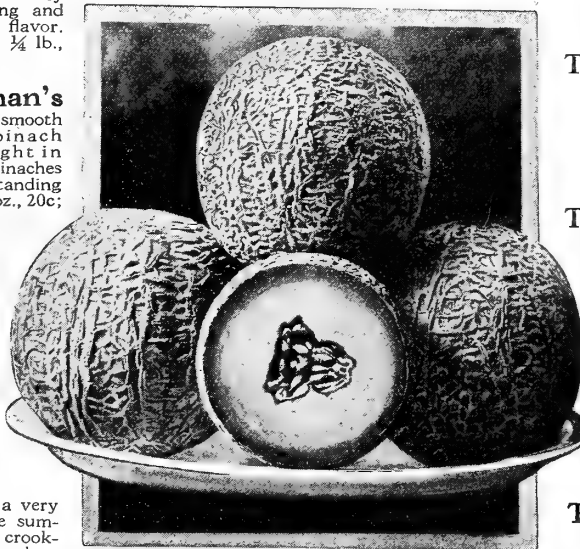

Radish, Giant Butter—This is by far the largest of the early turnip radishes exceeding in size even the Crimson Giant. By careful selection, Giant Butter has been bred true to type so that there is almost no deviation from its fine, round shape. In color it is vivid scarlet. It is further characterized by ability to stand for an unusually long period without becoming pithy and is highly recommended for home gardens. Can be planted successfully throughout the summer. Pkt., 10c; oz., 20c; ¼ lb., 45c; lb., \$1.40.

New Spinach—Florida Broad Leaved Mustard—One of the best mustard greens, having medium smooth leaves about 10 inches long by 6 inches wide and of upright growth. Easily prepared for cooking and has mild mustard flavor. Pkt., 15c; oz., 20c; ¼ lb., 50c; lb., \$1.25.

Spinach, Vaughan's Special—An early, smooth leaved spinach being more upright in growth than other spinaches and nearly a long standing variety. Pkt., 10c; oz., 20c; ¼ lb., 40c; lb., \$1.00.

Squash, Banana

One of the finest fall and winter squash. Of sweet potato quality, free from stringiness. No hard as Hubbard to prepare but as good or

MELON, HONEY ROCK (OR SUGAR ROCK)

Squash, Straight Neck—This is a very desirable summer squash to take the place of the regular crookneck type. It will pack much easier, will produce fully as heavily, is of the same general appearance as the Crookneck Yellow Summer, but has a heavier neck and gives more edible squash. It is altogether more desirable than the Crookneck for either home garden or market garden. Pkt., 10c; oz., 30c; ¼ lb., 80c; lb., \$2.50.

Sweet Potato Squash—A valuable addition to the list of small squashes which are becoming so popular a feature of fall and winter menus. It is an improved Delicata, as sweet as Table Queen and of exceptionally fine flavor. The fruits average 6 to 8 in. long and they are thick fleshed. When baked and served with melted butter it is a table delicacy of the first order. Pkt., 15c; oz., 35c; ¼ lb., 75c; lb., \$2.50.

SQUASH, STRAIGHT NECK

Sweet Corn, Vaughan's Earliest—The earliest medium sized ear of white sweet corn on the market. There are others a few days earlier or as early, but they have not the size nor quality. The ear is sufficiently high on the stalk to make picking easy, and is of sufficient size so that 5 dozen will make a bag for the market. Recommended for both the home gardener and for the early market gardener. Pkt., 10c; ½ lb., 30c; lb., 50c; 2 lbs., 90c.

Sweet Corn, Golden Gem—This is an entirely new variety developed by the North Dakota Agricultural College, and is the earliest yellow sweet corn on the market. As compared with Sunshine or 60-Day Yellow it is a week to ten days earlier, producing practically the same size ear but of an eight and ten-row type. Its productive and early qualities make it an outstanding variety of the yellow sweet corn class. Is an excellent addition to the garden. Pkt., 25c; ½ lb., 50c; lb., 90c; 2 lbs., \$1.65.

Tendergreen—A new variety of greens, producing only a small root, but large dark green leaves having a small rib. It matures from seed in 25 days, and has a pleasant and distinctive flavor. It is not a "cut and come again" crop, but the leaves are twice the size of Swiss chard. An excellent addition to the list of greens. Pkt., 10c; oz., 15c; ½ lb., 70c; lb., \$1.25; 5 lbs., \$5.00.

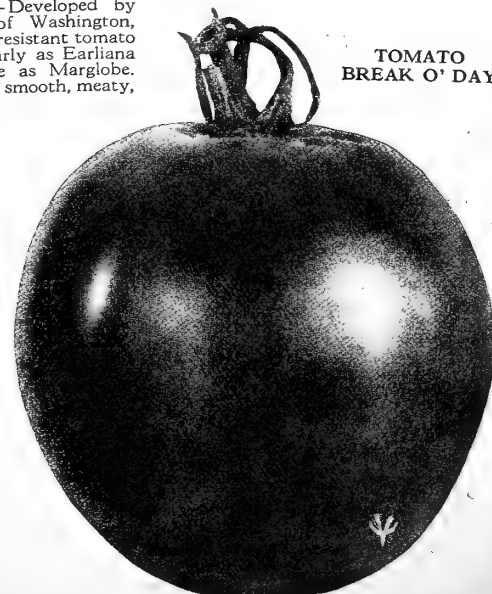

Tomato, New King—This striking variety was originated in the Chicago district and is the largest tomato that we know of. It is about the season of Ponderosa, but grows to nearly twice the size. Ripens uniformly from core to outer skin. These features make it an excellent addition to the home garden. Pkt., 25c.

Tomato, Vaughan's American Beauty—An exceptionally fine tomato bred by Mr. W. E. Vail of Yorktown Heights, N. Y. This is globe shaped, purple color and an excellent producer. Good for the home or market. Pkt., 25c; ½ oz., 60c; oz., \$1.00.

Tomatoes, Wilt Resistant—In sections where fungus and bacterial diseases are prevalent in this crop, resistant varieties should be chosen to insure a normal yield.

BREAK O' DAY—Developed by F. J. Pritchard, of Washington, D. C. A new wilt resistant tomato that is nearly as early as Earliana and as productive as Marglobe. Its fruits are large, smooth, meaty, red and globular, very similar to Marglobe but usually larger. Pkt., 50c; ½ oz., \$1.25; oz., \$2.00; ¼ lb., \$7.50.

MARGLOBE—A second-early, red-fruited variety equally suitable for trucking or canning. As early as Bonny Best, produces large, smooth, meaty, globular, red fruits which ripen uniformly and are relatively free from cracks. They make a splendid canned product and first-class pulp. Pkt., 10c; ½ oz., 35c; oz., 60c; ¼ lb., \$2.00.

AUTHORITATIVE investigators are agreed that the greatest handicap to good lawns in the United States is cheap seed adulterated with timothy. Enormous quantities of so-called lawn seed are sold which contain little or no seeds of permanent lawn grasses, but are chiefly composed of timothy, a coarse hay, which comes up quickly but inevitably ruins a lawn. Vaughan's Lawn Seed formulas CONTAIN NO TIMOTHY.

There is no excuse in these days for guess work about seed. Laboratory tests show its purity and its germination. We do not buy, nor do we sell, seed which fails to meet our high standards, by test in our own seed laboratory.

Vaughan's "Parks" lawn seed has been sold by us for 54 years. In the beginning it was prepared according to a careful formula, for use in the Chicago parks, which were even then famous. The value of this formula has been proved by recent Department of Agriculture experiments confirming our experience.

HOW TO MAKE A LAWN

Your lawn either makes or mars your home and if you would be successful you must closely follow simple rules which if ignored mean failure. The essentials to a perfect lawn are: good seed, correct soil conditions and proper subsequent care. These points are carefully explained in our pamphlet "How To Make a Lawn," written for your guidance and which may be had free upon request. A copy of this pamphlet is contained in every carton of Vaughan's Lawn Seed.

We cannot urge too strongly that you follow these directions as soil conditions, fertilizer and correct seeding methods are as necessary to success as is the fine quality of Vaughan's Lawn Grass blends.

Quantity to Use—On new lawns, use 1 lb. for every 300 square feet; 5 lbs. for 1500 square feet; 135 to 145 lbs. for one acre. To replenish lawns where turf is thin use half quantity.

Vaughan's "Parks" Lawn Seed The Standard Lawn Formula

Price, 1/2 lb., 30c; 1 lb., 60c; 2 lbs., \$1.20; 3 lbs., \$1.75; 5 lbs., \$2.90; 10 lbs., \$5.75; 15 lbs., \$8.50; 20 lbs., \$11.25; 25 lbs., \$14.00; 50 lbs., \$27.00; 100 lbs., \$50.00.

ASPARAGUS from the home garden is one of the most delicious and earliest of crops. It may be grown in any deep, rich soil, either from seed or roots.

SEED PLANTING—Asparagus may be raised from seed and a crop obtained in three years. In early Spring sow the seed, after soaking it twenty-four hours in warm water, in drills about one foot apart and one inch deep. The following Spring, select the best of the roots and place in the permanent bed.

ROOT PLANTING—A year may be saved by buying the plants (one year old are greatly to be preferred) and setting them at least two feet apart in the row, and the rows not closer than four feet; see that the roots are well and evenly spread out in planting and that they are not exposed to the air longer than is absolutely necessary, as they deteriorate rapidly.

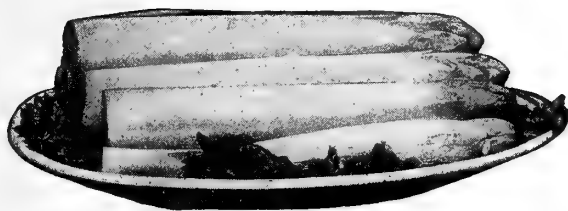

WHITE ASPARAGUS. White Asparagus may be grown from the same variety as green. It is merely a method of growing. The roots are set deeper and the stalks are cut underneath the ground before exposure to the light has turned them green.

Washington Rust Resistant Strain. Developed by the experts of the United States Department of Agriculture. We offer seeds or plants grown on our Michigan farms from seed sent us by the United States Department of Agriculture. Rustproof plants are being generally accepted by commercial growers, since the differences between varieties of asparagus are not great, given the same soil and cultivation. Assurance of freedom from disease is of such importance as to predominate in the selection of planting stock. The most satisfactory strain for amateurs and with most commercial growers is **MARY WASHINGTON**.

MARY WASHINGTON stock is so far the most satisfactory of the two strains. It is the result of a single cross. Pkt., 10c; oz., 25c; ¼ lb., 75c; lb., \$2.75.

WASHINGTON stock is the result of crosses from a single male plant "Washington" with selected female plants. Pkt., 10c; oz., 25c; ¼ lb., 75c; lb., \$2.00.

BONVALLET'S GIANT

Bonvallet's Giant. Equally good, grown white or green. Bonvallet's Giant is favored on account of its extreme vigor and rust resistance. Usually it produces a crop a year in advance of other sorts. Our strain has been improved each year by careful re-selection. Pkt., 10c; oz., 15c; ¼ lb., 40c; lb., \$1.25.

Early Giant Argenteuil. Famous Parisian Asparagus. Grows to large size, vigorous and fairly free from rust, superb flavor. Our seed is from one of the largest plantations near Paris. Pkt., 10c; oz., 15c; ¼ lb., 35c; lb., \$1.00.

PALMETTO. Standard light green. Pkt., 10c; oz., 15c; ¼ lb., 35c; lb., \$1.00.

CONOVER'S COLOSSAL. A large, fast-growing variety. Pkt., 10c; oz., 15c; ¼ lb., 35c; lb., \$1.00.

Artichoke

The Artichoke is grown for its edible blossoms. It is a perennial but requires renewing every two or three years. The Jerusalem Artichoke, so called, belongs to a different family.

GREEN GLOBE. Perennial, large-flowering heads of exquisite and unique flavor. A prized delicacy of rapidly growing popularity. Matures second year; not hardy in the North. Pkt., 10c; oz. 75c.

JERUSALEM ARTICHOKE ROOTS. Best hog food known. Easily grown. Three bushels plant an acre, enough to keep 20 to 30 hogs from Oct. to April. Cut and plant like potatoes. In Europe the tubers are baked, like potatoes, and esteemed as food because of their distinctive flavor. It grows in a wild form in the United States. Lb., 25c; 3 lbs., 65c; 10 lbs., \$1.50. Lima Beans—A Table Delicacy

New Wonder Bush Lima. The recognized standard of bush lima bean quality, so considered by critical experts of highest authority. For general purposes Vaughan's Strain of this splendid sort has now come to be used in all gardens where Bush Limas are planted. Plants are large, prolific, compact and long bearing, maturing in mid-season; the pods are very uniform, slightly curved and usually contain three seeds. Pkt., 10c; ½ lb., 30c; lb., 50c; 2 lbs., 90c; 10 lbs., \$3.25.

Fordhook Bush Lima Bean. The highest quality Bush Lima Bean, it is the old "Potato" or "Kummerle" improved. This new sort grows very erect, does not come in contact with the ground as did the older sort, named above; pods are twice the size of the "Kummerle" and contain 4 to 5 large, thick, beautiful green beans. In contrast with the old sort, which was dry and mealy, this new Fordhook is tender, sweet and juicy; a richly palatable bush lima bean. Pkt., 10c; ½ lb., 35c; lb., 60c; 2 lbs., \$1.00; 10 lbs., \$4.50.

Improved Bush Lima—Burpee's. This improved Burpee's has larger pods and beans than the original. The vines are heavier and produce larger pods than "New Wonder"—and they mature a week earlier. Vaughan's strain of this excellent sort gives the greatest satisfaction to patrons. Pkt., 10c; lb., 50c; 2 lbs., 90c; 10 lbs., \$3.50.

BUSH LIMA—HENDERSON'S. Crop reliable; very productive, compact form, free from mildew. One of the first Lima beans to mature. Pkt., 10c; lb., 40c; 2 lbs., 75c; 10 lbs., \$3.00.

1 and 2-lb. lots of Beans are pre-paid; 10-lb. lots by express or freight at buyer's expense.

NEW WONDER BUSH LIMA

BUSH LIMA—BURPEE'S. Bush 15 to 20 inches high, 24 to 30 inches diameter, large white seeds; thick stems furnish fine support; very productive and splendid quality. Pkt., 10c; lb., 45c; 2 lbs., 80c; 10 lbs., \$3.25.

FORD'S MAMMOTH. Pods grow in large clusters and contain from 5 to 7 good beans; edible, green or dry. Pkt., 10c; lb., 40c; 2 lbs., 75c; 10 lbs., \$3.00.

LIMAS should be planted a little later than the other running beans, in the most favorable location possible, as they are very late in maturing. Always plant with the eye down. They may be sown in hills, or in rows, and allowed to run on chicken wire or strings and thinned to eight or ten inches apart. The Bush Lima is more easily grown than the tall, and is earlier and more economical of space. Many, however, consider the Tall Lima the best flavored of all beans.

Carpinteria Pole Lima. While the seed retains its distinctively green color, it is as prolific as any white lima; the vines are vigorous, bearing quantities of pods, each containing usually four beans. Pkt., 10c; ½ lb., 25c; lb., 45c; 2 lbs., 80c; 10 lbs., \$3.25.

Early Leviathan. Exceptionally early, it equals the main crop varieties for large pods; clusters of 5 to 8 grow together. Pkt., 10c; ½ lb., 30c; lb., 45c; 2 lbs., 85c; 10 lbs., \$3.50.

Siebert's Early Lima. Hardy, early and an enormous producer, a grand variety for Northern climates. Pods are dark green, medium long, well filled with 3 or 4 large beans. Pkt., 10c; lb., 40c; 2 lbs., 75c; 10 lbs., \$3.00.

LARGE GREEN SEEDED POLE LIMA. It produces beans equal to any of the so-called "giants," and whose greenish tinge adds much to their appearance over the pure white color of the other sorts. Season medium, pods 9 to 10 inches in length, containing an average of 5 to 6 beans. Pkt., 10c; ½ lb., 25c; lb., 45c; 10 lbs., \$3.25.

EXTRA EARLY JERSEY LIMA. Pkt., 10c; lb., 45c; 2 lbs., 80c; 10 lbs., \$3.25.

KING OF THE GARDEN. A climber that blooms and produces to end of season. Uniform pods 5 to 8 inches long, filled with beautiful beans of superior quality. Pkt., 10c; lb., 45c; 2 lbs., 80c; 10 lbs., \$3.25.

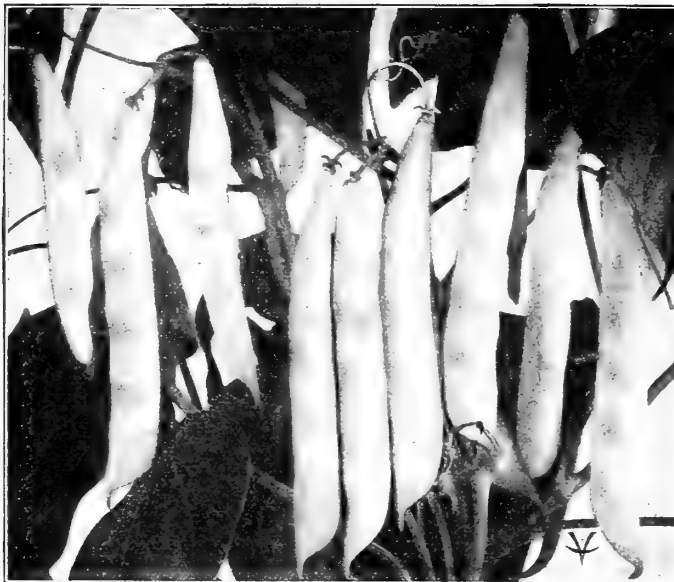

LARGE WHITE SEEDED. Very attractive. Pkt., 10c; lb., 45c; 2 lbs., 85c; 10 lbs., \$3.50.

CHALLENGER OR DREER'S IMPROVED. Thick pods, good size and flavor. Pkt., 10c; lb., 45c; 2 lbs., 85c; 10 lbs., \$3.50.

IDEAL POLE LIMA. Excepting only "Carpinteria," this is best for market in Central States and where main crop can mature. Pods are large, some 8 inches long. Pkt., 10c; lb., 45c; 2 lbs., 85c; 10 lbs., \$3.50.

CARPINTERIA—GREEN SEED LIMA

IMPROVED GOLDEN WAX

Wax Podded Bush Beans

BEANS are very tender. The seeds must be sown where they are to grow, when frost has ended and the ground is warm. The bush varieties are much earlier than the pole beans and are usually the main crop in Northern gardens, and in home gardens where space is limited. Sow in rows about fifteen inches apart, and thin the plants to about four inches apart in the row. Keep the surface soil soft and the rows free from weeds. Do not cultivate when the plants are in bloom, as it prevents the flowers from setting pods, and cultivating when the vines are wet with dew spreads the anthracnose, the chief disease of beans.

For the Home Garden.—We recommend Wardwell's Kidney Wax, New Stringless and Round Pod Kidney Wax. The home gardener will find his bean crop one of the most productive in food values. If the plants are kept picked clean they will bear a long time and a second crop will come in late summer continuing through the fall. If space is limited, however, it is better to plant for a succession crop, as the first crop is much the heaviest.

Wardwell's Kidney Wax. In Western prairie soil this sort is at its best, and gives most gratifying results. The pods are 7 inches long, flat, brittle, stringless, straight, finely shaped, beautiful yellow, distinct and attractive.

Pkt., 10c; $\frac{1}{2}$ lb., 30c; lb., 50c; 2 lbs., 90c; 10 lbs., \$3.50.

Pencil Pod Black Wax. Bushy vines, very prolific, 15 inches high, bear round, thick, stringless, rich yellow pods, 6 to 7 inches long, of excellent quality, containing black seed. Pkt., 10c; $\frac{1}{2}$ lb., 30c; lb., 45c; 2 lbs., 80c; 10 lbs., \$3.00.

Round Pod Kidney Wax. Is early, of vigorous growth with heavy yielding vines; pods are long, round and entirely stringless; have fine flavor.

Pkt., 10c; $\frac{1}{2}$ lb., 30c; lb., 50c; 2 lbs., 90c; 10 lbs., \$3.50.

Monster Stringless Wax. See Novelty Page. Pkt., 15c; $\frac{1}{2}$ lb., 35c; lb., 60c; 2 lbs., \$1.00.

Stringless White Wax (New). See Novelty Page. Earlier than entirely stringless, perfectly straight and excellent quality. The bean itself is a clear white about the size of Davis and can be used in a dry stage if necessary. This is very productive and fine quality. Pkt., 10c; $\frac{1}{2}$ lb., 30c; lb., 50c; 2 lbs., 90c.

Davis Kidney Wax. Vines vigorous and very prolific, bear handsome, waxy white pods 7 inches long, the finest appearing of all early wax beans. They should be used while young, when free from strings. Pkt., 10c; lb., 50c; 2 lbs., 90c; 10 lbs., \$3.50.

DAVIS KIDNEY
WAX

CURRIE'S GOLDEN WAX.

Early, hardy, nearly rust-proof. Long, golden yellow pods, crisp and tender. The seed is black. The much-planted sort. Pkt., 10c; lb., 50c; 2 lbs., 90c; 10 lbs., \$3.50.

Green Pod Bush Type

WHETHER one grows Wax or Green Beans is a matter of taste. Tests have proved, as far as can be, that there is no difference in flavor, nor in tenderness; and they are both grown alike. The round-podded varieties are considered to be more brittle, while the flat-podded types are better yielders. Bountiful is a flat-podded variety of remarkable yielding qualities, while Stringless Green Pod and Giant Stringless Green Pod are examples of the round-podded type.

For the Home Garden—Bountiful, Stringless Green Pod, Full Measure and Stringless Refugee, for all of which we can supply seed grown on our own farms in Michigan.

Stringless Green Pod. The great leader in green pods for general purposes. It is early, and very prolific, the vines bearing long, round, straight, thick, meaty pods, free from strings or fiber; rich deep green color, very attractive and of excellent quality. For succession, plant every two weeks.

Pkt., 10c; ½ lb., 30c; 1 lb., 50c; 2 lbs., 90c; 10 lbs., \$3.50.

Bountiful Stringless. This bean has a long flat pod instead of a round pod like the Stringless Green Pod variety. Bountiful, has wonderful quality; absolutely stringless, early and prolific.

Pkt., 10c; ½ lb., 30c; 1 lb., 50c; 2 lbs., 90c; 10 lbs., \$3.50.

Giant Stringless Green Pod. An immense type of "Improved Early Valentine" and nearly as early. The pods have all the excellent qualities of the original with much greater size, which greatly improves the appearance. A splendid succession sort to Stringless Green Pod.

Pkt., 10c; ½ lb., 30c; 1 lb., 50c; 2 lbs., 90c; 10 lbs., \$3.50.

Tennessee Green Pod. This is a second early green pod bean of merit, because of its excellent flavor and quality. The flat pods are extra long and irregular in shape; bright green in color.

Pkt., 10c; 1 lb., 45c; 2 lbs., 80c; 10 lbs., \$3.00.

Improved Early Red Valentine. Is very hardy and early, germinates in cold ground where other sorts would not. Vines are about 15 inches high, yield well; pods are round and fleshy and eaten when young are of good quality.

Pkt., 10c; 1 lb., 45c; 2 lbs., 80c; 10 lbs., \$3.00.

Black Valentine. It is not as early as "Improved Red Valentine," the original strain from which this was developed and improved, but it is suited to both early and late planting; its hardness overcomes light frost. The pods are a third longer than Red Valentine, and grow in clusters perfectly straight and round.

Pkt., 10c; 1 lb., 45c; 2 lbs., 80c; 10 lbs., \$3.00.

REFUGEE OR 1000 TO 1. A producer of remarkably large crops. Compared with Valentine it is similar in general qualities, with pods a third longer and tapering to a point; they are perfectly round. Pkt., 10c; 1 lb., 45c; 2 lbs., 80c; 10 lbs., \$3.00.

BEETS should be sown in drills in the garden as soon as the ground can be worked. Each "seed" is really a hard-shelled fruit cluster containing two or three small seeds. A moist seed bed is needed and the ground should be firmed well over the seed. Thinning out will be necessary, and the young beets and tops cooked together make one of the best dishes of the season. Thin to 5 inches apart for best results. The turnip varieties are earliest and most popular. The long or blood beets sown in May are harvested in the autumn for winter use. Early varieties sown in midsummer may be harvested in autumn and stored for winter. The home garden is not likely to be attacked by either insects or diseases which will injure beets. Swiss chard is a variety of beet grown for its leaves. See Page 36.

Home Garden Varieties—Crosby's Egyptian or Fireball for the early crop and Detroit Dark Red Turnip for main crop and late crop are recommended to home gardeners as providing the very finest table quality. Swiss Chard should be in every home garden.

Crosby's Egyptian. This is a beet famous both for shape, color and quality. Vaughan's strain, always selected to maintain and improve shape and uniformity, flavor and other excellent qualities, has secured for this variety a wide and growing popularity, based solely on merit. Vaughan's Crosby Beet is very early; has deep red color; is smooth and tender, has sweet flesh that is richly palatable.

VAUGHAN'S SELECTED STOCK—Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 50c; lb., \$1.50; by express, 5 lbs., \$6.50.

STANDARD STOCK—Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 45c; lb., \$1.25; by express, 5 lbs., \$5.50.

Early Wonder. Different seedmen have so many varying ideas of what constitutes a Crosby Egyptian beet that we are listing this particular type now under the name "Early Wonder." The roots run a little deeper (more of a globe shape) than other types, and are deep blood-red in color, with almost no lighter zoning in the cross section of a root. Top small, but large enough for bunching, small tap root. Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 50c; lb., \$1.50; by express, 5 lbs., \$6.50.

Detroit Dark Red Turnip. A main crop variety unequaled as a big cropper. Perfect turnip-shape, small tap root, small upright tops—fine for market bunching. Skin and flesh dark, blood-red, sweet, tender and delicious.

VAUGHAN'S SELECTED STOCK—Pkt. 10c; oz., 20c; $\frac{1}{4}$ lb., 50c; lb., \$1.50; by express, not prepaid, 5 lbs., \$6.50.

Flesh is rich blood-red, sweet, tender and never stringy. Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 45c; lb., \$1.25; 5 lbs., \$5.50.

Vaughan's Fire Ball. It has no superior in quality, in some respects no equal; it is a "fancy trade" builder. It is early, maturing with "Crosby's Egyptian," has fine globe shape, deep red color and the flesh is solid and very sweet. The tops are small and do not hasten rapid bunching, but small tops permit closer planting than sorts with larger tops. Vaughan's "Fire Ball" is very handsome and highly satisfactory for home use. Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 50c; lb., \$1.50.

Edmand's Blood Turnip. One of the best, round, well formed, blood-red, very sweet and tender. They do not grow large and coarse, and, having small tops, they can be planted closely. Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 45c; lb., \$1.25; by express, 5 lbs., \$6.00.

CARROTS are not alone one of the most wholesome of foods, supplying precious vitamins, but when half-grown are one of the greatest delicacies possible to place on the table. Persons who say they do not like carrots usually will be found never to have tried them young. The seeds are very slow to germinate and they should be marked in the row with radishes or some other quickly-maturing crop which will be harvested before the carrots crowd. Mellow soil which will not bake over the seeds and will not harden in midsummer is the kind carrots like. Plant in rows 18 to 24 inches apart and thin 3 to 4 inches apart.

Vaughan's Select Danvers. This is a very popular and universally planted carrot. It is two weeks later than Chantenay and the diameter of the root is slightly smaller. It is a half-long type, averaging five and one-half inches in length tapering to a blunt point. The color is a rich, deep orange, the table quality excellent, its yield greater per acre than any other.

DANVERS SELECT STOCK—Pkt., 10c; oz., 20c; ¼ lb., 60c; lb., \$1.75; 5 lbs., \$7.75.

HALF LONG DANVERS. Standard Stock. More pointed and slightly smaller than Select. Pkt., 5c; oz., 15c; ¼ lb., 45c; lb., \$1.40; 5 lbs., \$6.25.

Guerande or Oxheart. Is a variety of very rapid growth, each attains a weight of more than one pound. It is thick, 5 inches long, has fine flavor and tenderness. A second early. Pkt., 10c; oz., 15c; ¼ lb., 45c; lb., \$1.40.

Vaughan's Chicago Forcing. See Novelty Page. A FORCING Half Long; develops much earlier. Nearly cylindrical with blunt point coreless. Excellent for the home garden. Pkt., 15c; oz., 25c; ¼ lb., 75c; lb., \$2.50.

Red Core Chantenay. See Novelty Page. Pkt., 10c; oz., 25c; ¼ lb., 75c; lb., \$2.50.

CARROTS FOR STOCK

Mastodon or White Intermediate. Heaviest cropping Carrot. Roots short, white, very heavy at shoulder, easy to harvest without breaking. One of the most profitable sorts. Oz., 15c; ¼ lb., 40c; lb., \$1.00; 5 lbs., \$4.50.

Long White Belgian. Similar to Long Orange except in color. Oz., 15c; ¼ lb., 40c; lb., \$1.00; 5 lbs., \$4.50.

Early Chantenay. This excellent variety is earlier than Danvers, being ready to use in sixty days after sowing. It is slightly shorter and more stump-rooted, averaging 4½ inches in length, tapering slightly from well-set shoulders. It is smooth, of a deep orange color, and of high table quality. Home gardeners may grow this for all purposes, allowing the roots to reach full growth for winter storage.

Pkt., 10c; oz., 20c; ¼ lb., 50c; lb., \$1.40.

SELECTED STOCK—Pkt., 10c; oz., 25c; ¼ lb., 60c; lb., \$1.75.

The leaves are fine and the roots almost cylindrical, very smooth and grow about six inches long; the flesh is entirely red and very sweet and almost entirely without a core. Early Short Scarlet. (Dutch Horn.) Larger than French Horn and almost as early, stump-rooted, 1½ inches thick, three inches long; fine grain, sweet-flavored, rich orange. Pkt., 10c; oz., 20c; ¼ lb., 60c; lb., \$1.75.

Very Early Scarlet Forcing. (French Horn.) Best variety for earliest forcing. Reddish orange-colored roots, nearly round. When matured they are about two inches in diameter. Pkt., 10c; oz., 20c; ¼ lb., 60c; lb., \$1.75.

COPENHAGEN
MARKET CABBAGE

Re-selected Copenhagen Market Extra Early. As the earliest of the larger heading cabbages Copenhagen Market is of the utmost importance to both home and market growers. Our re-selected early strain has been sold by us for seven years with remarkable results. Truck gardeners have reported that their entire crop from this seed has been marketed before Copenhagen heads from other seed were ready to cut. The product is uniformly early with few outside leaves. This strain is the result of years of work by a European breeder who we believe first bred and produced the Copenhagen Market.

RE-SELECTED TESTED STOCK. Pkt., 15c; ½ oz., 50c; oz., 80c; ¼ lb., \$2.50.

STANDARD STOCK. Pkt., 10c; ½ oz., 35c; oz., 60c; ¼ lb., \$1.75; lb., \$6.00.

THE earliest cabbages may be enjoyed in June from seeds sown in the house or in a hot-bed. Early Jersey Wakefield matures in 90 days, and later varieties in 100 to 115 days. Both early and late varieties should be started indoors, and for fall and winter cabbages the late varieties should be started in a seed bed in May. Savoy cabbages excel in table quality and are recommended for the home garden. Plenty of room should be given plants, at least two feet each way. They need a light and well watered soil, rich in nitrogen. Frequent applications of nitrate of soda or some other nitrogenous fertilizer will work wonders. Cabbage worms may be kept off by dusting with Slug Shot or spraying with Pyrox or arsenate of lead.

Vaughan's Select Early Jersey Wakefield.

This extra early conical-shaped head cabbage is the best early for planting in the United States. Earliness and hard heading in this variety are most important to growers. Early Jersey Wakefield Cabbage is a specialty with us, and to secure the best seed on our growing farms we spare no expense. More seed of this sort is planted in the United States than of all other varieties of the same type together. The heads are hard, the outside leaves small, so that close planting is possible. Pkt., 10c; oz., 35c; ¼ lb., \$1.00; lb., \$3.50.

WAKEFIELD

RED CABBAGE

Haco, Earliest Round Red (New). This new sort originated in Denmark, and the seed we offer was grown especially for us by the originator. The color is intense dark red throughout, heads trimmed average 3 lbs. each. Pkt., 15c; ½ oz., 35c; oz., 60c; ¼ lb., \$1.75.

Mammoth Rock Red. The hardiest and largest heading red cabbage. Produces heads in about 120 days, round, very solid and of a deep red color, often weighing up to 12 pounds each. This variety is much used for cole slaw and pickling. Pkt., 10c; oz., 40c; ¼ lb., \$1.25.

VAUGHAN'S BLACK DIAMOND. A new second season black-red variety. Pkt., 10c; oz., 40c; ¼ lb., \$1.25.

RED YELLOWS RESISTANT. Not as large as Mammoth Rock Red, but darker and more uniform color. Pkt., 15c; ½ oz., 75c; oz., \$1.25; ¼ lb., \$4.00.

SAVOY CABBAGES

MARVIN'S SAVOY. A large solid head, very early. Pkt., 10c; oz., 35c; ¼ lb., \$1.00.

IMPROVED AMERICAN SAVOY. The best of the main crop of Savoy leaved cabbages. The vigorous short stemmed plant forms a large, fairly solid head, sweet and tender. Pkt., 10c; oz., 35c; ¼ lb., \$1.00.

Cabbage worms are quickly disposed of by dusting young plants lightly with a mixture of 1 lb. calcium arsenate to 10 lbs. of gypsum or lime. Use a duster in applying it, as it will burn if applied too thickly. See page 103 for dusters and page 102 for the insecticides.

Enclosed find my order for Cabbage seed.

Would like to say the seed I bought from you last year was fine. I did not see one with the yellows. We had a season last year to test them, very dry, but they sure did fine.

Hoping it will be as good this year. I am

Yours truly,

CAULIFLOWER is an exacting crop, yet success is easy where the conditions are right. Like radishes, this plant makes quick growth in cool weather. Start the first crop early in the house and transplant into rich, light soil, where plenty of water can be given. Cabbage worms may be killed by Slug Shot, Pyrox or arsenate of lead used before the heads begin to form. To bleach the heads tie up the leaves over them.

Vaughan's Select Snowball. This closely resembles New Snowball but has the additional features of more foliage for protection and is more uniform in heading. The seeds are about one-third smaller. Pkt., 25c; ¼ oz., \$1.25; ½ oz., \$2.00; oz., \$3.50; ¼ lb., \$12.00.

Vaughan's New Snowball. For early outdoor planting and forcing. A well-grown head will measure 9-10 inches across and have depth in proportion, will be solid, and have a perfectly white core. It is dwarf in growth, and earlier than any other sort. This strain is also extensively planted for late summer and fall market. Pkt., 25c; ¼ oz., 80c; ½ oz., \$1.50; oz., \$2.75; ¼ lb., \$9.50.

Vaughan's Earliest Dwarf Erfurt. Before the advent of Vaughan's "New Snowball," Earliest Dwarf Erfurt was the standard of early Cauliflowers. In all respects it is similar to Vaughan's New Snowball, but a few days later. Pkt., 25c; ¼ oz., 80c; ½ oz., \$1.50; oz., \$2.75; ¼ lb., \$9.50.

Dry Weather Cauliflower. This sort is grown to provide, as far as possible, against hot, dry-weather contingencies of crop failure. It is a very sure header, heads larger than Snowball, and is snow-white, second early. Pkt., 25c; ¼ oz., 80c; ½ oz., \$1.50; oz., \$2.75; ¼ lb., \$9.50.

Danish Snowball. Later than Vaughan's "New Snowball," A splendid second early. Although not so early, nor as even as Vaughan's Snowball, it gives satisfying profit. Pkt., 25c; ¼ oz., 80c; ½ oz., \$1.50; oz., \$2.75; ¼ lb., \$8.50.

AUTUMN GIANT. In Southern localities this meets with favor as a large heading late fall sort. Pkt., 10c; ½ oz., 35c; oz., 60c; ¼ lb., \$1.75.

EXTRA EARLY PARIS. Very dwarf and early, for summer planting. Pkt., 25c; oz., \$1.50; ¼ lb., \$5.00.

LARGE EARLY ERFURT. This is a vigorous growing, hardy variety. The very best sort for late spring. Pkt., 10c; ½ oz., 75c; oz., \$1.35; ¼ lb., \$4.75.

LENORMAND'S SHORT STEM. Bears large white heads on short stems. Pkt., 10c; oz., 85c; ¼ lb., \$3.00.

Celery Cabbage or Chinese

Pe Tsai. See Novelty Page. Pkt., 10c; ½ oz., 35c; oz., 60c; ¼ lb., \$2.00; lb., \$7.00.

Celery Cabbage "Paoting"

Genuine "WONG BOK" type. We have obtained from our Chinese growers this new variety of the Wong-Bok type which differs from the Pe Tsai type in being shorter and thicker. Will mature firm heads thru the summer months. It has produced heads weighing 15 pounds and stands long before going to seed. In crispness and tenderness it resembles the Pe Tsai and has the same fine, celery flavor. It is the largest of the Chinese cabbages and is probably the safest variety for an amateur to plant in the spring. Pkt., 10c; ½ oz., 20c; oz., 35c; ¼ lb., \$1.00.

Cabbage Yellows Disease Resistant.

The loss of large acreages by the disease called yellows caused an investigation by the plant pathologists of the University of Wisconsin. No claim is made of immunity from other diseases, such as clubfoot, stem rot or black rot. We list varieties in order of maturity and offer only stocks that have been tested in the diseased cabbage fields of Wisconsin and found to be 80 to 98% yellows resistant. Special prices on quantities to Market Gardeners.

WISCONSIN COPENHAGEN. Pkt., 25c; ½ oz., 90c; oz., \$1.50; ¼ lb., \$5.00.

Sweet Corn is Supreme

MAMMOTH WHITE CORY

Vaughan's Mammoth White Cory. The great popularity of this extra early Sweet Corn is due to the fact that it was successfully bred for three important qualities—Earliness, Size, Sweetness. Placed in whichever order you wish, these are the dominant characteristics of this favorite corn. One of the earliest; the ears are as long with two to four more rows of kernels set close, so there is no loss of space on the cob. The grains are of medium size, broad, very white and of high table quality. The stalks are a little less than medium size, vigorous and prolific, usually averaging two ears to the plant. Our seed is grown and bred on our own farms. No more careful selection can be practiced than we use, and ears are dried in crates to insure high germination.

Pkt., 10c; 1 lb., 40c; 2 lbs., 75c; 10 lbs., \$2.50.

Stowell's Evergreen. The great standard main crop variety of Sweet Corn. The stalks are strong and vigorous and grow 7 to 8 feet high, and bear ears 8 inches long, with 16 or more rows of the finest sugary grains. We have specialized in this grand sweet corn for many years, and we say with confidence our strain is the best that money can buy. Vaughan's Eastern grown seed develops a larger percentage of sugar than seed grown in the Western States. We quote prices here for both.

SELECT EASTERN-GROWN—Pkt., 10c; ½ lb., 30c; 1 lb., 50c; 2 lbs., 90c; 10 lbs., \$3.00.

WESTERN-GROWN, EASTERN STOCK SEED—Pkt., 10c; 1 lb., 40c; 2 lbs., 75c; 10 lbs., \$2.50.

WHIPPLE'S EARLY YELLOW. A 14 rowed ear, 7 to 8 inches in length, of good quality, maturing between Golden Bantam and Bantam Evergreen. Pkt., 10c; 1 lb., 40c; 2 lbs., 75c; 10 lbs., \$2.75.

GOLDEN GEM. See Novelty Page. Pkt., 25c; ½ lb., 50c; 1 lb., 90c; 2 lbs., \$1.65.

I can recommend your Yellows Resistant Cabbage—I have been raising them for 6 years. They proved 100 per cent. Five of my neighbors are sending for the seed.

JOHN ELMORE,
Martinsville, Ill.

SWEET CORN is the home garden crop. Scientists say the sugar content of such a variety as Stowell's Evergreen is 5 per cent; and within thirty minutes after it has been picked, this percentage will begin to decrease through chemical action. Only the home gardener, therefore, can enjoy it at its best, this greatest of American table delicacies. Sweet Corn may be sown earlier than field corn. May 1st is usually safe in the latitude of New York and Chicago. Fertilizer will give a good start and an early harvest. Our special strains of Sweet Corn include Bantam Evergreen, which is

HOWLING MOB. A large-eared fine second early corn. About the same season as Early Champion, ear slightly larger. The kernels are small in size, of delightful flavor. Pkt., 10c; 1 lb., 40c; 2 lbs., 75c; 10 lbs., \$2.50.

EARLY CROSBY. A high quality, second early, very popular in Eastern sections, especially New England. Ears about six inches long, 14-rowed, grains square, very white, sweet and tender. Pkt., 10c; 1 lb., 35c; 2 lbs., 65c; 10 lbs., \$2.25.

Celery You Can Grow

CELERY is often thought to be difficult to grow. Every home gardener whose soil is sufficiently light and rich to produce good lettuce and cabbages may easily produce a family supply of this most welcome delicacy. Start the seed indoors and set the plants out around the middle of May, 8 inches apart for the early kinds and a foot for the winter varieties. Where the soil is very rich they may be grown closer. Keep them growing and do not work over the plants when they are wet with dew or rain. Vaughan's Celery Seed is of the finest strains in the world and is used by market gardeners selling to the most exacting trade.

For the Home Garden—We commend Emperor and Golden Self-Blanching.

Golden Self-Blanching.

Vaughan's Selected Stock. The choicest sort of delicious celery; it excels all other yellow varieties. Dwarfed, larger bunches, with broad, heavy stalks, which blanch into a rich, appetizing, golden yellow, make this the favorite, most popular, golden celery on the market. Though the stalks are broader and heavier than the white varieties, the quality in sweetness, tender crispness, delicious flavor and absence of strings, make it a most delightful table necessity. The French originators of this type have lately introduced a re-selected strain which they are now using. It is earlier and stronger growing than the older type. We offer the two strains separately, the French grown by the originators and American grown.

TALL STRAIN, Selected French-Grown.—Pkt., 20c; ½ oz., 90c; oz., \$1.50; ¼ lb., \$5.00.

DWARF STRAIN, American-Grown.—Pkt., 10c; ½ oz., 50c; oz., 80c; ¼ lb., \$3.00.

White Plume. Of the white varieties this is recognized the best. Among market growers it is popular because it has excellent marketable qualities; with consumers it is a favorite because of its crisp, tender, and altogether desirable eating qualities. Its habit of growing is vigorous, stalks are uniformly white, and large sized.

SELECTED STOCK—Pkt., 10c; ½ oz., 25c; oz., 40c; ¼ lb., \$1.35.

Giant Pascal. The stalks are very large and solid, crisp and of rich nutty flavor. It blanches very easily and quickly. The heart is golden yellow and has a very attractive appearance. For Fall and Winter, this is a splendid sort. It is a selection from "Golden Self-Blanching," and possesses many of the qualities of that strain, with the added value of keeping quality. It is certainly one of the best varieties owing to its splendid keeping quality and marketableness. Pkt., 10c; ½ oz., 25c; oz., 45c; ¼ lb., \$1.25.

Celery—Golden Phenomenal. See Novelty Page. Pkt., 25c; ½ oz., \$1.75; oz., \$3.00.

Emperor. A quality variety—almost in a class by itself for flavor and brittle-ness. It is dwarf in type (hence easier to blanch than taller kinds), second early and a good winter keeper. The stems are round (not moon-shaped). Bred especially for freedom from hollow stalks. Pkt., 10c; ½ oz., 25c; oz., 45c; ¼ lb., \$1.50.

Easy Blanching. A recent introduction of merit. It is a vigorous grower, of medium dwarf height, stalks thick, quality excellent. A most desirable variety for the amateur. Second early. Pkt., 10c; ½ oz., 50c; oz., \$1.50.

SELECTED STRAIN—Especially for market gardeners. Pkt., 15c; ½ oz., 65c; oz., \$1.25; ¼ lb., \$4.00.

New Celery

Golden Plume

IN our trials the last two seasons we have been much impressed with this new variety. A selection from or a cross with the Golden Self-Blanching, the stalks are short—the heart is large, with a protecting tuft of foliage in the middle. More vigorous than Golden Self-Blanching, it withstands heat and blight better. It is a beautiful gold in color, brittle and of the highest table quality. It deserves a thorough trial. Pkt., 20c; ½ oz., \$1.00; oz., \$1.65; ¼ lb., \$5.00.

NEW CELERY GOLDEN PLUME

WINTER QUEEN. An excellent winter sort with double the amount of heart of any known celery. A beautiful plant of close habit and compact growth; crisp and has delicious nutty flavor. Pkt., 10c; ½ oz., 25c; oz., 40c; ¼ lb., \$1.15.

SOUP CELERY OR SMALLAGE. Green foliage used for soups. Oz., 15c; ¼ lb., 45c.

KALAMAZOO or Giant White Solid. A tall, heavy, solid and very white late variety. A favorite in many localities where celery is grown for market. Pkt., 10c; ½ oz., 25c; oz., 45c; ¼ lb., \$1.35.

Vaughan's seeds are like good deeds,

You scatter along the way,
They come back to you 100 fold,
Your efforts to repay.

(That's what I think of Vaughan's).

Golden Bantam. Now the most popular of all first early Sweet Corns and planted in nearly every garden. Golden Bantam is about a week later in season than Cory or the first earlies. The ears are borne two to a stalk, and are about six inches in length with eight rows of kernels on a cob. We grow our seed of this sort on our own farms in Michigan. Market gardeners are at last able to sell a merchantable sized ear of corn superior to any on the market. Pkt., 10c; ½ lb., 30c; lb., 50c; 2 lbs., 90c; 10 lbs., \$3.00.

60-Day White. Among the many extra early sweet corns recently introduced, this stands out because of its extreme earliness, large ear and good quality. With our Chicago market gardeners who have tried it "60 Day White" has been highly profitable. Height 3 feet, ears 10 to 12-rowed, 6 to 7 inches in length. Pkt., 10c; ½ lb., 30c; lb., 50c; 2 lbs., 85c; 10 lbs., \$2.75.

Pkt., 10c; ½ lb., 30c; lb., 50c; 2 lbs., 90c; 10 lbs., \$3.00.

Country Gentleman.

Is a late main crop variety. The ears which are 7 to 9 inches long are borne on stalks 6 to 7 feet high. The grain is small and rather round and crowded together on the cob, instead of forming in defined rows. Deliciously tender and sweet.

Pkt., 10c; ½ lb., 30c; lb., 50c; 2 lbs., 90c; 10 lbs., \$3.00.

IMPROVED EARLY CHAMPION.

ADAM'S EXTRA EARLY.

STOWELL'S EVERGREEN

COUNTRY GENTLEMAN

EARLY EVERGREEN. Very large ears are characteristic of this sort. It is earlier than Stowell's Evergreen by 8 to 10 days. This variety remains green for a long time and in northern localities is a surer cropper than Stowell's Evergreen, of which this is a smaller sort.

Pkt., 10c; lb., 40c; 2 lbs., 75c; 10 lbs., \$2.50.

GOLDEN BANTAM

BLACK MEXICAN. Everyone who has seen this Corn remembers it and the delicious sweetness and fine grain qualities in spite of its dark color, making it more and more of a favorite every year. Eight to ten-rowed; ears about 8 inches long; kernels bluish purple to black and rather flat. Pkt., 10c; lb., 35c; 2 lbs., 65c; 10 lbs., \$2.25.

NEW CUCUMBER—"The Vaughan."

This is as much in advance over the Davis Perfect variety as the "Davis" was over the old extra Long White Spine sorts. Compared to the other (Long White Spine varieties) it is much darker in color, more uniform in shape and size, thinner, and more prolific. It is the ideal American forcing variety, as well as an outdoor sort. Our customers who grow it have greenhouse cucumbers raised outdoors. J. C. Robinson of Waterloo, Nebraska, writes: "We have tried the Vaughan Cucumber out for two years in our trials. It certainly will displace most other kinds, in our opinion." Pkt., 15c; oz., 40c; ¼ lb., \$1.25; lb., \$4.50.

Cucumber, Earliest of All.

A fair size, dark green White Spine. The earliest of good quality we have tried, of especial value in localities where blight prevents the maturing of the late and longer sorts; also of value in the South for first crop. Home gardeners who wish to have the first cucumbers in their neighborhood should try this variety.

Pkt., 10c; oz., 20c; ¼ lb., 50c; lb., \$1.50.

IMPROVED WHITE SPINE. Medium size, straight, always fine yielding; light green. Pkt., 10c; oz., 20c; ¼ lb., 45c; lb., \$1.40.

ROCKY FORD (Klondyke). White Spine. A fine market garden sort—between the New Century and Arlington in size—slightly earlier, however. A wonderful keeper and shipper. Good dark green color. Pkt., 10c; oz., 20c; ¼ lb., 45c; lb., \$1.40.

EXTRA LONG WHITE SPINE. A great blight resister. It is thicker than "Davis Perfect," straight, smooth, dark shiny green, 8-12 inches long; with superbly flavored, tender, crisp flesh. It is early, vigorous and prolific. Select Stock. Pkt., 10c; oz., 20c; ¼ lb., 50c; lb., \$1.60.

DELTUS. A dark green cucumber nearly free from spine, may be used for forcing out of doors. Pkt., 10c; oz., 25c; ¼ lb., 75c; lb., \$2.50.

FORDHOOK FAMOUS—White Spine. As long as "Davis," slightly bent but very handsome, twelve to fifteen inches. Quality superb. Pkt., 10c; oz., 20c; ¼ lb., 50c; lb., \$1.65.

NICHOLS MEDIUM GREEN. Early, medium size, straight, smooth, dark green, good flavor, for pickling and slicing. Pkt., 10c; oz., 20c; ¼ lb., 45c; lb., \$1.40.

ODD CUCUMBERS

LEMON CUCUMBER. Not the same as the Garden Lemon, though similar in appearance. It is a real luscious flavored cucumber, a worthy addition to the list. Pkt., 15c; oz., 25c; ¼ lb., 75c; lb., \$2.00.

SERPENT OR SNAKE. A curious, usually much twisted cucumber. Pkt., 10c; oz., 25c; ¼ lb., 75c.

CUCUMBERS are close relatives of melons, but mature in about sixty days and may be brought to maturity with little trouble in the home garden. The seeds must be sown after the ground becomes warm, and the plants thinned to three or four to the hill. A very rich soil is the best precaution against insects and the blight. The striped beetle should be kept away from the young plants by liberal applications of Slug Shot, powdered arsenate of lead or tobacco dust. The under sides of the leaves must be sprayed with nicotine to kill aphids.

For the Home Garden—The Vaughan is the finest table cucumber for the home garden. A pickling variety should be grown for pickles.

Cucumber, Early Fortune. An especially fine, medium length White Spine Cucumber much planted in the South for shipment to the Northern markets. It has a fine, dark green color which it holds for a long time after picking. Pkt., 10c; oz., 20c; ¼ lb., 50c; lb., \$1.50.

Vaughan's Improved Arlington White Spine. Is early, heavy yielding; it is a beautifully symmetrical, straight type cucumber, 7-10 inches long. Throughout its entire length, the skin is an attractive, glossy dark green; the flesh firm but tender, with delicious flavor; these surpassing qualities have made it a great favorite. In the Southern country it is a universally planted sort and Vaughan's strain of Improved Arlington White Spine is the standard for both home and market gardens. Pkt., 10c; oz., 20c; ¼ lb., 55c; lb., \$1.60.

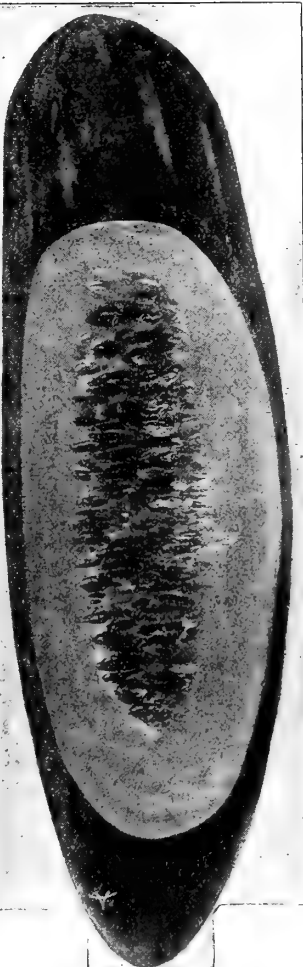

Davis Perfect. Fine length, slimness, beautiful dark green color, transparent-like flesh with deliciously cool, refreshing flavor, and enjoyable crispness, are distinguishing features and qualities of this, the most popular of the extra long white spine cucumbers. For indoor and outdoor planting it is most popular. Its extremely vigorous growth, makes it the best blight resister of the long sorts. Pkt., 10c; oz., 25c; ¼ lb., 65c; lb., \$2.25.

Improved Long Green. Vaughan's strain of "Long Green" is a strain improved and developed by reselection. The vines of our strain are very vigorous, and productive; the fruit (12 inches long) is formed almost as early as on the short sorts. As a cucumber of the "black spine" variety, for slicing and for pickles, this is one of the very best. The flesh is very firm and crisp and has a distinctive fine flavor, quite its own; they make excellent pickles, and when yellow and ripe the best sweet pickles. The fine, dark green color, the size, shape, crispness, and flavor, make this the best of the "black spine" varieties. Pkt., 10c; oz., 25c; ¼ lb., 65c; lb., \$2.25.

Japanese Climbing. This is a distinct variety having a heavy vine and large leaves and being quite resistant to disease and insects. It is a black spine cucumber and may be used for pickling or slicing. It is good quality and of a dark green color when young turning to a russet-yellow when ripe. May be used on a trellis if desired. Pkt., 10c; oz., 25c; ¼ lb., 60c; lb., \$1.75.

Your catalogue is so lovely—have been meaning to tell you how much help it was to us in the "Successful Farming" flower contest a while ago—because your illustrations are in color.

DAVIS PERFECT CUCUMBER
Less Than Half Natural Size

and All the Pickling Types

Westerfield's Chicago Pickle. Since we first introduced this pickle years ago, it has been a distinguished success; it secures the highest market price because of its known splendid qualities, that meet the most exacting condition of critical pickle makers, who supply fancy and highest priced goods to the market. The maintenance of fine shape, right size and excellent quality in this splendid pickle are, as always have been, matters of great pride with us; and so, the fine pickle makers throughout the country willingly pay the higher price it is necessary for us to get for our selected seed. When ripe the fruit is medium size, pointed at both ends, has large prominent black spines.

Pkt., 10c; oz., 15c; ¼ lb., 45c; lb., \$1.40.

Improved Jersey Pickle. This is a famous kind for making vinegar pickles. Owing to its light color it makes what pickle men call "light" pickles, excellent for "Gherkins." Its shape in the fruit is broader at the tip than at the stem end while in the pickle state it is nearly straight. It is very prolific. Our seed is very uniform and finely selected. Plant Vaughan's Seed.

Pkt., 5c; oz., 15c; ¼ lb., 45c; lb., \$1.40.

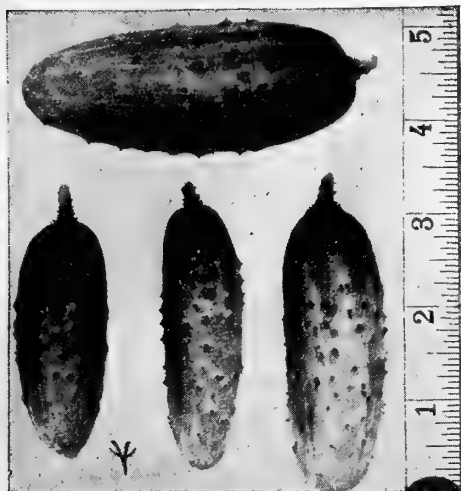

Snow's Fancy Pickling. This is a selection made originally from the "Chicago Pickle" by a veteran pickle grower in the West. The type is shorter when ripe than the Chicago Pickle and is broad at the stem end, tapering slightly to the tip. The small pickles, although quite similar to the Chicago Pickle, have an additional value where blight prevails. The fruit being smaller, the blight does not sap the strength of the vine to the detriment of a crop. We offer a strain of most carefully selected seeds from fields inspected by us and under our own direct supervision.

Pkt., 10c; oz., 15c; ¼ lb., 45c; lb., \$1.40.

Grow Quick. A pickle type similar to Chicago Westerfield in size and shape, but a week or ten days earlier. It usually matures its crop before the early blight appears.

Pkt., 15c; oz., 30c; ¼ lb., 75c; lb., \$2.00.

Cucumber beetles are easily controlled by dusting the young with a mixture of one part calcium arsenate and ten parts lime or gypsum. This should be carefully mixed and applied lightly with a blower, as too thick an application will burn the leaves. Beetles usually infest the blossom ends, and the newly formed blossoms should be dusted until the plants are well established. See pages 102 and 103.

WEST INDIA GHERKIN. A very small oval prickly sort, distinct from all others. It is grown for pickles only and must be used when young. Pkt., 15c; oz., 30c; ¼ lb., 75c; lb., \$2.00.

SWEET MARJORAM
(Marjoram, Marjolain)

Lettuce from Your Garden

LETTUCE has become a year-round necessity on our tables, with the discovery of vitamins and the part they play in maintaining good health. It is a crop with which the home gardener may excel as he supplies the few essentials. Leaf lettuce may be grown satisfactorily in almost any soil, and since it may be eaten with relish long before it has matured, it usually supplies the first salad of the year from the garden. Head lettuce is more difficult, but success is sure if it be started indoors, so that plants may be set out at the time leaf lettuce is sown in the open ground; always provided that the head lettuce have a rich, quick soil; that is, one which is light and warm, and very heavily manured. Water is also essential to the rapid and uninterrupted growth which produces good cabbage heads. The butter head types are best for early, and the crisp heads, such as New York, Iceberg and Mignonette for the warmer weather.

For the Home Garden—All Seasons and Hanson of the butter heads; Iceberg and New York of the crisp heads, and Black Seeded Simpson and Prizehead of the leaf lettuces are recommended, with any of the Cos varieties, which will often succeed where the cabbage heads fail.

Vaughan's All Seasons. In 1879 we introduced this distinctive variety. It immediately leaped into popular favor, in which it has gained through all the years, and is today an unapproachable favorite. Heads are large, solid and handsome, almost as large as Flat Dutch Cabbage; leaves are grayish green, never spotted or brown; they are broad and thick and have decided buttery flavor, embodying all in the term excellent; the inner leaves blanch beautifully. This sort is a sure header and slow to run to seed. Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 60c; lb., \$2.00.

Improved Hanson. The most reliable header for home garden. On all markets—a well known, highly approved lettuce. Globe-shaped, large, well formed, firm head of broad leaves so compact that the inner ones are blanched almost white. The outside leaves are glossy green and handsome, the inside ones are very tender and deliciously sweet, and all are beautifully crinkled and curled. While these are quickly salable, we are sure most of our readers would insist on eating their own crops! The location of the beds must be one where a temperature of 55 degrees to 65 degrees can be kept during cold weather. A barrel may be used in which to confine the manure for growing. We print and give FREE with orders for our Mushroom Spawn, a leaflet, "How to Grow Mushrooms." We supply the highest quality of Mushroom Spawn to the largest commercial "caves" in the country, both from our Chicago and New York stores.

LETTUCE SEED IMPROVEMENT. In recent years great progress has been made in the improvement by the selection and breeding of our strains of lettuce. Practically all of our varieties are now the progeny of one original "perfect" plant of the individual variety. The result is great uniformity and freedom from "rogues" or "off" plants.

Delicious Oyster Plant

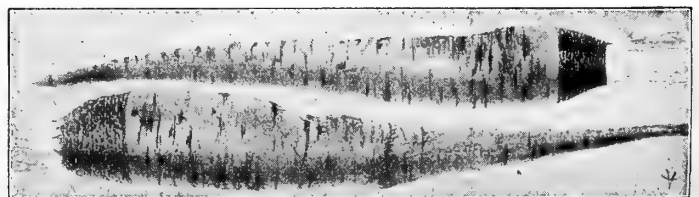

THOUGH not as generally grown as it should be, this is, when cooked, a really delicious vegetable, surpassing in richness of flavor both carrots and parsnips. It acquires a decided oyster flavor after a good frosting. Roots for winter use should be lifted in the fall while those for early spring use may be left in the ground, but lifted before they start to grow. Salsify is boiled like parsnips or carrots, or after half boiling can be grated and made into flattened balls and fried like oysters.

Mammoth Sandwich Island. This variety is much more uniform in growth than the old standard "Long White" Variety; it is twice the size and weight; the roots are of superior quality and most delicate flavor. Pkt., 10c; oz., 30c; ¼ lb., 85c; lb., \$2.75.

Long White Salsify. Pkt., 10c; oz., 30c; ¼ lb., 85c; lb., \$2.75.

MELONS are a long season crop requiring for their best development a sandy soil which quickly warms up, a season of 90 to 100 days growing weather, hot sun and ample irrigation. Though these conditions are best found in irrigated sections of the West, there is practically no region in the United States in which some variety cannot be successfully grown. The list offered on these pages includes all varieties of merit, and is so complete that gardeners living in every section of the country may find here a variety with which they can succeed. Seed must not be sown until the ground is warm, and in the North it will pay to start the seed in a hotbed or indoors in paper pots or in a piece of thick turf. Plant in hills, allowing ample room, and thin out the plants to four in a hill when they begin to vine. The cucumber beetle may be kept off with Slug Shot or Pyrox and aphids must be killed with a nicotine spray.

For the Home Garden—The varieties which are known to succeed in your locality are recommended, as many conditions enter into success with melons. Milwaukee Market is especially valuable for the home garden, growing to a large size and possessing table quality which few melons equal. The Osage type is usually easier to grow than the Gem type for an amateur.

Vaughan's Milwaukee Market.

This seed grown by ourselves in Michigan. (See illustration.) It originated as a cross between the old Surprise and a Gem melon. For a fine home melon and a market-wagon variety it has no superior. The skin is light green, fruits nearly round with slight sutures, flesh salmon, wonderfully sweet, with almost no stringiness. Every home gardener who can grow muskmelons should plant this. Pkt., 10c; oz., 25c; ¼ lb., 75c; lb., \$2.50.

Rittenhouse Special.

A medium size, oval melon with prominent ribs, heavy netting, medium thick finely grained pink flesh. Its sweet, spicy flavor is present for some time both before and after maturity. Medium to early. Pkt., 10c; oz., 25c; ¼ lb., 75c; lb., \$2.50.

Vaughan's Hoodoo or Hearts of Gold

Introducer's Strain. The best salmon-fleshed Gem Melon. Introduced by Vaughan's Seed Store. Quality—fine grained, not stringy and of the sweetest flavor. Size and shape—just right, so it may be served cut in halves. Flesh and Color—deep orange, extremely thick. As a shipper—uniform, like "peas in a pod." Netting is ideal, heavy and close. Prolific and uniform, produces well under favorable conditions and withstands blight better than most varieties.

HOODOO melons from Michigan points bring highest market prices in competition with the whole United States.

SELECT STOCK—Pkt., 10c; oz., 25c; ¼ lb., 75c; lb., \$2.50.

STANDARD STOCK—Pkt., 10c; oz., 20c; ¼ lb., 50c; lb., \$1.60.

EARLY KNIGHT or Sweet Air.

Very popular around Washington, Baltimore and Philadelphia. Being a green-fleshed melon of superior flavor and correct size, is well suited to that region, and commands the highest market price. It is 5 to 6 inches across and 7 to 8 inches long. The netting is good and, crated, stand long-distance shipping. The flesh is thick, color dark green blending to light pink near the center. Pkt., 10c; oz., 20c; ¼ lb., 45c; lb., \$1.50.

MONTREAL MARKET NUTMEG.

The largest of the nutmeg varieties. This melon is extensively raised near Montreal, being sown and grown in cold frames until ready to set out. Skin is dark green, flesh green. Pkt., 10c; oz., 15c; ¼ lb., 45c; lb., \$1.40.

BANANA. Cucumber shape. Delicious odor. A novelty melon for the home garden. Pkt. 10c; oz., 20c; ¼ lb., 45c; lb., \$1.50.

Honey Rock.

See Novelty Page. Pkt., 10c; oz., 35c; ¼ lb., \$1.00; lb., \$3.00.

Hale's Best.

An oval shape, heavy netted melon of exceptionally thick meat of salmon color. One of the best shippers. Pkt., 10c; oz., 20c; ¼ lb., 60c; lb., \$1.75.

IMPROVED JENNY LIND.

Vaughan's Selected Stock. Rind thick at ends, which are flattened and are not easily broken when crated, or basket-packed for shipment. The quality of its yellowish green flesh is unsurpassed. Pkt., 10c; oz., 15c; ¼ lb., 35c; lb., \$1.25.

MANGO MELON OR VEGETABLE

PEACH. Orange shaped, golden yellow flesh. Makes splendid mangoes, stuffed like Peppers. For sweet pickles, pies and preserving. Cooking directions on packets. Pkt., 10c; oz., 25c; ¼ lb., 75c.

TIP TOP.

A melon we recommend to every lover of this luscious fruit and to every gardener who grows for the market. It is a yellow-fleshed melon of the very best quality. It is sweet, juicy, of finest flavor, edible to the very rind. A strong grower, and heavy yielder. Selected Stock: Pkt., 10c; oz., 20c; ¼ lb., 60c; lb., \$2.00.

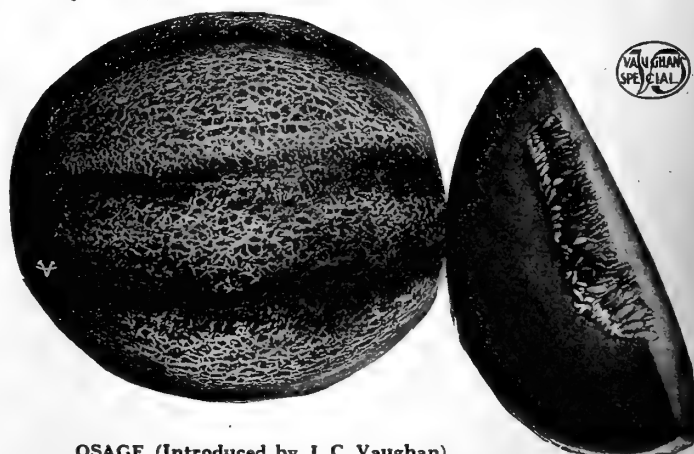

HOODOO OR HEARTS OF GOLD

Vaughan's Paul Rose.

This is another melon introduction of Vaughan's Seed Store, and fills every requirement a first-class melon should have. Paul Rose is the result of crossing Osage and Rocky Ford, an exceptional combination of melon qualities. It is an ideal marketing melon, and does not break down in shipping. In season it is 10 days earlier than Osage. Pkt., 10c; oz., 20c; ¼ lb., 45c; lb., \$1.50.

Melon, Honey Dew.

An old-time French melon imported by Vaughan's Seed Store for a melon specialist in Michigan; later found of good commercial value. The skin is perfectly smooth, of a delicate yellow color with incidental warts in scattered fashion. The rind is thin but very firm, the flesh is very thick and the color blends from a near white at the rind to emerald green at the seed cavity which is of medium capacity. The flesh is very sweet and juicy and possesses a peculiar honey flavor. In short season localities it should be started on sods in the hotbed, as it is several weeks later than the Rocky Ford. Honey Dew is best when quite ripe. Store a few days after picking. Pkt., 10c; oz., 25c; ¼ lb., 65c; lb., \$2.00.

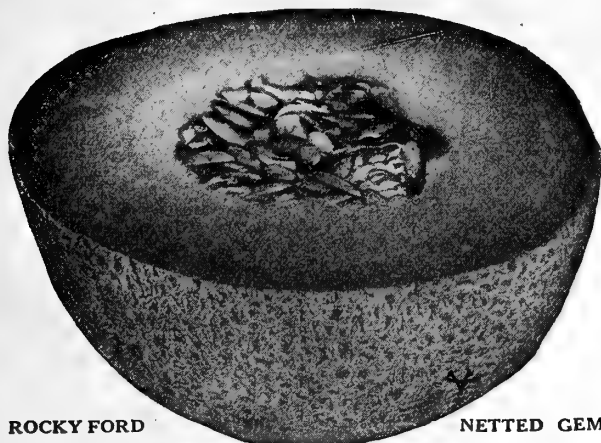

OSAGE (Introduced by J. C. Vaughan)

Don't overlook Vaughan's Cook Book of Vegetables; many tried vegetable recipes. Free with every \$1.50 order for packets and ounces—if asked for on order.

For the striped cucumber beetle which attacks melon plants dust the young plants with a mixture of calcium arsenate, 1 lb., and gypsum or lime, 10 lbs., applied lightly with a duster. It will burn if applied too thickly. Aphids may appear under the melon leaves. The vine should be lifted and the leaves sprayed with Black Leaf 40.

ROCKY FORD

NETTED GEM

THE ROCKY FORD TYPE

Rocky Ford Netted Gem. Of the green muskmelons Rocky Ford is the recognized standard of excellence. To secure the real high-class quality possible in this melon, it is necessary to have seed saved from choicest specimen melons only. We offer two grades of seed: Vaughan's Selected Stock which is saved from specimens of the highest class market melons—since "like produces like"—and Standard Stock saved from field-run melons from a crop in which all rogues, or untrue vines, have been discarded.

Picture at top shows specimen grown from Vaughan's Selected Stock. Note the small seed cavity and thickness of flesh. Our strain is the popular gold-lined tint.

New Muskmelon Pollock, 10-25. Salmon tint. Very uniform in highest quality; vigorous and early. Cuts with a golden center shading to a green at the rind. Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 45c; lb., \$1.50.

EXTRA EARLY VARIETIES

New Cantaloupe, Oka. This is a variety from Canada, of Hackensack shape—a cross between Montreal Market and Banana—pink flesh and small seed cavity. It was originated by Rev. Father Athanasie, of the Trappist Monastery at LaTrappe, Quebec. It is recommended to home gardeners as a short season melon of excellent quality. Pkt., 10c; oz., 25c; $\frac{1}{4}$ lb., 75c; lb., \$2.50.

New Melon, Golden Champlain. It is well netted, grows to a good size, is thick fleshed and very sweet. It is recommended for latitudes where seed must be sown after May 15, and a harvest is desired in August. Pkt., 10c; oz., 25c; $\frac{1}{4}$ lb., 65c; lb., \$2.25.

Bender's Surprise. This new melon is a large thick-fleshed, heavily netted fruit somewhat resembling our Milwaukee Market. Its flavor is wonderfully sweet with almost no stringiness. It matures early and is an excellent home garden variety. Pkt., 10c; oz., 25c; $\frac{1}{4}$ lb., 65c; lb., \$2.25.

WATERMELONS may be grown under favorable conditions in the North though it requires 100 to 120 days to mature. Soil such as will mature good muskmelons is needed, with plenty of hot weather and no lack of water. Room for the vines to wander is required, preferably 8 to 10 feet between hills both ways. Avoid lifting the vines, and use only hand tools in cultivation.

New Wonder. The earliest high quality melon for the Northern garden. Similar to Kleckleys in shape, but larger and has harder rind. Pkt., 10c; oz., 25c; $\frac{1}{4}$ lb., 65c; lb., \$1.75.

Cole's Early. The Northern States' favorite. As an early melon it is the standard of high quality. The flesh is rich, deliciously sweet and crisp. It is oblong-shaped, about 20 inches long, 12 inches through; skin mottled green, thin brittle rind, therefore not a good shipper. Pkt., 10c; oz., 15c; $\frac{1}{4}$ lb., 35c; lb., \$1.15; 5 lbs., \$4.50.

Kleckley Sweets. This is an old established variety. In its culture the greatest care is always taken by us to retain the excellent qualities for which it has become famous. Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 50c; lb., \$1.50; 5 lbs., \$6.50.

ONION SEED may be sown as soon as the ground can be prepared. If extra large onions are desired in Northern latitudes, seed may be sown in hotbeds or indoor boxes. It is best to transplant them into paper pots and allow their roots to become well established before setting them in the garden. By this method such varieties as Prizetaker and Ailsa Craig can be grown to extraordinary size. Amateurs can thus produce in their own gardens in the short Northern season, bulbs much larger than the so-called Spanish onions grown in the South and of the same mild flavor. It should be attempted only where the soil is favorable and irrigation possible. If onion seeds are sown in the open at the same time onion sets are put in the ground, the home garden may enjoy young onions from seed in midsummer, thinning out the rows for this purpose. If it is desired to mature onions for winter use and storage, one of the standard globe varieties should be chosen as they are the best keepers. The Southports, Danvers, Ohio Globe and Ideal Globe are good sorts.

Southport Yellow Globe. The Vaughan strain of this onion is the most uniform on the market today. It is ball-shaped and not so elongated as to make any undersized specimens seem like picklers. Our Eastern seed bulbs are hand sorted by ourselves and the seed grown under our direct supervision. The ideal heavy yielding, long keeping Golden Yellow market onion.

EASTERN-GROWN SEED—Finest type; sold by us for many years. Pkt., 15c; oz., 35c;

$\frac{1}{4}$ lb., 90c; lb., \$3.00; 5 lbs., per lb., \$2.75;

CALIFORNIA-GROWN SEED—Pkt., 10c; oz., 25c; $\frac{1}{4}$ lb., 75c; lb., \$2.50; by express over 5 lbs., per lb., \$2.25.

Southport Red Globe.

In shape this onion is similar to our Southport Yellow Globe but a little deeper. The color is a rich dark red showing its years of Eastern breeding. California grown seed produces a lighter colored onion. A wonderful keeper with finely bred neck and a heavy yielder.

Pkt., 10c; oz., 25c; $\frac{1}{4}$ lb., 75c; lb., \$2.50; by express over 5 lbs., per lb., \$2.25.

Vaughan's Ideal White Globe.

A strikingly handsome onion; very early, ripens evenly and is a fine keeper; the small, high-bred neck tells the story of quality; it is a true globe, pure white.

Pkt., 10c; oz., 40c; $\frac{1}{4}$ lb., \$1.15; lb., \$4.00; 5 lbs., per lb., \$3.75.

Japanese or Ebenezer.

There has been a tremendous demand for this yellow skinned Onion for the growing of Onion Sets. Japanese Onion Sets produce a much larger tonnage of marketable Onions than does the old Strasburg or Danvers. Moreover, a smaller per cent of the sets run to seed. Ebenezer is a fine keeper, mild and well flavored.

Pkt., 10c; oz., 30c; $\frac{1}{4}$ lb., 85c; 1 lb., \$3.00.

Vaughan's Special Yellow Globe. ("MOUNTAIN")

DANVERS.) An early Yellow Globe, slightly smaller than Southport. It produces a fine market onion. In some seasons early aphid damages the late onion crop but does not harm this variety, due to early maturity. Pkt., 10c; oz., 25c; $\frac{1}{4}$ lb., 75c; lb., \$2.50.

Vaughan's Special Red Globe.

Same shape, size and price as above but red.

Onion Sets and Plants

THE first home garden harvest in the spring is young onions from sets. If perennial sets are planted in the fall, a crop is reaped long before the first outdoor seeds have sprouted. Spring sets can be put into the ground as soon as it is able to be worked and in a few weeks the delicious young onions are ready to serve on the table. Plantings may be successively late into the summer, as long as the sets remain in good condition.

WHITE BOTTOMS. Pt., 25c; qt., 40c; $\frac{1}{2}$ pk., 90c; pk., \$1.50.

YELLOW BOTTOMS. Pt., 20c; qt., 30c; $\frac{1}{2}$ pk., 75c; pk., \$1.25.

RED BOTTOMS. Pt., 20c; qt., 30c; $\frac{1}{2}$ pk., 75c; pk., \$1.25.

Bermuda Onion Plants

These are new, and especially suitable for home gardens. Seed is sown early in Texas, and the plants are lifted, to be replanted in Northern garden, to produce sweet, mature onions of Bermuda quality. Ready April 1st. Per 100, 30c, post paid. Per 1000, \$2.00, postage extra; wt., about 6 lbs.

EGYPTIAN OR RED PERENNIALS. These we sell only in the Fall. Planted then, they produce very early green onions. Pt., 25c; qt., 40c; $\frac{1}{2}$ pk., 90c; pk., \$1.50.

WHITE MULTIPLIERS. For First Early Spring Bunching Onions. They are pure silvery white, which runs well up the stem, very sweet and mild flavor, superior to green onions from other sets. There are usually several stalks from a single bulb, which makes them very productive. They are ready for table earlier than any other. Pt., 25c; qt., 40c; $\frac{1}{2}$ pk., \$1.25; pk., \$2.00.

SHALLOT'S OR YELLOW MULTIPLIERS. Flavor much superior to ordinary onions. Pt., 20c; qt., 30c; $\frac{1}{2}$ pk., 80c; pk., \$1.35.

YELLOW POTATO ONION SETS. Grown for young onions. Pkt., 25c; qt., 40c; $\frac{1}{2}$ pk., \$1.25; pk., \$2.00.

Pint and quart prices for Onion Sets shown on this page include Parcel Post prepayment through first three zones. For farther zones add 5c per pound. In figuring cost remember each quart weighs $1\frac{1}{2}$ pounds.

EARLY WHITE WELSH ONION. The best winter bunching onions, forms no bulb. Plants can be propagated from seeds or divisions. Pkt., 10c; $\frac{1}{4}$ oz., 25c; oz., 40c; $\frac{1}{4}$ lb., \$1.00; lb., \$3.50.

WHITE BUNCHING ONION. A European onion for early spring and summer bunching. Makes a very nice white tender stalk. Sow at same time as Ideal White Globe. Pkt., 10c; oz., 35c; $\frac{1}{4}$ lb., \$1.00; lb., \$3.50.

EARLY WHITE

Grow Onions, Green or Dry

Prizetaker—American Grown. Among large onions this one is exceptional for size and beauty; it is of the same type as the large Spanish onions, imported and sold for high prices. Vaughan's American-grown seed has become thoroughly acclimated through many years of very careful, painstaking culture. Prizetaker is a yellow globe that matures to great size under right conditions; it requires a long season and should be started early in hotbed. When properly ripened it is a good keeper. Pkt., 10c; oz., 25c; $\frac{1}{4}$ lb., 75c; lb., \$2.50.

Large Red Wethersfield. An onion of very productive habit and a fine keeper. The skin is deep purplish red, which covers a round, somewhat flattened bulb of purplish white flesh. Moderately fine grain and mild flavor. In poor soil it does best, growing a thinner neck than in strong soil. It is standard in its class, in the South and Southwest where immense quantities are grown for market. Pkt., 10c; oz., 25c; $\frac{1}{4}$ lb., 60c; lb., \$2.00.

Fancy Yellow Globe Danvers. This onion is a standard among the large types; it is early, almost true globe-shaped, beautiful yellow skin, pure white flesh, of very fine quality. It has a good size, and a fine thin neck. Vaughan's strain is so near to globe-shape that it passes for globe on the market, and being several weeks earlier than Southport Globe, it sells for the higher early market prices. The crop ripens uniformly at one time, and its keeping quality is excellent. Pkt., 10c; oz., 25c; $\frac{1}{4}$ lb., 75c; lb., \$2.50.

Ailsa Craig—Vaughan's Selected Stock. It has a handsome appearance, being large—12 have been known to weigh 30 pounds—it has fine straw-colored skin; these qualities make it excellent for exhibition purposes, in which it is a successful competitor of large, imported Spanish onions. The shape is globular and it forms a fine thick neck which tells of its bred-in fine quality; it is, for a large onion, a splendid keeper; for eating raw it has no superior. It is mildly pungent in flavor, sweet and desirable. Pkt., 15c; oz., 35c; $\frac{1}{4}$ lb., 90c; lb., \$3.00.

Giant Gibraltar. A variety similar to Prizetaker. We offer American-grown seed raised from bulbs produced from European seed. The strain runs slightly larger in size than the usual run of Prizetaker. Pkt., 10c; oz., 30c; $\frac{1}{4}$ lb., 85c; lb., \$3.00.

Riverside Sweet Spanish This is a California grown strain of the Spanish (Denia) onion. With us it grows larger than the American Prizetaker and does not produce the "stiff-necks" usual in the Spanish type. It is the most popular onion in Southern California and when grown as a specimen attains enormous size, 4 to 4 $\frac{1}{2}$ pounds. Pkt., 15c; oz., 40c; $\frac{1}{4}$ lb., \$1.25; lb., \$4.00.

Yellow Globe Danvers. Same as Fancy Y. G. Danvers, except color, ripening and keeping are identical. Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 70c; lb., \$2.25.

Yellow Flat Danvers. A standard onion with many splendid qualities; a valuable general crop sort. It is of a medium size, quite thick through, but flattened, has coppery yellow skin, and creamy white flesh which is mild and of pleasant flavor. It combines large yield with very even ripening quality. Pkt., 10c; oz., 25c; $\frac{1}{4}$ lb., 60c; lb., \$2.00.

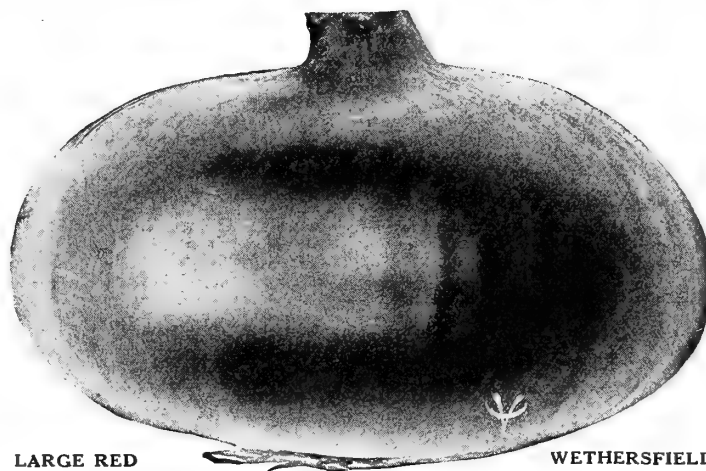

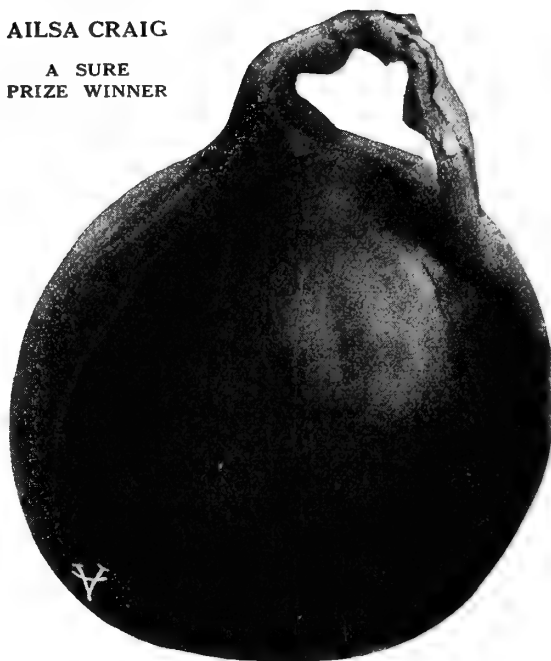

Mammoth Silver King. Averages 15 to 22 inches in circumference and weighs 2 $\frac{1}{2}$ to 4 lbs. It matures early and is uniformly large and of good shape; flat, but thick. Pkt., 10c; oz., 30c; $\frac{1}{4}$ lb., 85c; lb., \$3.00.

Crystal White Wax. This is a pure white flat onion, very popular in the South, especially in Texas. Also does well in the North. Very sweet. Tenerife seed. Pkt., 15c; oz., 45c; $\frac{1}{4}$ lb., \$1.40; lb., \$4.50.

Yellow Bermuda. In Bermuda and Texas a great many carloads of these very large onions are produced annually; they are shipped North for early spring use. Pkt., 15c; oz., 30c; $\frac{1}{4}$ lb., 90c; lb., \$3.00.

WHITE PORTUGAL OR SILVERSKIN. This beautiful white onion is a splendid sort for growing white onion sets, pickles and for early bunching green onions; for any one or all of these purposes it is extensively planted by growers who produce the varieties named as large white onions for fall and early winter use. Vaughan's White Portugal or Silverskin is a medium size bulb, flat shape, as shown in the illustration. It has fine mild flavor, and is best of the white onions for keeping. Pkt., 10c; oz., 35c; $\frac{1}{4}$ lb., 90c; lb., \$3.00.

Vaughan's Improved Early Ohio (Red). A week to 10 days earlier than other strains of the same variety. The reason for this is not only in the great care with which our seed is selected, grown and housed, but it is produced under conditions which are the most favorable in the Red River Valley of Minnesota, the natural home of high-class potato seed. In the Middle West Vaughan's seed produces earlier and better yields than native seed, no matter how carefully selected.

FOR more than twenty years we have had our Early Seed Potatoes produced in the Red River Valley of the North in Minnesota and Dakota. Today Vaughan's Red River Valley grown true to type Early Seed Potatoes are the standard of quality throughout the country. We have found these are earlier, more vigorous and better yielders than any grown elsewhere.

Certified Stock. We offer Michigan and Minnesota certified potatoes in several instances. Such stock has been inspected while growing by authorized state agents and found free from serious diseases and varietal mixture and is from vigorous fields. Sorting and grading to No. 1 grade is also required. Stock that is not certified is grown from certified seed and is recommended where certified is not to be had.

The prices in this catalogue represent values at the time this book went to press and are subject to market changes. Write for latest market quotations. We are large carload handlers of potatoes and are always in line with the prevailing market. On a quality basis we can always meet competition. Get our figures on large lots before ordering elsewhere.

Success with potatoes in the home garden requires a rich fairly light soil, not limed and free from fresh manure. Fertilizer strong in potash should be applied and spraying should be done thoroughly. The early varieties may be sown as soon as the soil can be prepared. The first spraying, with Bordeaux Mixture or Pyrox, should be given when the sprouts are a few inches high. They should be sprayed at regular intervals thereafter, mixing arsenate of lead with Bordeaux to kill beetles, and nicotine sulphate to kill aphids and leaf hoppers. Keep insects in control and potatoes growing.

For the Home Garden—Early Ohio and Irish Cobbler are the best early varieties, the former in the East and the latter in the West. One of the rural type is recommended for the late crop.

PIE PUMPKINS

LIKE melons, squash and cucumbers, pumpkins should be sown when the ground is warm and the plants need plenty of room to ramble. The partial shade of the sweet corn plot is an ideal place in the home garden. A few hills will provide amply for pies and jack-o'-lanterns for the fall festivals.

Vaughan's Small Sugar Pie Pumpkin. (See cut.) Is so well known as the best pie pumpkin it requires little description. The fruit is small to medium size, with solid fine grained flesh, and such a sweet, sugary, delicious flavor they all call for "more;" the seed cavity is small.

Pkt., 10c; oz., 15c; $\frac{1}{4}$ lb., 40c; lb., \$1.35.

Vaughan's Mammoth Prize. A really enormous variety; specimens have been grown as large as 200 lbs. Notwithstanding its immense size it is among the best pie pumpkins. Flesh fine grained, sweet and tender. Requires a late corn season to mature, needs plenty of room (one plant to a hill) to reach its largest size.

LIKE egg plants and tomatoes, peppers should be started indoors, as they take four to five months to mature. They are easy to grow, thrive in cool weather and will endure some frost. The plants should stand eight to eighteen inches apart in rows. They are constantly becoming more popular, both in salads and for use in cooking. A dozen plants will supply an average family.

Vaughan's Giant Magnum Dulce. This fine pepper has styled the "Salad King." But it is not in salad form alone that it excels, for there are other forms in which to prepare it. The seeds having been removed it may be stuffed, either with dressing as used in fowl or with meat, such as ground steak with onions or other seasoning. Sliced and fried as egg plant, it is a delicious dish, or it may be eaten raw, it is so mild. Vaughan's Magnum Dulce Sweet Pepper can be grown to immense size. Seven inches long and 4 inches through, but when grown so large the yield is small. To get a large yield of medium sized peppers, pinch off the "king flowers," the first ones to open. Vaughan's Seed of Magnum Dulce is saved from picked specimens.

Pkt., 15c; ½ oz., 50c; oz., 85c; ¼ lb., \$2.35.

California Wonder. See Novelty Page. Pkt., 20c; ½ oz., 60c; oz., \$1.10; ¼ lb., \$3.75.

New Sweet Upright Salad. Is an early, prolific, good sized, sweet, mild pepper; so mild indeed that it may be eaten raw. In the Northern States it is a most desirable sort; in habit the bushes are of medium height, and bear the peppers upright, not drooping. The size being medium they are just right for stuffing and frying; the bright glossy green color, which turns to a waxy red when ripe, makes this a very attractive pepper. Buy Vaughan's Seed—the best.

Pkt., 10c; ½ oz., 50c; oz., 75c; ¼ lb., \$2.25.

Crimson Giant, Early Pepper. An especially desirable sort for the Central States as it matures the earliest of all the large red sweet peppers. In habit the plant grows two and one-half feet high and bears a large quantity of fruits. The peppers are large, run even in both size and shape. The color is deep green when young and a rich red when ripe; flesh thick, sweet, and mild.

Pkt., 10c; ½ oz., 50c; oz., 90c; ¼ lb., \$2.75.

Chinese Giant. This standard variety is larger than "Ruby King," but not so large as "Magnum Dulce." It is very prolific for so large a pepper. The productiveness may be increased by pinching off the first or "king blossoms." The fruit grows 4 to 5 inches broad on top and of equal length, and quite uniform in size; the flesh is unusually thick, mild flavor and makes a very fine salad sliced and served like tomatoes. The color is green turning to glossy scarlet when ripe.

Pkt., 15c; ½ oz., 50c; oz., 90c; ¼ lb., \$2.75.

HARRIS' EARLY GIANT

Pkt., 15c; ½ oz., 50c; oz., 90c; ¼ lb., \$2.75.

Hungarian. A long, slender type of hot pepper much prized for canning. It is 1½ inches in diameter at the base and tapers to a point. The fruits are often 10 inches long, and are a pale green turning to a rich red at maturity.

Pkt., 25c; ½ oz., 90c; oz., \$1.60; ¼ lb., \$5.50.

World Beater. A large sort, a cross between Chinese Giant and Ruby King, having the longer shape and earliness of the latter with the size of the former. Fruits 5 inches long by 3½ in diameter; flesh thick and mild; very productive and a good shipper.

Pkt., 10c; oz., 60c; ¼ lb., \$1.75.

RUBY KING. One of the most popular varieties, growing 4½ to 6 inches long, 3½ to 4 inches thick. The peppers are a bright ruby-red and are among the best sorts for pickles. Quite sharp in flavor; the flesh is thick, crisp and tender.

Pkt., 10c; oz., 50c; ¼ lb., \$1.60.

BULL NOSE, Hot. A pungent very early pepper. Pkt., 10c; oz., 50c; ¼ lb., \$1.50.

CAYENNE. Long, red and very hot. Pkt., 10c; oz., 50c; ¼ lb., \$1.50.

Wrinkled Peas, Dwarf

LITTLE MARVEL

HORSFORD'S MARKET GARDEN. Our strain of this sort is very popular with growers. It is later than "Advancer," grows taller, requires no brushing, and is a heavier producer. The pods are well filled with peas of fine quality. Pkt., 10c; lb., 35c; 2 lbs., 65c; 10 lbs., \$2.25.

JUNO OR DWARF CHAMPION. Main crop dwarf wrinkled pea, of hardy, vigorous and prolific growth. Long pods, each contain 7 to 10 peas of very best quality. Pkt., 10c; lb., 40c; 2 lbs., 70c; 10 lbs., \$2.50.

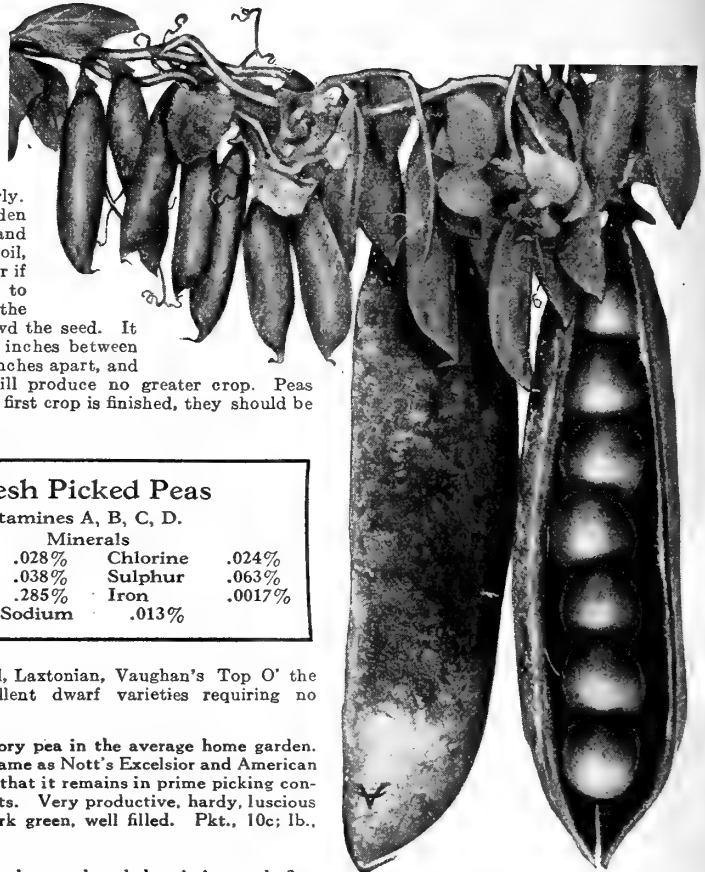

DWARF TELEPHONE OR DAISY. A mid-season maturing sort of merit; vines are dwarf and bear large, bright green pods, each contains 7 to 9 peas of finest quality. This is a splendid variety, of which we offer a high-class re-selected stock. Pkt., 10c; lb., 45c; 2 lbs., 85c; 10 lbs., \$2.75.

VAUGHAN'S DWARF DEFIANCE. Pea growers cannot afford to overlook this splendid main crop success; it is without a superior, a grand second early. The vines are vigorous, the pods dark green and immense in size and fullness, like "Telephone." The handsome pods are filled with peas that are sweet and rich flavored. Pkt., 10c; lb., 40c; 2 lbs., 70c; 10 lbs., \$2.50.

IMPROVED STRATAGEM. Long dark green pods, produced on vines 2 feet high, of strong, vigorous growth; matures mid-season; pods are filled with peas of immense size, and delicious sweetness and flavor. Pkt., 10c; lb., 40c; 2 lbs., 70c; 10 lbs., \$2.50.

SUTTON'S EXCELSIOR IMPROVED. Is a very fine first early dwarf pea, regarded by some as the best of the wrinkled sorts. It is very hardy; can be planted early; vines are 18 inches high, very prolific; pods are almost square at lower end, larger and broader than the usual dwarf pea, and dark green color. Pkt., 10c; lb., 45c; 2 lbs., 85c; 10 lbs., \$2.75.

PEAS are a cool-weather crop. They should be sown when the ground is ready to work, without delay. The smooth seeded sorts will stand cold and freezing weather without rotting in the ground, but they are not so tender or sweet on the table as the wrinkled kinds, which are more risky in the wet soil, but still worth taking a chance to get early. Dwarf peas are best suited for the garden where space is scarce. They are early and bear well. It is important to have rich soil, somewhat light, and to give plenty of water if a full crop is to be produced. It will pay to use a balanced commercial fertilizer in the row when the seeds are sown. Do not crowd the seed. It is better to sow in single rows, with two inches between the seeds, or in double rows, the rows six inches apart, and seeds two inches apart. Closer sowing will produce no greater crop. Peas must be cultivated faithfully and when the first crop is finished, they should be pulled up for they will bear no more.

For the Home Garden—Little Marvel, Laxtonian, Vaughan's Top O' the Morn and American Wonder are excellent dwarf varieties requiring no support and yielding well.

Little Marvel. The most satisfactory pea in the average home garden. In season it is the same as Nott's Excelsior and American Wonder. The big point in its favor is that it remains in prime picking condition a week longer than the older sorts. Very productive, hardy, luscious and sugary. Vines 18 inches, pod dark green, well filled. Pkt., 10c; lb., 45c; 2 lbs., 85c; 10 lbs., \$2.75.

Nott's Excelsior. Almost as early as the round seeded varieties—only 2 to 3 days later—but far superior to them in quality. Vines about 15 inches high, pods about 3 inches long, each containing 5 to 7 peas of good size, tender and delicious. The vines are vigorous and very prolific. It is easily grown, requires no support and is desirable for the home garden. Pkt., 10c; lb., 40c; 2 lbs., 70c; 10 lbs., \$2.50.

Laxton's Progress. The earliest and by far the best of the large-podded, large-fruited wrinkled peas. Of all the varieties producing peas of equal quality, this is the heaviest yielding. It bears long pods, averaging one more pea to the pod than Blue Bantam, Hundredfold, Pioneer and Laxtonian. It is an improvement upon Laxtonian, which has hitherto been the finest of the dwarfs for table quality. Pkt., 10c; ½ lb., 30c; lb., 50c; 2 lbs., 90c; 10 lbs., \$3.00.

Laxtonian. The New Dwarf Gradus. This is another of Vaughan's Specials that has proved itself a winner for gardeners. It is extra early, tall, has large pods like "Telephone," which are filled with the finest flavored peas. Laxtonian is in season a few days later than the first earlies. It is really a Giant Podded Early Dwarf in a class almost by itself, for size, appearance and productiveness. Pkt., 10c; lb., 45c; 2 lbs., 85c; 10 lbs., \$2.75.

American Wonder. Is an extra early dwarf wrinkled pea, of standard quality. The vines are dwarfer than Nott's Excelsior, being only 10 to 12 inches high. Pods are firm and well filled with peas of splendid quality. Pkt., 10c; lb., 40c; 2 lbs., 70c; 10 lbs., \$2.50.

Vaughan's "Top O' the Morn." This is one of the best of the new Dwarf Giant Podded Peas. The vines are of a deep green color, growing 18 inches in height. The pods are blunt-ended, like Nott's Excelsior or Little Marvel, and are produced in clusters all up the haulm, a week later than Laxtonian. Pkt., 10c; lb., 45c; 2 lbs., 85c; 10 lbs., \$2.75.

Extra Early Premium Gem or Little Gem. An early dwarfed wrinkled pea, not so upright in habit as "American Wonder," but the vines, which grow 16 to 18 inches high, require no support, and yield great quantities of pods, 3 inches long, filled with peas of fine quality. Pkt., 10c; lb., 40c; 2 lbs., 70c; 10 lbs., \$2.50.

Please send me one of your catalogues. I had the best luck I ever had with celery last year. I bought the celery seed from you, and some of the celery weighed as high as 34 pounds to the dozen stalks. So come on with your catalogue as I am not going to take any more chances.

Every Gardener Should Know

That Peas, Beans and Sweet Peas belong to the Legume family—plants that bear their seed in a pod—like clover and alfalfa. All legumes form a partnership at the roots with certain kinds of helpful bacteria called Legume Germs that are able to pump or draw nitrogen from the air and give it to the plant. They form on the roots in colonies looking like lumps, called nodules, which are really nitrogen storehouses.

Without these germs, legumes would rob the soil for nourishment and have a sickly growth, for few soils contain a natural supply. It is therefore necessary to "inoculate"—apply these nitrogen-gathering germs directly to the seed. All agricultural authorities advise inoculation of legumes.

Garden Size, 25c

or Tall, Are Sweetest

A HEAVIER yield without sacrificing quality is obtained from the varieties of peas which require some support. The early varieties listed on this page grow to three feet high and should be given support of chicken wire, or brush between companion rows. The smooth podded sorts may be sown first, and if not allowed to mature too much will be found to be of the finest table quality.

For the Home Garden—Maud S. and Alaska for the smooth-seeded sorts and Gradus and Thomas Laxton of the wrinkled type are excellent varieties.

Gradus—Vaughan's Re-selected Stock. Gradus is the greatest of the wrinkled peas; it is large, early, and in flavor equal to the best wrinkled kinds. It is tender and should be planted in the warmest spot in the garden: it matures fully two or three days later than the hard round extra early sorts. Vines 30 inches, pods 4 inches long, beautiful green color, with 7 to 10 or more rich, tender peas in each.

Pkt., 10c; lb., 45c; 2 lbs., 85c; 10 lbs., \$2.75.

Vaughan's Select Extra Early. (First and Best) (Maud S.) Vines are 20 to 26 inches high, pods $2\frac{1}{2}$ to 3 inches long, each having 5 to 7 peas. The delicious sweetness, rich flavor and tenderness of Vaughan's Maud S. are the qualities for which our strain is known by growers and consumers. Seed white, round and smooth; crop ripens evenly and extra early.

Pkt., 10c; lb., 35c; 2 lbs., 65c; 10 lbs., \$2.25.

Thomas Laxton. This is a selection of Gradus. The season is identical with Gradus, but the pods are square at the end and deeper green. Vines are 3 to $3\frac{1}{2}$ feet high. The main qualities of Gradus are reproduced in this strain and it can be recommended with confidence for home garden. A better yielder than Gradus.

Pkt., 10c; lb., 45c; 2 lbs., 85c; 10 lbs., \$2.75.

Alaska—Called Earliest of All. In season same as "Maud S." Alaska and "Maud S." are in all but color the same; Alaska seed is bluish in color; it is standard for market and canning. Vaughan's strain is true, always reliable and gives best results. Round seed peas do not rot in cold ground so easily as wrinkled peas do.

Pkt., 10c; lb., 40c; 2 lbs., 70c; 10 lbs., \$2.25.

THE AMEER. Very popular with truckers in certain sections of the South. The peas are smooth and therefore can be planted early without rotting. The season is early. 2 or 3 days later than Alaska, and the pods are almost twice as large.

Pkt., 10c; lb., 40c; 2 lbs., 70c; 10 lbs., \$2.25.

SURPRISE—The Earliest Pea of Quality. In season two days later than Alaska. Being a wrinkled pea, it cannot be planted in soil so cold as smooth peas, like Alaska or Maud S. because not so hardy. Vines grow 24 inches high, require no brushing; the pods are of good size.

Pkt., 10c; lb., 40c; 2 lbs., 70c; 10 lbs., \$2.50.

I had ordered some things from you this spring and I sure was pleased with your promptness and also your excellent quality. Everything turned out O. K.

Tall Peas Are Latest

THE gardener who takes pride in his peas and whose space is unlimited will find the tall-growing sorts unequaled for length of season, heavy yielding and high quality. Support should be given, and they should be planted with plenty of room. Liberal fertilizing will be well repaid.

For the Home Garden—Improved Telephone and "Quite Content" will give peas of a size and quality sure to win the envy of your neighbors and the prizes at the garden show.

Vaughan's Improved Telephone. Of the tall-growing varieties of late peas. "Vaughan's Improved Telephone" is regarded by experienced and successful growers as the best sort for general purposes. Uniformly large pods, 5 inches or more long, filled with 8 to 9 delicious peas. Grows 4 feet high; is a main crop variety, and a heavy yielder.

Pkt., 10c; lb., 45c; 2 lbs., 85c; 10 lbs., \$2.75.

Admiral Beatty. A very desirable mid-season or early main crop variety. Vines are about four feet high, dark green in color, and produce abundantly large pods well filled with eight to ten peas.

Pkt., 10c; lb., 45c; 2 lbs., 85c; 10 lbs., \$2.75.

Champion of England. This is a late season tall pea. The vines grow about 5 feet high, are very vigorous and productive.

Parsley for Garnish or Flavor

VAUGHAN'S
XXX
PARSLEY

Soup Plants

Fresh vegetables for soup stocks are one of the luxuries of the home garden. Besides Parsley, Parsnip and Carrots, Leek—the Scotch standby—should be tried. The tops of the Celery furnish a fine celery flavor as a by-product to the roots.

PARSLEY is one of the vegetables a housewife values most highly in the garden. It is always in demand for garnishing dishes, and often valuable for flavoring soups and stews. It should be sown early because it is very slow to germinate; and it is best to use radish seed mixed with the parsley seed to mark the rows. The parsley will not appear until the radishes are ready to harvest.

Rich and mellow soil is desirable for best results with parsley. When the plants are well up thin to 8 to 12 inches in the row. When the plants of the curled varieties are about three inches high, cut off all the leaves. New growth will start which will be brighter and better curled. Similar treatment may be given from time to time.

The rooted parsley provides excellent flavoring for soups and stews, and also leaves which may be used for garnishing though not so finely curled.

Vaughan's XXX Parsley. "The most beautiful Parsley that ever garnished a dish." An enthusiastic chef gave voice to the above expression as he garnished some dishes of fine table delicacies with sprays of Vaughan's beautiful XXX Parsley. The daintily curled leaves of delicate green, appetizingly fresh and beautiful, add zest and richness to substantial or delicate viands. It is pretty in growth as well as beautiful as a garnish for table dishes. It grows very dwarf in the garden—many of our customers plant it as a border for which it is very pretty; it also is valuable in the hotbed, greenhouse, or in pots in winter, taking small space. Vaughan's XXX Parsley was chosen after many trials and a careful inspection trip through Europe where the seed is grown. It is the best and handsomest colored parsley yet introduced.

Pkt., 10c; oz., 25c; ¼ lb., 60c; lb., \$1.75.

Vaughan's Champion Moss Curled. In England this is a prize winning variety.

Robust, compact plants are quickly produced, the leaves are so crumpled and curled as to have the appearance of curled moss, with rich, green color; it is quite hardy, slow to run to seed and may be grown in pots or window boxes.

For garnishing dishes and for flavoring purposes it is entirely satisfactory.

Pkt., 10c; oz., 25c; ¼ lb., 50c; lb., \$1.50.

FERN LEAVED. Leaves so nicely and delicately cut as to resemble the fronds of a fern. Good green color and nice flavor. Pkt., 10c; oz., 25c; ¼ lb., 50c; lb., \$1.50.

PLAIN or ITALIAN. The leaves are not curled. However, the flavor is excellent and plant is very hardy. Pkt., 10c; oz., 20c; ¼ lb., 40c; lb., \$1.25.

HAMBURG ROOTED or GERMAN. The root resembles a small parsnip and is the edible part of this sort; used for flavoring soups. Our strain is of exceptional quality. Pkt., 10c; oz., 25c; ¼ lb., 60c; lb., \$1.75.

DOUBLE CURLED. A very fine dwarf, handsome green, curled variety. Pkt., 10c; oz., 25c; ¼ lb., 50c; lb., \$1.50.

Vaughan's Specials

We use this sign to indicate sorts which we grow ourselves or stocks which we control absolutely.
THERE ARE NONE BETTER

Parsnips Last all Winter

PARSNIPS should be grown in every home garden not only because of their delicious flavor, but because they may be harvested at times when the garden has little else to offer. Let them remain in the ground over winter, and dig them during a thaw or when the spring thaw comes—they will be as sweet and tender as ever. A freeze is required to sweeten them. For the best results deep soil is needed, and fresh manure should not be used as it will cause the roots to divide.

Vaughan's Marrowfat Parsnips. The accompanying illustration tells the story of uniform good size, fine shape, clean, smooth skin, and general handsome appearance, which distinguishes this high-class variety. In richness of flavor it is unequalled. For exhibition purposes it is a winner. Pkt., 10c; oz., 20c; ¼ lb., 45c.

Magnum Bonum. A greatly improved strain of "Hollow Crown" Parsnip. As a money-maker for market men we recommend it. It is a heavy cropper, the roots are smooth, but not so long, though somewhat thicker than the original, which makes them easier to harvest. Pkt., 10c; oz., 15c; ¼ lb., 40c.

Hollow Crown, Long Smooth. (Abbott's Improved.) Smooth, large, tender and sugary; one of the best. Our strain is a good selection. Pkt., 10c; oz., 15c; ¼ lb., 35c.

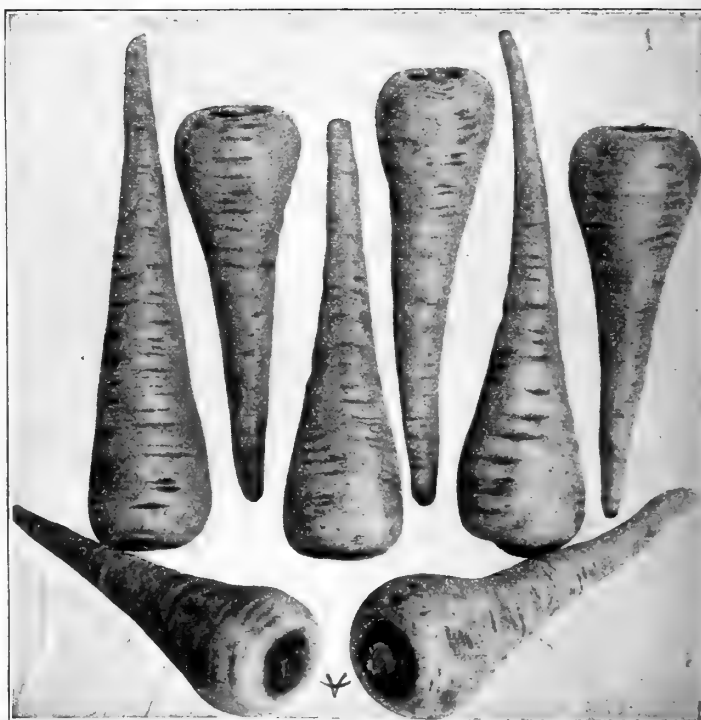

Improved Guernsey. An improvement over the parent, "Hollow Crown," than which it is much larger in diameter, but not so long. The roots are more easily gathered. This sort gives general satisfaction. Of excellent sugary flavor. Pkt., 10c; oz., 15c; ¼ lb., 35c.

Vaughan's New Intermediate. This new sort does not require soil so deep for its cultivation as the older sorts. It is quite equal in quality to the older varieties although the roots are only one-half to two-thirds as long under ordinary conditions. On heavy or clay soil Intermediate is especially good. Roots smooth and handsome and easily harvested. Pkt., 10c; oz., 15c; ¼ lb., 40c.

RADISHES supply the first home garden harvest in the spring, and winter radishes may be enjoyed as late as New Year. Quick growth is the secret of success. A rich, light soil is required. The globe and olive varieties grow faster than the long type, and turn pithy sooner; so they must be harvested promptly and will not enjoy hot weather. The long types grow more slowly and are slower to turn pithy, so they endure heat better. Winter radishes should be sown in June or later and allowed to develop in the cool, moist fall weather.

Early Scarlet Globe Forcing (F). Vaughan's Glasshouse greenhouse forcing, and outdoor planting. Very early, crisp, mild and tender; rich, bright, scarlet in color, of uniform globe-shape. It is ready for the table in 25 days. For the home, plant every 10 days until into June; again end of August.

SPINACH delights in cool moist weather. Seed should be sown at the earliest possible moment in spring in rows one foot apart and thinned to six inches in the row. It matures in 45 to 50 days and quickly runs to seed in warm weather. The Antvorskov variety, listed below, is most free from this tendency. Home gardeners have generally adopted Swiss Chard and New Zealand Spinach as a greens crop, as both may be cut many times and will produce a continuous crop until freezing weather in the fall. A fall crop of spinach may be sown in late July or August and will find the cool, moist autumn weather favorable for growth. The value of spinach in the diet has been scientifically established by the vitamin investigation.

Long Standing Spinach King of Denmark. (Antvorskov)

In our trials this variety has been slower to run to seed than any other sort. Antvorskov forms quite large tufts (or rosettes) compact and low. The numerous leaves are extra large, broad and rounded exceedingly bushy, slightly crumpled and of a glossy dark green color.

Pkt., 10c; oz., 15c; ¼ lb., 25c; lb., 75c.

Princess Juliana. This is a new type of "Long Season" Spinach. The leaves are of good size, very dark green, well crumpled and thick. The first plants of Spinach to bolt to seed are the male plants. (Spinach is generally dioecious; i. e., there are male and female plants.) This first bolting seed has been eliminated in this new race by the production of hermaphrodite plants, these plants seeding much later than male plants.

Pkt., 10c; oz., 15c; ¼ lb., 25c; lb., 75c.

Virginia Savoy Yellows or Mosaic Disease Resistant.

A variety originated by the Virginia Truck Experiment Station, a cross between Resistant Bloomsdale Savoy and Manchurian. This is a cool weather variety, for winter in the South and fall in the North. The leaves have markedly the Savoy characteristics.

Pkt., 10c; oz., 15c; ¼ lb., 25c; lb., 75c.

Vaughan's Triumph Spinach. Withstands hot weather longer than other sorts; it thereby increases the length of the season a month. It does not wilt or run to seed so quickly as other sorts. Its habit of growth is prostrate, rather than upright; the leaves are thick warty, and fine and tender when cooked.

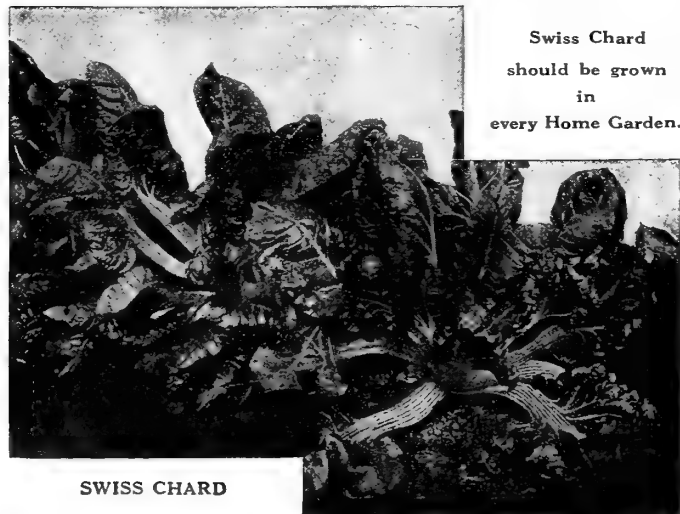

Pkt., 10c; oz., 15c; ¼ lb., 25c; lb., 60c.

New Zealand Spinach (Tetragonia Expansa). While this is not a member of the Spinach family proper, it furnishes an abundance of delightful "greens" throughout the summer and right up to cold weather. Both the leaves and the stalks of the plant are very fleshy and extremely brittle and of the finest quality when cooked. Do not sow seed until May 1st or when the soil is fairly warm. Plant in rows 3 feet apart and thin the plants to stand 2 feet apart in the rows. Soak the seed before sowing.

Pkt., 10c; oz., 15c; ¼ lb., 40c; lb., \$1.00.

SWISS CHARD

NEW LONG STANDING SPINACH "ANTVORSKOV"

Vaughan's Special. See Novelty Page. Pkt., 10c; oz., 20c; ¼ lb., 40c; lb., \$1.00.

Bloomsdale Long Standing. Latest of the Long Standing Spinach introductions. Improvement was accomplished through the selection of hermaphrodite plants (bisexual), which run to seed much more slowly than the unisexual. This variety is of better quality than the Antvorskov (King of Denmark) having larger and Savoy type leaves. Pkt., 10c; oz., 15c; ¼ lb., 25c; lb., 75c.

BLOOMSDALE OR NORFOLK SAVOY-LEAVED. Is a very hardy sort; the leaves are very thick and blistered, making it a fine shipper; it is a good standard size, and a great favorite with Southern truckers. Pkt., 10c; oz., 15c; ¼ lb., 20c; lb., 50c.

EXTRA LARGE ROUND LEAF. Large crumpled leaves. This is one of the best for early use, and if sown again in August is hardy enough for late autumn use.

LONG STANDING. Of compact growth with thick deep green leaves. Slow to seed.

PRICKLY-SEEDED. Very hardy; sow in fall; for late use.

MONSTROUS-LEAVED VIROFLAY. Quick, strong growth. N. Y. favorite.

Price of the above, except where noted. Pkt., 10c; oz., 15c; ¼ lb., 20c; lb., 50c.

Vaughan's Giant Fillbasket. The very largest Early Spinach, the result of careful re-selection. In Europe it holds first place in public favor. Our customers here have had great success with it and are planting it more extensively each year. Its broad, thick, dark green leaves are very crisp and tender and of delicately delicious flavor.

Pkt., 10c; oz., 15c; ¼ lb., 25c; lb., 60c.

Victoria Spinach. Remains in prime condition two to three weeks after other varieties, excepting "Vaughan's Triumph," have run to seed. It is of true Savoy type, dense foliage, broad, dark green leaves of best quality; a great heat resister.

Pkt., 10c; oz., 15c; ¼ lb., 20c; lb., 50c.

Garden Sorrel

Is boiled and served like spinach, also delicious for soups. As the hot sun tends to increase its acidity, a Northern exposure is advisable. It should be sown in drills 18 inches apart. It is hardy, but the roots should be divided every four years. Pkt., 10c; oz., 25c; ¼ lb., 60c; lb., \$2.00.

Swiss Chard an All Season Crop of "Greens"

Swiss Chard — "Cut and Come Again." This vegetable gives maximum returns for little care and space; it yields a constant crop from July to winter. If your garden space is limited, Swiss Chard must have a place, for in proportion to ground occupied, Swiss Chard produces more food for the table than almost any other vegetable. The leaves are used for greens the same as spinach or beet tops. Sow early in spring, in rows 16 inches apart, and thin out to 6 inches in the rows. It can be used all Summer when spinach is not available. The leaves grow very large, with broad, flat, pure white stems, and mid-ribs, which may be cooked like asparagus, or made into very good pickles. As it grows, thin out for use and keep clear of weeds. Good cultivation increases its tenderness. Gardeners use Swiss Chard as a catch crop, giving quick results on temporarily idle spaces. The investment is small and returns large. Our packages contain recipes for cooking. Pkt., 5c; oz., 15c; ¼ lb., 30c; lb., \$1.00.

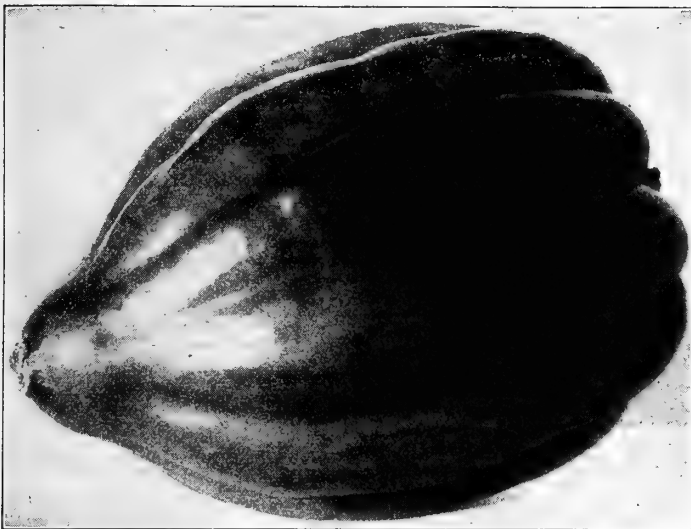

LOCULUS SWISS CHARD. A new Moss Curled sort. Very large leaves. The mid-ribs are very broad and form a good substitute for asparagus during the summer months. Pkt., 10c; oz., 20c; ¼ lb., 45c; lb., \$1.25.

COOPER'S MAMMOTH. This new mammoth sort is a medium green-

colored variety of immense size—large chard or mid-rib of excellent quality and flavor. Pkt., 10c; oz., 20c; ¼ lb., 50c; lb., \$1.50.

LYON SWISS CHARD. A new variety, selected especially for its broad mid-ribs and stems. Pkt., 10c; oz., 20c; ¼ lb., 45c; lb., \$1.25.

Newer Squashes and Marrows

NEW SQUASH "TABLE QUEEN"

Acorn, Table Queen, or "Des Moines." We can truly say that the height of Squash quality is still unknown to one who has not eaten half a Table Queen, baked and buttered. In size Table Queen equals a fair sized husked coconut, and a half, baked, serves one person amply. The shell is unusually thin and it does not require over twenty minutes for baking or boiling. The color is dark green changing to bright golden after picking and storing. The meat is dry and mealy. It yields enormously—a few hills furnishing an ample supply for a good sized family. (*Cucurbita Pepo.*) Pkt., 10c; oz., 20c; ¼ lb., 60c; lb., \$2.00.

New Squash "Kitchenette" (Hubbard). A small edition of the Hubbard Squash developed by inbreeding and introduced by the Minnesota Experiment Station. It was named "Kitchenette" because it is the smallest Hubbard. The squash average about 5 pounds. They are a glossy dark green, fully equal to any Hubbard for quality and keep as well in storage. In season they are two weeks earlier than the Hubbards. (*Cucurbita Maxima.*) Pkt., 10c; oz., 25c; ¼ lb., 60c; lb., \$2.00.

Golden Hubbard. Fruits are of the same shape as Green Hubbard, and warted, but average one-half to one-third smaller in size. The skin is deep orange yellow and very attractive. Flesh is deep golden yellow, fine grained and delicious. (*Cucurbita Maxima.*) Pkt., 10c; oz., 20c; ¼ lb., 45c; lb., \$1.40.

Original Hubbard Squash. Not as large as Vaughan's original shape and quality it is similar. The fruit has dark green skin, the flesh is bright orange color, fine grained, dry and thick. (*Cucurbita Maxima.*) Pkt., 10c; oz., 20c; ¼ lb., 45c; lb., \$1.40.

Vaughan's Chicago Warted Hubbard. Vaughan's Chicago Warted Hubbard Squash has been bred to meet the requirements of a high-class article of this kind; fruits are of large size, rough skin, dark green in color, flesh is bright orange, fine grained, rich and dry. EARLY WHITE BUSH. Very early. (*Cucurbita Pepo.*) Pkt., 10c; oz., 15c; ¼ lb., 45c; lb., \$1.25.

BLUE HUBBARD. Similar to original Hubbard in shape and size, quality superior, an excellent winter keeper, having a blue gray shell. Pkt., 10c; oz., 25c; ¼ lb., 60c; lb., \$1.75.

EARLY YELLOW BUSH. A true bush, though of an earlier and smaller strain than the Mammoth. (*Cucurbita Pepo.*) Pkt., 10c; oz., 15c; ¼ lb., 45c; lb., \$1.25.

CHICAGO ORANGE MARROW. Large as Hubbard, good quality, 10 days earlier than others, keeps as long. Season—Sept. to Jan. (*Cucurbita Maxima.*) Pkt., 10c; oz., 15c; ¼ lb., 45c; lb., \$1.25.

SQUASH are growing in popularity with home gardeners. They must be sown in warm, rich soil in hills 8 to 10 feet apart for the vine varieties and 3 to 5 feet for the bush sorts. The squash borer is the principal enemy, and the best protection against it is to cover the vine with soil at several joints. It will take root where covered and limit the damage done by the borer. Vegetable Marrows are considered by many to be superior in flavor to egg plant if sliced when half grown and fried. All squashes may be baked and eaten with butter, in which form they oftentimes are relished by persons who dislike them when mashed and boiled.

Vegetables popularly known as pumpkins and squashes are all members of the family *Cucurbita*; and it has long been known that their popular classification did not agree with their botanical relationship. Many so-called pumpkins belong to the species to which most so-called squashes belong; while numerous so-called squashes, including the marrows, are botanically members of the species in which most pumpkins are included.

Recently there has been agitation in favor of reclassifying these vegetables in seed catalogs, on the basis of their botanical status, including as pumpkins all members of the species *Cucurbita Pepo* and *C. Moschata* while classifying as squashes, the species *Cucurbita Maxima* only.

Since the botanical classification has no significance for the home gardener, or housewife, and it could only create confusion among seed users to list, for example, the delicious squashes Table Queen, and Sweet Potato, as pumpkins, we have decided to continue the classification to which our customers are accustomed. But following the description of each variety we give in parentheses, the botanical classification, as *Cucurbita Pepo*, *C. Moschata*, or *C. Maxima*, as the case may be.

NEW SQUASH SWEET POTATO

"Sweet Potato." A valuable addition to the list of small squashes, is of fine flavor, becoming a popular feature of fall and winter menus. It is an improved *Delicata*, as sweet as Table Queen. The fruit averages 6 to 8 inches long and they are thick fleshed. When baked and served with melted butter it is a table delicacy of the first order. (*Cucurbita Pepo.*) Pkt., 15c; oz., 35c; ¼ lb., 75c; lb., \$2.50.

Banana Squash. A very fine quality squash, free from stringiness, about 18 inches long, tapering to a point at either end. Grayish green color. Prolific. (*Cucurbita Maxima.*) Pkt., 15c; oz., 25c; ¼ lb., 75c; lb., \$2.50.

Vaughan's Giant Summer Crookneck. Our strain of this popular squash produces fruit nearly double the size of the old standard "Crookneck." The flesh is a rich golden yellow, the quality and flavor of which is the very best. (*Cucurbita Pepo.*) Pkt., 10c; oz., 20c; ¼ lb., 45c; lb., \$1.50.

Vegetable Marrow. This is a most important vegetable in the English market, but little known in this country. The fruit is generally eaten when less than half grown, as the flesh is then very tender and marrowy. Our packages contain cultural directions and recipes for cooking. (*Cucurbita Pepo.*) Pkt., 10c; oz., 20c; ¼ lb., 50c; lb., \$1.65.

Cocozelle (Italian Vegetable Marrow). A bush summer variety. Fruits oblong, ribbed, 12-16 inches in length. Color dark green marbled with yellow and dark green stripes. Very fine flavor. (*Cucurbita Pepo.*) Pkt., 10c; oz., 20c; ¼ lb., 60c; lb., \$2.00.

Zucca Pergola. A vegetable marrow which grows 3 feet in length and 3 inches in diameter. Pale green in color. Used by Italians for slicing and frying like egg plant or baking, stuffed with meats. (*Cucurbita Pepo.*) Pkt., 20c; oz., 50c; ¼ lb., \$1.50.

New Italian Marrow. (*Cucurbita Pepo.*) See Novelty Page. Pkt., 10c; oz., 35c; ¼ lb., \$1.00.

The Delicious—For Quality. A squash of exceptional merit for table use. A fall and winter variety, but is fine in all seasons, though its best quality is not attained until winter. The fruit varies in shape and size, weight ranging from 5 to 10 pounds each. The rind is very thin, uniformly green, and the flesh is very thick and dark orange color. (*Cucurbita Maxima.*) Pkt., 10c; oz., 20c; ¼ lb., 50c; lb., \$1.60.

Mammoth White Bush. Is an improved selection of the old "Early White Bush," the highly favored early summer squash. The newer sort is much larger and deeper, has fewer scallops, which saves waste, and is a heavier producer. Our strain is very select. (*Cucurbita Pepo.*) Pkt., 10c; oz., 20c; ¼ lb., 50c; lb., \$1.50.

Avon Early Tomato. This is a scarlet-fruited variety of the very earliest class. It bears as quickly as Earliana, produces fruits of good size, round or slightly flattened, smooth and free from cracks and of fine quality. Pkt., 10c; ½ oz., 30c; oz., 50c; ¼ lb., \$1.50; lb., \$5.00.

Hudson Valley Maid. This new potato-leaved variety, in trial, showed up remarkably well during a dry, off season, the potato-leaved sorts seeming to possess a hardiness that few of the ordinary leaved sorts have. It is second in season, of good size, smooth and bright red. Pkt., 10c; ½ oz., 30c; oz., 50c; ¼ lb., \$1.60.

Golden Ponderosa. A Yellow Gem. This is a yellow Ponderosa equal in size to that magnificent variety. Sliced and served with the Purple Ponderosa, it makes a highly decorative and appetizing salad. Dwarf Champion. A good sort for the home garden. Owing to its dwarf habit and upright tree-like growth it is a great favorite. It is of medium size, very smooth, purplish pink, symmetrical, flesh very solid. The vine is strong and stiff, requiring little support. Pkt., 10c; ½ oz., 25c; oz., 45c; ¼ lb., \$1.30; lb., \$4.50.

TOMATOES are an ideal home garden crop, thriving in a clay soil none too fertile and yielding heavily in small space. They should be started indoors and those unable to do this should purchase plants. The plants may be set in the garden when danger of frost is over. It is important to give them a quick start after transplanting by frequent watering and fertilizing. They should be sprayed with bordeaux mixture to prevent disease, and with arsenate of lead to keep off the tomato worm. Hot sun is needed to ripen tomatoes and plenty of water to keep them growing. If trained to stakes or trellises they will ripen sooner, though satisfactory crops are produced by allowing the vines to lie on the ground.

For the Home Garden—Earliana for the first crop, John Baer second early, and Stone for the main crop are the most popular and are of excellent quality. For those who prefer a large size fruit, plant Ponderosa or Crimson Cushion.

Vaughan's Select Earliana. Very popular Early Red. Vaughan's Earliana is the earliest large, smooth bright red tomato. In season it ripens with the earliest, and our strain shows few, if any, of the rough fruits found in large numbers in other early sorts, and among many strains of Earliana. This variety is compact in growth, with stout jointed branches; the vines yield well and the fruit is solid and of fine quality. Pkt., 10c; ½ oz., 25c; oz., 40c; ¼ lb., \$1.25; lb., \$4.00.

June Pink—The Best Extra Early Pink. In many, perhaps the greater number of markets, a pink early tomato is most desired. This is the earliest of the pink varieties, and is similar in habit to the famous Earliana. Pkt., 10c; ½ oz., 25c; oz., 45c; ¼ lb., \$1.50; lb., \$5.50.

Vaughan's American Beauty. See Novelty Page. Pkt., 25c; ½ oz., 60c; oz., \$1.00.

New Globe Tomato. This new Globe or Ball-Shaped tomato is ideal for the home garden; it is excellent for slicing. The rich, juicy, tomato flavor gives a certain zest and joy in the eating. The fruits ripen with the second earliest. They yield a heavy crop and continue to bear until frost. The skin is a smooth, purplish pink; the flesh is firm and it has few seeds. Pkt., 10c; ½ oz., 30c; oz., 50c; ¼ lb., \$1.60; lb., \$5.50.

Disease Resistant Sorts

NORTON or WILT RESISTANT STONE. Introduced by the United States Department of Agriculture. It is the result of work accomplished by Dr. Prichard to produce a variety resistant to Fusarium Wilt. It is a good variety in disease free soil resembling closely the Improved Stone, perhaps a little later than Stone. It is very prolific. The fruit is smooth and bright red. Pkt., 10c; ½ oz., 30c; oz., 50c; ¼ lb., \$1.75.

BREAK O'DAY. See Novelty Page. Pkt., 50c; ½ oz., \$1.00; oz., \$2.00; ¼ lb., \$7.50.

Colors and Maturing Seasons

Dwarf Stone—The Largest Dwarf Tomato. This is the largest Dwarf tomato; it resembles "Dwarf Champion," but is of stronger growth and more erect. In shape and size it is similar to "Improved New Stone." The fruit is red, and specimens weighing $\frac{3}{4}$ pound are not uncommon. Dwarf Stone is almost as early as "Dwarf Champion," and the fruit is the size of the last named sort. Fruit ripens evenly, is solid, free from cracks and of excellent quality. Amateurs find Dwarf Stone a splendid sort, because of its dwarf habit and robust growth.

Pkt., 10c; $\frac{1}{2}$ oz., 25c; oz., 45c; $\frac{1}{4}$ lb., \$1.40; lb., \$5.00.

Ponderosa—The Giant Tomato. Of the large fruited varieties, this one is a gem. The vines are strong in growth, and when planted in good soil and pruned to a single stem, the fruit reaches one pound in weight. Tomatoes grow in beautiful clusters. The fruit is mostly oblong in shape, usually ribbed, is deep purple color, has solid flesh of sweet flavor, and small seed cells.

Pkt., 10c; $\frac{1}{2}$ oz., 30c; oz., 50c; $\frac{1}{4}$ lb., \$1.75; lb., \$6.00.

Table Turnips

TURNIPS are cool weather plants and thrive best in spring and fall. For early use seed should be sown as soon as the ground can be prepared and will give roots large enough for the table in six to ten weeks. For the fall crop seed should be sown June to August and the plants will grow until freezing weather, when they should be harvested and stored. Rutabagas after a touch of frost are a delightful addition to the winter diet. To avoid maggots, it is best to sow turnips on different soil each year.

A loose and fertile soil is needed to mature early turnips rapidly, and avoid a bitterness which develops when growth is checked. The plants should be thinned to stand three inches apart, and then the half grown roots should be harvested alternately.

For the Home Garden—Any of the table turnips and rutabagas listed on this page will be found satisfactory.

Vaughan's Annual Flower Seeds

Surprise Garden Mixture

5848 Our Surprise Garden of Annuals has created a place for itself at the beginning of our colored pages—Yearly our friends find something new and fascinating in it which they include separately in their order the following year. We buy for this mixture surplus stock seed from our growers besides named varieties and separate colors of many flowers which are attractive and easily grown but little known. Indeed there are so many flowers produced from early until late in endless succession it is a continual surprise to the gardener.

Plant freely but not too thickly in rows in the vegetable or picking

garden. One of our customers wrote us from Detroit on August 5—"I am very happy to inform you of the splendid success of the order of seeds I sent you. All have done well but in my opinion the finest value of any seed house in the country is contained in your Surprise Collection. We have at our summer cottage from this package one thirty foot strip and three fifteen foot strips of the nicest flowers one could imagine and have cut bouquets daily since July first. The many unusual flowers contained in the package makes the collection a real delight. This collection should be in every garden no matter how large or small." Oz., 25c; ¼ lb., 75c; lb., \$2.60.

Vaughan's Asters

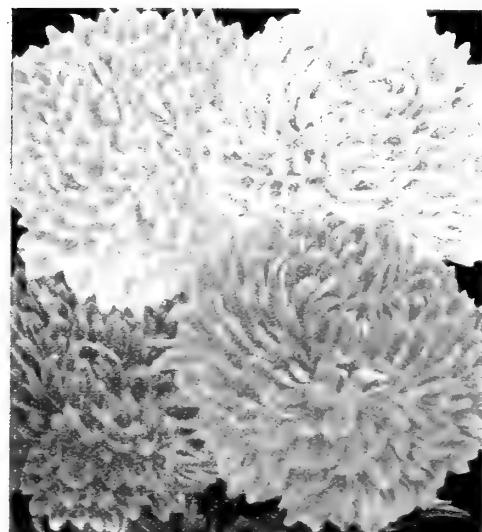

Aster Sunshine

DURING the late summer and early fall the garden is usually a riot of reds and yellows, so the asters in their dainty and distinct colors as well as their many attractive forms are a pleasing addition. The long stems make them desirable for cut flowers and the blooms last long in water. It should be remembered however in regard to Asters that good culture is essential in order to obtain an abundance of fine flowers. Care should be taken to plant Asters in new ground each year and the best results are obtainable if the ground is carefully prepared before sowing. They should have heavy, loamy soil and a sunny open situation with a liberal amount of lime and wood ashes together with bone meal. The plants should be cultivated frequently and tobacco stems are helpful if placed around the stems.

Dwarf Section, Up to 12 Inches

They are dwarf and bushy in habit and are covered with many bright and attractive flowers. In Europe they are extensively used and we might follow their example as these plants being dwarf do not suffer from storms and the flowers appear early.

Even more so with those who love flowers. If your space is limited and you desire to grow a variety of flowers in a small space you can accomplish this by buying the Pee-Wee Seed Collection. These are seeds of plants of compact growth and very free flowering and most attractive in color and form. These packages are small sized containing, in some instances, only 50 seeds where the regular sized packages contain several hundred seeds. Each variety will be in small, plain envelopes with name of variety plainly printed. All these small envelopes will be enclosed in an outside wrapper which will contain the cultural instructions which may be followed for all.

Vaughan's Giant Pansies

Vaughan's Improved Swiss Giants

3890 Vaughan's Improved Swiss Giant Pansies. The attractive bowl of pansies above was painted from nature by Miss Winifred Walker, the well-known English artist. The flowers were secured from one of our north shore estates where pansies are a specialty and represent the Improved Swiss Giant Strain and are about one-third natural size. Several years ago we discovered and introduced this variety which created a sensation at once. This year when abroad we selected the cream of several growers' strains and offer them under the Improved Strain.

The flowers are gigantic size, perfectly round, fine substance of flower and good form of plant and exhibit shades previously unknown in this family. They bloom early in the spring, continuing in flower all summer until late in fall. Pkt., 50c; $\frac{1}{16}$ oz., \$1.25; $\frac{1}{4}$ oz., \$4.00; 1 oz. \$15.00.

Schizanthus Vaughan's Excelsior Hybrids

Vaughan's Sweet Peas

Sweet Peas are among the seeds to be sown very early in the spring. They should go into the ground as soon as the soil can be worked, and should be planted six inches deep, being covered at first with only two inches of soil, the trench being filled as the plants grow. It is best to soak the seeds for several hours before they are planted. If this plan of planting early is followed, and if the Sweet Peas are kept mulched with peat moss or with lawn clippings or else watered abundantly, they will almost certainly give a fine crop of blooms.

Early and Long Season Spencer

A new race of Sweet Peas, having the large wavy flowers of the Spencer type, but flowering fully one month earlier, they also continue to flower for a much longer period. Excellent for greenhouse planting and also for outdoor sowing.

The most gorgeous annuals with a wonderful range of color. Extremely double flowers with long stems and good keeping qualities, make this old-fashioned flower a joy in the garden. If you plant but one annual, plant this. May be taken up when in full bloom and transplanted without any visible effect. Has no enemies, either insect or fungus.

DELPHINIUM (Perennial Larkspur)

Few plants are so handsome in the garden as the perennial Larkspurs. There are many species in cultivation, but the most important are the tall hybrids, of which there are many varieties with a wonderful range of color. They are valuable for their great variety in height, varying from 1 to 6 ft.; for their great variety in shades of color, varying from the palest lavender through every conceivable shade of blue to deep indigo. They thrive in almost any situation or soil and are easily increased, being perfectly hardy. A good, deep, rich soil will repay with larger and better flowers. Remove the flower before the seed pods form and they will flower later in season. The Butterfly Delphiniums are forms of Delphinium Chinese, height 2-3 ft. Though perfectly hardy perennials, they have the special merit of developing to full size the first year, when sown in frame in February or March. All three colors are large flowered.

Plants Marked X Suitable for Rock Garden

We recommend sowing perennial seeds in spring. Seed germinates better in the cool weather than in the heat of midsummer and the seedlings have an opportunity to develop into sturdy little plants by fall which permits them to winter-over more successfully. Make a seed-bed where the amount of light and water can be controlled. Transplant when large enough to rows in the garden and in the fall reset in permanent location where they are to flower the following year.

The majority of these perennials bloom the second year from seed although some like *Coreopsis* and *Gaillardia*, if sown early, bloom the first year. Some perennials are very slow and uneven of germination. Seed may lie in ground a year. This particularly applies to *Clematis*, *Phlox*, *Delphinium* *Zalil* and others. Perennials should be placed in clumps of three or five plants and should be left undisturbed for several years.

Order Plants
by name and on the separate order sheet provided for them. Give quantities desired in plain figures and write only one kind on each line.

Prices of Plants

The time involved in assembling long lists of plants when ordered one of a kind, compels us to charge proportionately higher for single plants; on the other hand we make the price of twelve and three-of-a-kind so attractive that it should induce our customers to buy at least three-of-a-kind.

Relative Prices Are as follows:

		3 supplied for	Each
Plants priced at	\$2.00\$0.65	\$0.25
	2.5085	.35
	3.50 1.00	.45
	4.00 1.25	.50
	4.50 1.35	.55
	5.00 1.50	.65

Plants by Parcel Post

If to be sent by parcel post add postage as follows: Single plants, 5c; 3 plants, 10c; 6 plants, 15c; 12 plants, 25c. We accept no responsibility for delays or conditions that may prove injurious to the contents.

Plants by Express

We recommend this mode of transit where quantities are over 18 to 24 plants. We pack carefully, but accept no responsibility for delays over which we have no control that may cause injury to the contents.

Order for Seeds

Vaughan's Hardy Phlox

(Phlox Decussata)

THIS is one of the most useful flowers for summer decorations, the colors varying from pure white to deep crimson. They are not at all particular as to soil, and are exceedingly hardy. To obtain good results it is wise to manure the soil well and give them a fairly open situation, and an occasional soaking of water during very dry weather. Once planted, they require no further attention for several years, but it is advisable to renew them about every fifth year.

The flowering period is from the early part of July

to the middle of September and they grow to heights varying from 1 to 3 and even 4 feet. If the first flower spikes are cut off as soon as over, and the plants are given a good soaking, a second crop of bloom extending until late in the fall may be expected.

Our list contains the finest of the new introductions. The colors are very beautiful and striking, and the individual flowers are in many cases twice and thrice the size of older varieties.

Vaughan's Dahlias

IN THE following we offer what we consider the best of the Foreign and American Dahlias. We will supply **Pot-Grown Plants** of the newer varieties and strong tubers of proper planting size as marked preceding the list of varieties. Pot plants we do not advise planting before **May 20th**. With good care and soil the pot plants make a good growth, brighter colored flowers and larger blooms. Please state if you want a substitute, should our supply of any variety become exhausted.

Four Outstanding Dahlias of Late Introduction

Offered only in pot plants, ready May 20th

BUCKEYE BRIDE. (Informal Decorative). A truly great pink Dahlia. It is of Geranium pink, a rare and beautiful shade. The flower is large, is always held at a correct angle on the stem, and the stems are always long and perfect. It keeps well when cut. The heavy foliage successfully resists sucking insects and mildew. The vigor is high and uniform. It is a good tuber maker and the tubers keep well. It is at the head of the Golden Rule class, receiving a rating of 94 which is the highest yet given any Dahlia and it made Derrill W. Hart's 1929 Roll of Honor. For beauty alone no other pink we have grown has equalled it. Added to this its sturdy qualities of growth, spotless foliage and its perfect habit comprise its great assets. **Plants, each \$5.00.**

MONMOUTH CHAMPION. (Formal Decorative). Winner of special award at Elizabeth N. J., and as best undisseeded seedling at Red Bank, N. J., where it defeated some of the top notchers; it instantly found favor with all who saw it by its great size and brilliant flame color. It is the only Dahlia we know in its color. **Plants, each \$5.00.**

ROBERT E. LEE. (Semi Cactus). Color bright luminous cardinal red; reflex lighter, not only a 1929 Roll of Honor Dahlia but at Camden, N. J., in the open to all class, it won as the best red or crimson over those grand prize winners, Elite Glory and Fort Monmouth. It is not only a brilliant glowing red, but it does not burn or fade. The flowers are carried from facing to upright on cane stiff stems. They are always full to the center. **Plants, each \$5.00.**

THOMAS A. EDISON. (Formal Decorative). This gorgeous new royal purple Dahlia has met with complete approval. The Staghorn petal formation, the dark green insect resistant foliage, the cane stiff stems and its thrifty growing habit of medium height leave nothing to be desired. Selected and named by permission of the famous electrical wizard. **Plants, each \$5.00.**

JANE COWL

PAUL NEYRON

Hardy Hybrid Perpetual Roses

Among garden lovers no hardy plants are so generally popular as the Hybrid Perpetuals, often called June Roses. Once established they are strong and hardy growers, bearing large globular flowers. While severe weather does not kill them, some protection in the way of a moderate covering of rotted straw, light manure or leaves is very advantageous, and necessary near and north of Chicago.

***FRAU KARL DRUSCHKI (WHITE AMERICAN BEAUTY).** Pure white, long, immense buds and perfectly double flowers. For bedding and for cutting it is the finest in its class.

***GEN. JACQUEMINOT.** Bright shining crimson, shapely buds, fragrant. The Jack Rose is noted for its good qualities.

***GEORG ARENDS.** Pointed buds and blooms of pure soft pink, delicately perfumed. Very vigorous grower with good foliage.

***J. B. CLARK.** Robust in growth, with clean heavy foliage. Flowers are large, deep scarlet, overlaid crimson.

ROSES' demand reasonably free watering, and frequent spraying with Hellebore and Bordeaux Mixture for insects and fungi will be found beneficial. They thrive best with application of manure water, and at least two applications of bone meal (two pounds per square yard) prior to blooming time. Roses in general do not like to be near trees and shrubs so are grown by themselves.

***MRS. JOHN LAING.** Very free-flowering, commencing to bloom early in the season and continues to bloom profusely until late autumn. A soft delicate pink with a satiny sheen; very fragrant, fully double.

***PAUL NEYRON.** This magnificent rose is by far the largest variety in cultivation. Very double and full, deep rose and delightfully fragrant.

***PERSIAN YELLOW (AUSTRIAN BRIAR).** The Hardy Yellow Rose of olden times. Deep golden yellow, semi-double and very hardy, suitable for planting in old-fashioned gardens and among shrubs.

***ULRICH BRUNNER.** A rose of beautiful form and finish, brilliant cherry-crimson. Vigorous, blooming continuously in the open.

Vaughan's Vigor Strawberry Plants

Strong Field Grown Plants, Shipped from Early Spring up to May 15th.

Our plants are grown under ideal conditions, in Michigan. They have been developed from selected plants. We know you will be pleased. Varieties below are up to date.

Write for pamphlet on Strawberry Culture.

All varieties listed are perfect sorts, are self-pollinating and will bear as well if set by themselves.

AROMA. Late. One of the most popular late varieties. Fruit large to very large; holds its size well throughout all the pickings. Berry is roundish, conical, smooth and perfect in form and of a beautiful bright glossy red in color; very firm and of high quality. Its rich aromatic flavor has suggested its name.

DR. BURRELL. Mid-season. The berries are large, delicious and beautifully formed. The surface of the berry is a deep glossy red. The meat is solid. If you are looking for a good dependable all-purpose variety you will make no mistake in planting Dr. Burrell. In manner of plant growth this variety closely resembles Senator Dunlap, but will produce more, bigger, and better berries and ripening as it does a few days earlier than Dunlap.

COOPER. Mid-season. The large size and the beautiful brilliant color of the berries immediately attracts the attention of every one, but the greatest feature of all is that peculiar mild, delicious flavor not found in any other Strawberry. Due to the wonderful vigor of the plant this variety is adaptable to a wider range of soils and climate than any other variety. The foliage is immense. The big broad leaves often growing a foot high. Cooper is strongly staminate and can be grown alone and is an ideal mate of any of the pistillate or imperfect varieties due to the long blooming season.

GIBSON. Medium early. Berries are large and regular in shape holding their size well to the end of the season. Color rich red. Flavor is neither sweet nor sour, but just right for canning. Extremely productive, in fact we know of no variety that will produce more quarts of berries per acre than the Gibson. It makes a strong, vigorous plant that withstands adverse conditions admirably. This variety seems to embody every requirement necessary for a profitable berry. We recommend it and know you will not make any mistake in planting Gibson.

PREMIER. Early. Berries are large, beautifully formed, red through and through; flavor delicious. A splendid shipper. The deep heavy rooting system makes the plant a strong drought resister, and it is especially adapted to any soil or climate, giving you a big crop of fancy berries which will sell at highest prices. Where extra fancy early fruit is wanted we advise this.

SENATOR DUNLAP. Mid-season. The fruit is dark red with glossy finish, shading to a deep scarlet on the underside. The meat is a bright red all through and exceedingly juicy. It succeeds everywhere and with everybody—the beginner, as well as with the veteran grower—but it should not be allowed to mat too thickly. For a medium sized productive early to mid-season berry you need not hesitate to plant Dunlap.

Price, on the above varieties, postpaid up to the 4th zone, 25 for 60c; 100 plants for \$1.75. Postpaid from 4th zone to 8th zone, 25 for 70c; 100 for \$2.00. By express, at buyer's expense, 100 for \$1.75; 500 for \$6.50; 1,000 for \$12.00. Write for prices on larger lots.

Three Leading Everbearing Varieties

CHAMPION. A strong, healthy, deep-rooted plant, very productive. Fruit similar to Dunlap in size, shape and color. A beautiful rich red color clear through, good quality and delicious flavor. In addition to the wonderful fall crop produced by the Champion they are the earliest to ripen in the spring.

PROGRESSIVE. Has long been the leading everbearing variety. It now has to take second place as the new Champion is superior in every respect. The Progressive is a tall, healthy grower, deep-rooted and entirely free from fungus diseases. Very productive, berries medium size, good quality and delicious flavor.

Price of above two varieties, 25 for \$1.00, 50 for \$1.65, 100 for \$2.75, postpaid to 4th zone; 250 for \$6.00, 500 for \$10.00, 1000 for \$18.00, by express.

MASTODON. The world's greatest everbearer because nothing like it was ever achieved before, producing nearly 6000 quarts per acre during August, September, October and November. In size, quality, flavor and appearance Mastodon heads the list. Unlike other everbearers, the plants of Mastodon are large, vigorous, heavily crowned and deep rooted.

Price, 25 for \$1.50; 50 for \$2.75, 100 for \$4.00, postpaid to 4th zone; 250 for \$8.00, 500 for \$15.00, 1000 for \$27.50, by express.

Garden Chrysanthemums

WE are all familiar through flower shows with the surpassing color-range of the chrysanthemum family, and its interesting variety of form, from the button pompons, the anemone type and singles, to the giant double mums, largest of cultivated flowers.

Could all these glories be transported to our gardens, the chrysanthemum would have few rivals for the honor of being our finest garden flower. Experts assure us that all varieties are sufficiently hardy to survive in gardens, with proper protection; but the limiting factor in selecting outdoor sorts is time of flowering.

Few varieties bloom early enough to escape the first hard freeze in latitudes where this comes before mid-November. Since most of our customers live in such latitudes we have discarded from our list all except the earliest flowering, which are described below. We shall add to this list as rapidly as new early flowering sorts are discovered or developed.

All chrysanthemums need the protection of a heavy mulch and they are benefited by being annually divided in the spring. Winter damage is chiefly from heaving. The clumps grow on the outside and grow old in the center; and frost action lifts their shallow roots. If each spring one divides the roots, discarding the inside portion and planting the younger growth firmly in new locations, the stock will be multiplied and earlier and more vigorous flowers will result.

Sturdy plants, pot grown in our own greenhouses, F.O.B. Western Springs, Ill. We recommend parcel post shipment; weight, 6 ounces per plant. Price, 3 for 85c; doz., \$2.50; 100, \$15.00.

Chrysanthemums that would flower successfully in the open garden have been wanted a long time, and in the following we offer a set that will furnish an abundance of flowers from August until heavy frost. They grow 2 to 4 feet high, in any good garden soil. Sturdy pot grown plants F. O. B. our Greenhouses, Western Springs, Illinois. We recommend parcels post shipment; shipping weight, 6 ounces each plant. Price, 3 for 85c; doz., \$2.50; per 100, \$15.00.

ACER

Palmatum Atropurpureum (Red-Leaved Japanese Maple). 6-8'. Very striking as a specimen tree or small shrub on the lawn. The foliage is red in Spring, later changing to an attractive dark bronzy purple. The plants we offer are of the true red variety. 18 to 24 in., \$6.50; 24 to 30 in., \$7.50.

Platanoides Globosum (Globe Norway Maple). An excellent form of the Norway Maple for lawn and formal effects. Clean, straight stems; branched at top forming a globe-shaped head. 6 ft. stems, \$5.00.

AZALEA

The Azaleas are among the showiest of ornamental shrubs, blooming in May and June. They thrive in moist, well drained, acid soils, and do not like lime. They should be planted in partial shade and kept mulched, preferably with peat moss. We advise planting only in Spring.

Mollis (Chinese Azalea). 3-4'. One of the most glorious of the Azaleas, with flowers of marvelous shades of yellow, orange, lemon, salmon, and terra cotta. It is of dwarf, compact growth with attractive foliage and is unexcelled for planting in front of Evergreens. 15 to 18 in., balled and burlapped, \$3.50; 18 to 24 in., balled and burlapped, \$4.50.

BERBERIS

Thunbergi Atropurpurea (New Red-leaved Japanese Barberry). 4'. Similar in all respects to the green-leaved Japanese Barberry which is so popular, but the foliage is of a rich, lustrous, bronzy red, similar to the richest red-leaved Japanese Maples. Instead of fading as the season advances, this new Barberry becomes more brilliant throughout the summer, and in the fall changes to vivid orange, scarlet, and red shades, more brilliant than in the ordinary Japanese Barberry. It bears the same scarlet berries common to the type, which remain on the plant the entire winter. It should be planted in full sun to develop its coloring. 1-yr., each 75c; per 10, \$6.50; per 100, \$60.00; 2-yr., each, \$1.00; per 10, \$9.00; per 100, \$80.00. We furnish 25 of a size at the 100 rate.

COTONEASTER

This desirable class of shrubs, which has white or pinkish flowers borne in clusters along the branches during May and June, is valued especially for the rich autumnal coloring of their leaves, and for their conspicuous berries which brighten the fall and early winter. Plant in any well-drained limed soil, avoiding shade or moist situations. The varieties we offer are listed among the most valuable at the Morton Arboretum where they have all proved hardy.

Dielsiana (Diels Cotoneaster). 6-10'. A distinct variety of loose, semi-erect growth, but with graceful drooping habit. Small oval leaves and masses of red berries in fall. 2 to 3 ft., balled and burlapped, \$1.50.

Divaricata (Spreading Cotoneaster). 5-6'. One of the best of the species, especially prized for its dark scarlet fruits which last until late in the autumn. It forms a wide-branched, densely twiggy bush from 5 to 6 ft. tall and much more in diameter. The small, oval, dark green leaves turn a brilliant shade of crimson before they fall. 2 to 3 ft., balled and burlapped, \$2.00; per 10, \$17.50; 3 to 4 ft., balled and burlapped, \$2.50; per 10, \$20.00; 4-in. pots, \$1.00.

Horizontalis (Rock Cotoneaster). 1-1½'. "Deservedly the most popular of the red-fruited varieties," says E. H. Wilson of the Arnold Arboretum. A dwarf shrub with densely spreading horizontal branches almost prostrate. On account of its habit, is much appreciated in rockeries and the front of borders, to display its crimsoning leaves and scarlet fruits deep into winter. 4-in. pots, \$1.00; 15 to 18 in., balled and burlapped, \$2.25.

Racemiflora Soongaria. 6-10'. One of the most beautiful and best of the genus. Forms a broad rounded bush from 10 to 12 feet high and more in diameter; gray-green foliage. In September, each long graceful branch is completely covered with brilliant coral-red fruit. 2 to 3 ft., balled and burlapped, \$2.00; per 10, \$17.50.

DAPHNE

Cneorum (Rose Daphne). 1'. One of the loveliest of all plants and a gem for the rock garden or for edging borders. A dwarf evergreen shrub of trailing habit, with leaves of dark glossy green, glaucous beneath. Small, tubular, rose-pink flowers of spicy fragrance are borne in clusters in May and again in late September. Does best in sun in a well-drained, poor gravelly soil. In cold climates the plants should be protected during winter. 8 to 10 in., balled and burlapped, \$1.50 each; per 10, \$14.00; 10 to 12 in., balled and burlapped, \$2.00; per 10, \$17.50.

CRATAEGUS

Oxyacantha Splendens (Paul's Double Scarlet Hawthorn). 12-15'. The most beautiful and showy of the double-flowering thorns, with lovely blossoms of bright scarlet color, large, full and very double. It forms a small tree or large shrub and makes a fine specimen for the lawn. 3 to 4 ft., \$1.75; 4 to 5 ft., \$2.50.

EUONYMUS

Alatus Compacta. A very bushy, compact form of the Winged Euonymus that is especially attractive in the fall when the foliage turns an intense crimson, and the whole bush resembles a ball of fire. It is one of our finest shrubs for growing in shady places, for specimen plantings, or for formal effects as it may be kept trimmed to the size and height desired. The picture shows the natural habit of the shrub after ten or more years growth without pruning. 12 to 18 in., \$1.00; per 10, \$9.00; 18 to 24 in., \$1.50; per 10, \$12.50.

HAMAMELIS

Vernalis (Vernal or Winter-Blooming Witch-hazel). 5-8'. Blossoms as early as January and will continue to bloom for a long time, opening during the mild weather and closing when the temperature drops. The flowers come in greatest profusion, have a delightful spicy fragrance, and vary in color from bright yellow to shades of old gold, reddish brown and maroon. The shrub grows from 5 to 8 feet tall and frequently gets to be as wide as tall. It gives the best results when planted in a sheltered place well open to the winter sun. Ought to be planted in every garden for its early flowering quality and abundance of bloom. 2 to 3 ft., \$1.50; 3 to 4 ft., \$2.00.

JAPANESE FLOWERING CHERRIES

Probably no group of small-flowering trees attract more attention than the Japanese Cherries with their rose-like flowers. Thousands visit the large collection at Washington, D.C., annually. We are glad to be able to offer the following good varieties:

KOLKWITZIA

Amabilis (Beautybush). 6-8'. There are few flowering shrubs which can surpass this for beauty of form and flower. Its trumpet-shaped pink flowers, deep pink without, stained with yellow-brown on the lower throat and lip, are most freely produced, which fact combined with its graceful contour, makes the plant a striking object in the shrubbery border. Grows from 6 to 8 feet tall and fully that wide. Absolutely hardy and reliable and makes a wonderful showing in June. One of the E. H. Wilson's and the Arnold Arboretum's choicest new introductions from China. 18 to 24 in., extra bushy, balled and burlapped, \$2.00; per 10, \$17.50; 18 to 24 in., not balled and burlapped, \$1.50; per 10, \$12.50; 2 to 3 ft., balled and burlapped, \$2.50; 2 to 3 ft., not balled and burlapped, \$2.00.

Vaughan's Hardy Climbing Vines

Flower lovers and gardeners know how indispensable are Vines and Climbers for beautifying one's place, especially near the house. Plant Clematis, Climbing Roses and Honeysuckles about the front porches with perhaps a vine or two of the Chinese Wisteria to climb as high as the roof. Always prettier when ivy-clad. Then going around to the rear of the house, if you have a trellis to cover, or want a screen for certain buildings, get more Honeysuckle and if you need something to cover a large space quickly, try the Kudzu vine; the Trumpet Creeper is also good. The following are the best climbers for arbors, arches, trellises, porches, etc. Remember how pretty an arbor can be. Even grapevines make a good covering.

WISTERIA

AKEBIA Quinata (Five-leaf Akebia)

A beautiful hardy Japanese vine, with unique foliage and chocolate-purple flowers of delightful fragrance in large clusters. The foliage is never attacked by insects, and is distinctly ornamental. Prefers a sunny situation. 2-yr., 75c.

AMPELOPSIS

Engelmanii (Engelman's Ivy). One of the hardiest, best and quickest growing climbers for the North and Northwest. Quite similar to the Virginia Creeper, but vastly superior to it, the foliage being cleaner, of greater substance and not turning yellow during the early fall, and almost perfectly free from insects. Leaves color beautifully in the fall. 2-yr., 50c; per 10, \$3.50.

Heterophylla (Porcelain A.). A handsome and refined climbing plant for use where a quick-growing, densely covered vine is desired. It is attractive all summer because of its ornamental, heart-shaped leaves, prettily incised, but is charming in autumn when its crop of berries turn a bright turquoise blue. 3-yr., 75c; per 10, \$6.00.

Quinquifolia (Virginia Creeper or Woodbine). Luxuriant in growth, with handsome foliage turning to bright crimson in the fall. Very hardy vine for covering old tree trunks, walls or fences. 2-yr., 50c; per 10, \$3.50.

AMPELOPSIS Tricuspidata (Veitchii)

(Japanese Creeper or Boston Ivy.)

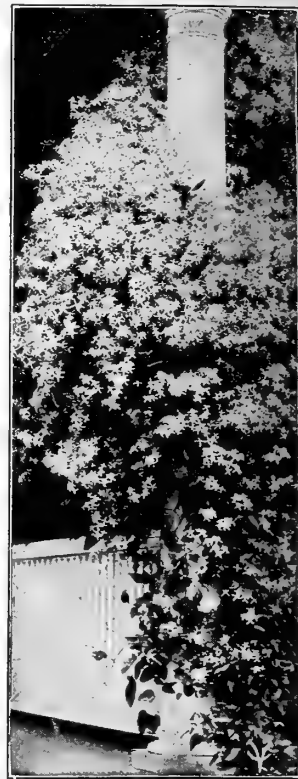

The grandest hardy climbing vine in existence for covering houses, churches, schools, etc. Its glossy, ivy leaves overlap each other, and its long, delicate young shoots stretch up the walls with free and rapid growth. The tendrils at nearly every point cling firmly to the smoothest surface of rock or brick. 2-yr., 65c; per 10, \$5.00; 3-year, 75c; per 10, \$6.50; pot-grown, 85c; per 10, \$7.50.

ARISTOLOCHIA Sipho (Dutchman's Pipe)

A vigorous and rapid-growing climber, bearing striking brownish colored flowers, resembling a miniature pipe in shape. Its large, rich, glossy, dark green, heart-shaped leaves give a tropical foliage effect and produce a splendid shade. It is very hardy and adaptable to practically every situation, thriving in any soil, in sun or shade. 2-yr., \$1.00; pot-grown, \$1.25.

BIGNONIA Radicans (Trumpet Creeper)

A robust tall climber with great leathery trumpet-shaped flowers of brilliant orange-scarlet which last a long time in the summer. A very rapid and hardy grower. Useful for covering unsightly places, stumps, or wherever a showy flowering vine is desired. 2-yr., 75c; per 10, \$6.00.

CLEMATIS PANICULATA

CELASTRUS (Bittersweet)

Scandens (American Bittersweet). A native climbing or twining plant with handsome large leaves; yellow flowers in May and June and clusters of ornamental orange-capsuled fruit in autumn. One of the most desirable climbers for shade. Strong 2-yr. vines, each, 75c; 3-yr., 90c.

CLEMATIS PANICULATA

(Sweet Autumn Clematis)

The finest small-flowered Clematis extant. A wonderfully rapid grower, quickly covering trellises, arbors, etc. The flowers are pure white, deliciously fragrant and produced with the greatest freedom. It flowers in September when few other vines are in bloom. Easiest to grow and most popular of all the small-flowered vines. 2-yr., 60c; per 10, \$5.00; 3-yr., 70c; per 10, \$6.00; pot-grown, 75c; per 10, \$6.50.

LARGE-FLOWERING CLEMATIS

The Large-Flowered Clematis are the most beautiful of all our flowering vines. They should be pruned early in spring and require rich, deep soil, perfect drainage, abundance of water and should be planted with the crowns three inches beneath the surface of the soil.

Henryi. Strong grower, flowers always eight-petaled, 4 to 6 inches in diameter and pure white. Very hardy. 2-yr., \$1.00.

Jackmanii. This variety, with its strong, healthy growth, hardy nature and rich, deep velvety purple flowers, is the most satisfactory of its class. Blooms with astonishing profusion on shoots of the present season. 2-yr., \$1.25.

Mad. Edward Andre. Flowers large, of a very beautiful bright velvety red, very free-flowering, and continuous bloomer. 2-yr., \$1.00.

LONICERA (Honeysuckle).

We cannot speak too highly of this class, for covering arbors, fences, pergolas, verandas, etc. They are the best vines for ground planting under trees, and if used on terraces or embankments will prevent washing. All are perfectly hardy and improve in beauty each year.

POLYGONUM Auberti (Silver Lace Vine)

The plant is of strong, vigorous growth, attaining a height of 25 feet or more, producing through the summer and fall great foamy sprays of white flowers that turn rose-colored as they begin to fade, and the combination of white and rose makes an exceedingly pretty picture. This vine does well in the East, in the Middle West and the West. 2-yr., \$1.00; per 10, \$8.00. Pot-grown after May 1st.

Fertilizers are Needed to Make Lawns Grow

Fine lawn grasses require rich soil in which to do their best. When properly fed they will grow so luxuriantly as to crowd out weeds. Grass which is constantly cut makes a heavy drain on the food content of soil, and unless this is annually renewed, a lawn will deteriorate. On page 101 are listed fertilizers of all types which are recommended for lawns. Our free booklet "How to Make a Lawn" gives definite instructions on the use of fertilizers.

Nu Green

A grass disinfectant for brown patch prevention and control. 3 oz. tin, 50c; lb., \$2.00; 5 lbs., \$9.00; 25 lb. pail, \$37.50; 100 lb. drum, \$145.00. Write us for booklet.

Seed of the Bent Grasses

EUROPEAN MIXED BENT (so-called "Creeping Bent") is a natural mixture of Bents including true Creeping Bent, Velvet Bent, and a large percentage of Rhode Island Bent. It has been in high favor as a putting green grass.

The important advantage of the Bent Grasses on lawns is that they like acid soils and can be fed with acid reacting fertilizers, such as Ammonium sulphate, the constant use of which discourages weeds.

These seeds are somewhat to be preferred to the Creeping Bent Stolons for lawn purposes (but not for putting greens), because they do not grow so rapidly and the average home-owner can keep up with mowing. Seed at the rate of 3 to 4 lbs. per 1,000 sq. ft.

European Mixed Bent ("Creeping Bent Grass"), ¼ lb., 50c; ½ lb., 90c; 1 lb., \$1.75; 2 lbs., \$3.50; 3 lbs., \$5.20; 5 lbs., \$8.50; 10 lbs., \$16.50; 15 lbs., \$24.50; 25 lbs., \$40.00.

RHODE ISLAND BENT GRASS has been neglected as a lawn grass. It makes a fine close turf of excellent color and adapts itself readily to any soils, particularly acid soils. This grass also makes good putting green turf.

Rhode Island or Colonial Bent, ¼ lb., 55c; ½ lb., \$1.00; 1 lb., \$1.95; 2 lbs., \$3.90; 3 lbs., \$5.80; 5 lbs., \$9.50; 10 lbs., \$18.50; 15 lbs., \$26.75; 25 lbs., \$42.50

No. 12 Planet Jr. Double and Single Wheel Hoe

A combination of Double and Single Wheel Hoe that has become the most popular in this and other countries. As a double wheel hoe the row can be straddled and worked both sides until the plants are 20 inches high. Then as a double or single wheel hoe, the crops can be cultivated both sides of the row and in the middle, thoroughly and quickly. Can also be used as a single wheel hoe wherever desired. The cultivating attachments permit one to do all the necessary plowing, opening and closing of furrows, hilling of plants and all the garden cultivation required. The side hoes break up the crust, kill the weeds, and pulverize the soil, which prevents evaporation of the required moisture. Rakes, Disc Hoes and other attachments can be added at any time. See Page 80 of the Planet Jr. catalog.

The hopper holds four pounds of onion seed. It is thoroughly substantial and accurate in planting. Its simplicity, both as a seeder and as a wheel hoe, makes the combination satisfactory. Holds 2½ qts. Weight, complete, 61 lbs. Equipment: One pair of 6-inch hoes; Four cultivator teeth; One pair plows; Two leaf guards; One marker. All oil tempered.

No. 3 and No. 5 Planet Jr. Hill and Drill Seeders

These seeders are undoubtedly the most favored by market gardeners and other large commercial growers. They are identical in operation and construction, the only difference being that the No. 3 has a 15-inch drive-wheel and holds 3 quarts of seed, while the No. 5 has a 16½-inch drive-wheel and holds 5 quarts of seed. We recommend the No. 5 to very large market growers who have a considerable acreage to plant.

The design of the No. 3 and No 5 drills is such that the push or thrust of the operator on the handles is delivered to the axle of the main wheel in a line parallel to the soil's surface. This means easy work, and also even sowing. No. 3, 15-in. steel driving wheel. Holds 3 qts. Weight, packed, 49 lbs. Net, 33 lbs. No. 5, 16½-in. steel driving wheel. Holds 5 quarts. "SUCCESS" SELF-WATERING FLOWER BOXES

The "Success" Window Boxes are substantially constructed of galvanized sheet steel, lock seamed and soldered watertight. A water pocket extends the full length of boxes, from which tubes lead into the box itself. This pocket with the tubes serve the following purposes, i. e.: Provides for watering the roots from below, allowing them to take up moisture as required; provides air circulation and ventilation, keeping the soil sweet and healthy; provides a perfect drainage should the plants be excessively watered by heavy rains or other causes. In fact, it serves as an accurate gauge as to the condition of the soil at all times. The boxes are finished in an attractive shade of green enamel and will prove an addition to any home, hotel or office building. Since they are watertight, they are especially adapted for inside use, serving to beautify the exterior during the summer and adding a touch of brightness during the winter.

How to Order

We respectfully request customers to follow these instructions and to fill out order sheets carefully.

Early Orders Kindly send in your order as soon as convenient after receiving catalogue. Our rush season comes in the months of March and April. Orders received earliest secure the promptest shipment and from our complete stocks.

Order Sheets Use the order sheets accompanying this catalogue. One for Seeds, Bulbs and Garden Sundries, the other for Trees, Plants and other Nursery Stock. Please fill in all particulars carefully and distinctly with your **Zone Number** and keep a copy of your order.

Seed and Bulb Orders should have the quantity required written distinctly in the column provided for same with prices. Flower Seeds may be ordered by name, or by the marginal number.

Plant and Tree Orders should be written on the order sheet provided for these, and should state quantity, size or age required of each variety, with the price for same carried out. No plants, trees or shrubs sent C. O. D.

C. O. D. Orders. Owing to the extra cost of collecting we will not fill any C. O. D. mail order for less than \$5.00. We do not prepay any C. O. D. orders and will not ship plants, trees, shrubs or other perishable goods C. O. D.

Mistakes These will happen in spite of all care. Write us at once with copy of original order if possible, and mistakes will be promptly rectified. Please do not return goods until you hear from us.

Order Trees, Shrubs and Hardy Vines, if possible, before end of March—it gives us more time for selecting, packing and shipping when the planting season opens up. Early orders receive first attention.

All Trees Shrubs and Hardy Plants are shipped as soon as weather permits. Tender plants from Greenhouses for bedding, etc., are shipped after frosts are past, usually after May 15th. (Southern shipments any time after February.) State plainly date and manner of shipping you wish.

Parcel Post **Fourth Class Mail Matter**, which includes seeds, plants, bulbs, roots, books, tools, insecticides (that are non-poisonous), odorless fertilizers and requisites may be forwarded by domestic parcel post within the United States. We recommend this mode of conveyance for all seeds and bulbs, where weight permits, also implements, insecticides, etc., where we give mailable weights throughout the catalogue.

PLEASE MARK ZONE NUMBER in the space provided for same on the top right-hand corner of all orders which you send to us.

Express Shipments General orders for garden seeds, where peas, beans and corn form a large proportion, are best sent this way. Orders over **FIVE POUNDS** (5 lbs.) weight going to **5th Zone** and beyond, will travel cheaper by express than by parcel post.

Send Remittance by New York or Chicago draft, registered letters or postoffice or express money orders. Do not send loose currency or stamps in letter, unless registered. Registered letters can be sent from any postoffice, and your receipt sent you by return mail if demanded by you, by which you know it has reached us. Make money orders payable to "Vaughan's Seed Store." (Mark your Zone Number on order.)

Our Terms Customers not having an account are requested to send cash with order or furnish reference. We prefer not to send C. O. D., but if wanted by that method, customers should enclose one-fourth of the amount in remittance with order. No trees, plants or other perishable stock and no order less than \$5.00 are sent C. O. Our Responsibility

It is so manifestly impossible for a seller of any perishable article to be responsible for what may happen to it after it leaves his hand, especially one like seeds, which are planted in the ground under varying conditions of soil and climate, that we, in common with all American seed houses,

disclaim responsibility as to the crop which may be raised from seeds which we sell.

At the same time, in case of any failure to secure proper results caused from some inherent fault in the seeds themselves, Vaughan's Seed Store accepts responsibility, not for crop, but to the extent of the amount of money paid for the seeds, if we are immediately advised in case of any failure.

We wish it understood that all our stocks are sold under the following conditions:

We Do Not Warrant in any way, expressed or implied, the contents or the description, purity, productiveness or any other matter of any seeds, bulbs, plants, shrubs or trees sold by us, and we will not be in any way responsible for the crop. If the purchaser does not accept these goods on above terms, no sale is made thereof, and he must return them at once, and money will be refunded. Subject to above conditions, we make this sale at the moderate prices at which we sell our goods.

E. W. Kohlenberg, Supt.
Vaughan's Greenhouses

Here are the plants which he especially recommends to our customers. Some of them are new and some are fine varieties which had been lost sight of, but all are excellent subjects for the garden:

This is a new perpetual flowering *Dianthus* obtained by crossing *Allwoodii* and *Atrococcineus*. Habit of growth similar to *Dianthus Atro-Coccineus* (The everblooming Sweet William). Height, 2 feet; blooms all summer. Flowers in a charming mixture of reds, pinks and white on long stems. Ideal as a cut flower, a bedding plant, or to brighten the Perennial border. Price, 3 for \$1.00; doz. \$3.50; 100. \$20.00.

This is a selected type of the English bedding strain known as Coltness Gem. On compact bushy plants two feet high are borne many single blooms two to four inches in diameter of a brilliant geranium red with a heavy cluster of deep yellow stamens in the center. Beginning to bloom in July it continues until frost constantly improving in quality and number. Plants in our trials bear as high as thirty perfect blooms at one time. A good cutflower and good keeper. Pot plants only ready in May. Each, 75¢; doz., \$8.00; per 100, \$35.00.

This tall growing Double Sunflower with deep yellow blooms looks just like a large *Chrysanthemum* or a *Dahlia*. Height, 4 ft. Profuse bloomer, excellent for background or border. An exceptionally good cut flower and very valuable because it blooms in August when there are no other yellow flowers. It does not seem to be affected by hot, dry weather. Price, 3 for \$1.50; doz., \$5.00; 100, \$35.00.

Double Hardy Primrose 'Lavender Beauty.' A new variety of the Veris type, which has proved hardy in Chicago locality. Very double lilac blooms on individual stems in May. An ideal rock garden or border plant. It prefers partial shade, slight winter protection, and if left undisturbed will increase in size and beauty. Exhibited last year at the Chicago Spring Flower Show, it attracted much attention. Price, 3 for \$1.50; doz., \$5.00; 100, \$35.00.

A new and valuable Russian species. Thrives in sun or partial shade and is adapted for rock garden or perennial border. The foliage is interesting, consisting of many large tough heart-shaped leaves clustering thickly over the plant, making a neat cluster, twelve inches or more in diameter until late fall. It rarely grows over twelve inches tall and in spring produces many charming blue flowers closely resembling Forget-Me-Nots. Price. 3 for \$1.50; doz., \$5.00; 100, \$35.00.

I consider this the best of the Veronica species. Stout stems two feet tall with tough herbaceous foliage and bearing numerous spikes of rich deep blue flowers during August and September. We cannot speak too highly of this variety. It thrives under any conditions, is compact in growth, blooms later than the other Veronicas, and is a good cut flower. Price, 3 for \$1.50; doz., \$5.00; 100, \$35.00."

You Can Win at the Flower Shows with These Blue Ribbon Glads

EDWARD GOLDENSTEIN, manager of our bulb department, picked them out as the best exhibition varieties he has seen at the big shows.

Every garden lover wants to win in his local flower show. There is a late summer or fall show in almost every American community nowadays. Gladioli and dahlias make up the big competitive classes. A blue ribbon in the gladiolus section is something of which to be proud.

Good exhibition varieties will bring the ribbons. They must be well grown, of course, but the same amount of care put on varieties less suited to the show room will not win.

"I have traveled over much of the United States the last two years visiting gladiolus fields and shows, judging many of the latter," said Edward Goldenstein, manager of Vaughan's Seed Store bulb department. "If I am asked to pick out the varieties (excepting of course the very newest and highest priced ones) which consistently win blue ribbons in their respective color classes my choice includes the following:

"William H. Phipps, the giant pink which is undoubtedly the finest exhibition variety known. Its beautiful florets are perfectly placed, and open all together, so that it makes a plume of delicate color which nothing can surpass. I have never known a good specimen of Phipps to be beaten in its color class.

"Mrs. Leon Douglas, darker than Phipps, approaching an orange, will average larger and taller than any other variety, and while not as well formed as Phipps is one of the outstanding exhibition blooms.

"Pfitzer's Triumph is a giant flower, of brilliant scarlet, with huge florets of typical Pfitzer form, well placed. A representative spike will always win against other varieties in its class.

"Minuet is the newest I have chosen; it is without a rival in the pale lavender class, and one of the most beautiful of all glads of whatever color.

"Dr. Bennett is tall, straight, of warm red coloring, with perfectly placed florets, a variety which is seldom beaten.

"Golden Measure is the best moderate priced large flowered yellow and often wins against the high priced newer introductions. It is hard to beat a good specimen of Golden Measure in size, form or color.

"Kalamazoo is classed as a purple-violet and has long been a leader in its class. It is seldom beaten.

"Baron J. Hulot is a blue violet, of proved merit, which can be beaten only by the still expensive newer violets whose price is kept up by the fact that this color is a poor propagator.

"Vaughan's White is without a rival in its class for size, pure coloring, the placing of its florets and their willingness to open together.

"Any garden owner who has these varieties will be a contender for sweepstakes honors in any flower show in the world. We have built up a stock of them which enables us to make a most attractive price.

"We offer both first and second size bulbs. Experienced growers usually plant both sizes. Second size bulbs bear excellent flowers often as good as first size, but take longer to bloom. By planting both sizes one has both early and late flowers."

Vaughan's Blue Ribbon Collection of Gladioli.

These nine varieties were chosen by Edward Goldenstein, manager of our bulb department, as the most consistent blue ribbon winners at the flower shows. They are illustrated in color on the back cover of our 1931 catalogue.

Vaughan's Glorious Gladioli

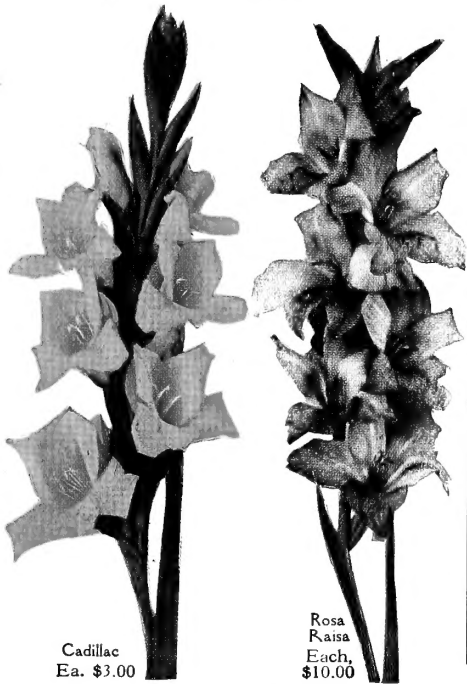

VAUGHAN'S Seed Store is the largest grower of gladiolus bulbs in the United States. On our farms in Michigan and Illinois, we devote more than 40 acres of land to gladiolus culture, trying out every new variety of merit introduced the world over, as well as conducting continuous hybridizing operations with a trial ground of five acres devoted to seedling varieties for our own introduction.

MODERN Gladioli have won acceptance as garden flowers. Long supreme as a summer cut-flower, the improved varieties of this race now offer material for the garden picture too beautiful to be ignored. Varieties growing four to five feet tall, with giant flowers lasting one to two weeks, make it possible to provide a needed color effect in the border at a time when, but for this adaptable flower, interest would be missing. In addition to the varieties which are listed here, many illustrated in color, we grow in our own farms many other named varieties. A complete list with prices on bulbs of various sizes, will be sent upon request.

Something New

Vaughan's Unnamed Seedling Blend

Seedling gladioli are new varieties developed by our hybridizer and grown in our trial grounds. Of the thousands thus originated, a few are chosen for introduction each year. This choice is a matter of opinion; many of these not chosen you might rate as more beautiful than any now known in commerce. Others are similar to the newest and most expensive varieties, too similar to be introduced as separate varieties. All these unnamed, unintroductory, new gladioli are put into this mixture, which thus becomes a treasure-trove, in which you may find a fortune. Doz., \$2.00.

A mixture of "smoky" varieties, this name having been adopted by the American Gladiolus Society for a type of coloring which consists of a soft blend of many tones, in misty effects, for which the vocabulary of color provides no exact names.
